

Choice Neighborhoods Initiative Market Study and Feasibility Analysis: **Desoto Bass Courts and Hilltop Homes Dayton, Montgomery County, Ohio** For: Ms. Kiya Patrick **Greater Dayton Premier Management** 400 Wayne Avenue Dayton, Ohio 45410

Effective Date: June 21, 2017
Job Reference Number: 14015AM

Phone: (614) 224-4300 Fax: (614) 225-9505 1310 Dublin Rd., Columbus, Ohio 43215 VSInsights.com

Market Study Certification

This certifies that David Nguyen, Daniel Swartz and Lewis Burrowes, employees of Vogt Strategic Insights (VSI), personally inspected the area, including competing properties and the subject sites/neighborhood in Dayton, Montgomery County, Ohio. Further, the information contained in this report is true and accurate as of June 21, 2017.

This market analysis and feasibility study has been prepared by VSI, a member in good standing of the National Council of Housing Market Analysts (NCHMA). This study has been prepared in conformance with the standards adopted by NCHMA for the market analysis industry where applicable in this downtown housing needs assessment. The NCHMA market study standards focus on site-specific market studies, rather than larger-scale housing needs assessments. However, the general themes and concepts have been applied to this analysis. In addition, this assessment does have a site neighborhood (and two existing Public Housing projects) that is the focal geographic location of this report. These standards include the Standard Definitions of Key Terms Used in Market Studies for Affordable Housing Projects and Model Content Standards for the Content of Market Studies for Affordable Housing Projects. These standards are designed to enhance the quality of market studies and to make them easier to prepare, understand and use by market analysts and by the end users. These standards are voluntary only and no legal responsibility regarding their use is assumed by the National Council of Housing Market Analysts.

Vogt Strategic Insights is duly qualified and experienced in providing market analyses for rental housing. The company's principals participate in the National Council of Housing Market Analysts (NCHMA) educational and information sharing programs to maintain the highest professional standards and state-of-the-art knowledge. Vogt Strategic Insights is an independent market analyst. No principal or employee of VSI has any financial interest whatsoever in the development for which this analysis has been undertaken.

I. Introduction

<u>Purpose</u>

The purpose of this market study and feasibility analysis prepared for the Greater Dayton Premier Management (GDPM), formerly known as the Dayton Metropolitan Housing Authority, is to evaluate the housing characteristics and trends impacting the neighborhoods on the west side of Dayton, surrounding the existing Public Housing communities, Desoto Bass Courts and Hilltop Homes. This assessment evaluates the market dynamics relating to the potential redevelopment of this neighborhood.

This market analysis and feasibility study focuses on support for rental and for-sale housing at the two properties, and considers product types that may appeal to households purchasing or renting a home in those neighborhoods. This assessment provides information that can be used to determine the scale, unit sizes, price points, etc. for new housing projects in an effort to help direct overall neighborhood revitalization goals of GDPM. In addition, an evaluation of non-housing commercial/retail space has also been conducted. The following map illustrates the location of the Desoto Bass Courts and Hilltop Homes, and their proximity to each other on the west side of Dayton.

This report evaluates and identifies the strengths and challenges for housing redevelopment in the western portion of Dayton, Ohio. Vogt Strategic Insights (VSI) has established a Primary Market Area (PMA) to evaluate development potential. For comparison purposes, we have evaluated and compared the demographic, socioeconomic, housing and economic characteristics of the Site PMA on the west side of Dayton, as well as the city of Dayton as a whole, and the state of Ohio.

This analysis was initiated by and has been prepared for Kiya Patrick, senior manager of planning and development with GDPM.

<u>Methodologies</u>

The following process and methodologies have been used by VSI during the evaluation of the Dayton area and the completion of this market analysis and feasibility study:

Site Evaluation – The two subject sites, Desoto Bass Courts and Hilltop Homes, and their subject site neighborhood has been evaluated in detail. Surrounding land uses, ingress/egress, visibility, employment opportunities, transportation, nuisances and community services were analyzed. Photographs of the site neighborhood and surrounding roadway streetscapes are provided in this housing needs and feasibility analysis.

VSI has evaluated the housing development potential in the Dayton site neighborhood area. An in-person evaluation has been conducted and includes an assessment of essential neighborhood amenities and services to indicate the existing retail and commercial areas, public safety services, public transportation, financial institutions, hospitals/medical centers, employment centers, schools and recreational/entertainment activities. A detailed map showing the location of area community amenities/services has been prepared.

Primary Market Area (PMA) – The foundation of the analysis is based on the establishment of the Primary Market Area (PMA), or target area. The PMA is generally described as the smallest geographic area expected to generate most of the support for a proposed project, where the community services that site residents will likely utilize are located and/or where comparable housing alternatives exist. Note that PMAs are not defined by radius. The market area for this target market study was determined during the course of this analysis. This PMA, defined later in this analysis, has been based on a variety of factors including, but not limited to:

- A detailed demographic and socioeconomic evaluation
- Interviews with area planners, realtors, property managers and other individuals who are familiar with area growth patterns
- A drive-time analysis of the area
- Personal observations of the market analysts
- An in-person evaluation of existing housing supply characteristics and trends
- Previous research conducted in Dayton by VSI for numerous site-specific housing developments

Demographic, Socioeconomic and Economic Context – The study details and analyzes the following data and corresponding trends as they relate to the potential for residential development in the Primary Market Area. Tables detailing various trends are found within the report accompanied by relevant analysis, as well as an addendum document illustrating statistics in chart and table formats.

Population Characteristics and Trends

Total population trends (historic, current and projections) Age levels

Household Demographic Characteristics

Age levels, including senior and non-senior households Household trends (historic, current and projections) Persons per household

Socioeconomic Aspects

Distribution of households by tenure (renter/owner)

Household income trends by age

Owner-occupied housing values

Total households by age, tenure, income and persons per household

Renter and owner households by number of persons per household

Share of primary residence units vs. units used seasonally/short-term basis

Economic Conditions

Primary employers
Resident employment
Total employment base and trends
Unemployment trends
Income levels
Commuting patterns
Recent and planned economic changes

VSI utilizes the demographic data provider ESRI, which is one of the largest, most well-respected demographic data providers in the country. ESRI provides 2000 and 2010 Census data, current year estimates and five-year projections. VSI also has the ability to utilize HISTA data, which provides detailed demographic information by breaking down households by income, household size, tenure and age.

It is important to recognize that demographic providers primarily rely on past performance within a market to make future projections. Given the rapidly changing attitudes towards urban living, the projections often under count the actual performance. Thus, projections should be considered with this caveat.

A demographic evaluation of migration within the Site PMA is also included in this analysis. This will help to determine where households have moved from that currently reside in the Site PMA.

Field Survey of Conventional Apartments – A field survey of conventional rentals within the Primary Market Area has been conducted. The intent of the field survey is twofold. First, the field survey will be used to measure the overall strength of the local rental housing market. This will be accomplished by evaluations of unit mix, vacancies, rent levels and overall quality of product in the area. The second purpose of the field survey will be to establish those projects that are most likely to be directly comparable to potential new development or redevelopment in the Primary Market Area. An analysis of the short-term rental market has been conducted to gather a general dataset of this type of transient housing options in the area.

Maps illustrating the locations of surveyed properties are included, and the complete Field Survey of all properties is found in an addendum to this housing analysis and feasibility study.

The following information was obtained for each surveyed rental project:

- Property name and address
- Type of project (market-rate, subsidized, Low-Income Housing Tax Credit, etc.)
- Condition (quality rating)
- Date of construction and latest renovation (if applicable)
- Type of utilities and utilities included in rent and those paid by tenant
- Number of units
- Unit mix and type of unit, including bedroom/bath configurations and square footage
- Number of vacancies by unit type
- Length of waiting list (if applicable)
- · Rents by unit type, including any concessions or incentives offered
- Unit and project amenities
- Contact name, address, and phone number
- Absorption history for recently completed properties

For-Sale (Single-family and Condominium) Home Analysis — All condominium and single-family developments in the Primary Market Area constructed within the past five (5) years were identified and surveyed. Information collected includes the date of construction, floor plans offered, number of units planned by floor plan design, unit mix and type of unit, number of unsold units by unit type, sales price by unit type, and unit and project amenities. An analysis of home sales trends and prices was conducted. An evaluation of estimated monthly costs of typical single-family homes or condominium homes in the area was conducted to determine the potential competitive overlap with the current rental market.

Typical values and sales prices have been evaluated in order to compare the estimated monthly mortgage costs to current rental costs in the area. This will be important to determine any potential competitive overlap between homeownership options and rental options.

Planned and Proposed – Planned and proposed projects that may impact the potential new development in the Primary Market Area are discussed. Building and zoning proposals and interviews with officials familiar with area development provide identification of those properties, projects and infrastructure improvements that might be planned or proposed. It is important to establish the likelihood of construction, the timing of the projects and the impact on the markets.

Housing Demand Analyses/Conclusions & Recommendations – Demographic characteristics, along with the current supply, have been evaluated to determine the types of units that are in demand within the Primary Market Area. Specifically, VSI has made recommendations for the number of units that can be supported for a Phase I redevelopment effort, the type of units (conventional market-rate rental apartments, affordable rental apartments, senior-restricted apartments, for-sale attached or detached units), marketable unit square footages, price points (on a per square foot basis), quality, appropriate mix of housing, amenities and general development information that would be most appropriate for the market.

VSI has evaluated the projected number of households at the various income levels required to afford the determined achievable rent and/or sale price points for potential development opportunities. It will be important to evaluate the projected demographic trends at the anticipated year of opening, as the demographic characteristics in five years will be different than the current demographic characteristics. The demographic demand projections are not product specific but provide an indication of the likely need for housing in the PMA. The analysis also addresses absorption of rental and for-sale units in the PMA. VSI has determined the appropriate mixes of product based on price-points and housing type.

Implementation – Recommendations will be made concerning potential strategies and approaches to meet identified housing needs in the Primary Market Area. The written report will thoroughly detail calculations conducted in determining achievable price points and household demand. A narrative discussing the general housing market in the PMA will be included, along with a three- to five-year absorption forecast. We will make assumptions on density and project the number of units that could be produced at the two site locations (currently Desoto Bass Courts and Hilltop Homes).

Gap Analysis for Commercial Development – A retail gap analysis will be performed for various consumer business types (grocery, convenience store, hair salon, pet store, restaurant, etc.) for the site area. A gap analysis compares the actual amount spent in the market area in each retail category to the potential that could be captured in that category. A surplus in any retail category indicates that the current supply of retail opportunity does not meet the demand for that retail category and consumers are purchasing that good or service outside the market area.

Conclusions and recommendations for the retail space will include whether a proposed retail component can be supported in the market area, achievable lease rates and overall marketability for additional commercial space within the PMA.

Sources

VSI uses various sources to gather and confirm data used in each analysis. These sources include the following:

- The 2000 and 2010 Census on Housing
- ESRI
- Urban Decision Group
- Applied Geographic Solutions
- HISTA Data (household income by household size, tenure and age of head of household) by Ribbon Demographics
- U.S. Department of Labor
- Management for each property included in the survey
- · Local planning and building officials
- Local housing authority representatives
- U.S. Department of Housing and Urban Development (HUD)

U.S. Census and the American Community Survey Statement

Since 2005, the American Community Survey (ACS) has been a critical element of the U.S. Census Bureau's reengineered decennial census program. During previous decennial censuses, most households received a short-form questionnaire, while one household in six received a long form that contained additional questions and provided more detailed socioeconomic information about the population.

The 2010 Census was the first exclusively short-form census and it counted all residents living in the United States and asked for name, sex, age, date of birth, race, ethnicity, relationship and housing tenure – resulting in a total of seven variables.

The more detailed socioeconomic information once collected via the long-form questionnaire is now collected by the American Community Survey. The survey provides current data about all communities, every year, rather than once every 10 years. It is sent to a small percentage of the population on a rotating basis throughout the decade. No household will receive the survey more often than once every five years. Each year, the Census Bureau releases three ACS datasets for certain geographic areas. The type of data that is available is dependent upon the total population residing within a geographic area. One-year estimates are available for the largest areas, which are defined as areas with populations of 65,000 or more.

Three-year averages of estimates are available for areas with populations of 20,000 or more and five-year averages of estimates are available for all areas regardless of size. It should be noted that the five-year data set has a significantly smaller sample size than that used to compile the long form in previous censuses.

Since 2011, VSI has included data in our reports from the most recent decennial census in 2010, as well as more detailed data available via the ACS. Currently, we are reporting data that is associated with the 2010-2014 ACS.

Direct comparisons between ACS data and the 2010 decennial census should not be made because the sample sizes and collection methods are completely different – the ACS is an average of estimates while the decennial census is a count. In addition, the ACS data should not be compared to third-party data that provides current-year estimates and five-year projections. The ACS data is provided only as a point of reference.

In the future, we plan on presenting the 2006-2010 ACS and the 2011-2015 ACS data sets side by side to allow our readers to compare consecutive, non-overlapping data sets; however, the 2011-2015 ACS will not be publicly available for all geographic areas until December 2016 or later. Further, each year that passes will allow us to update the comparative ACS data sets to include the most recent non-overlapping five-year ACS data sets.

In addition to the data retrieved from the Census Bureau, VSI utilizes data from several different third-party providers, including ESRI, Ribbon Demographics and Nielsen. Each of these data providers has undergone significant internal changes to incorporate the results of both the 2010 decennial census and the most recent ACS into the algorithms used to calculate current-year estimates and five-year projections of census data; the currently available data utilized in VSI's reports includes 2015 estimates and 2020 projections. The emergence and evolution of the ACS and the ongoing nature of its data collection techniques should result in more accurate demographic and income estimates and projections from these third-party data providers. VSI will always provide the most accurate census counts and estimates, as well as third-party estimates and projections when they are available.

Report Limitations

The intent of this report is to collect and analyze significant levels of data to forecast the market success of potential redevelopment efforts within a specific area. VSI relies on a variety of data sources to generate this report. These data sources are not always verifiable; VSI, however, makes a significant effort to assure accuracy. While this is not always possible, we believe our effort provides an acceptable standard margin of error. VSI is not responsible for errors or omissions in the data provided by other sources.

The reported analyses, opinions and conclusions are limited only by the reported assumptions and limiting conditions, and are our personal, unbiased professional analyses, opinions and conclusions. We have no present or prospective interest in the property that is the subject of this report and we have no personal interest or bias with respect to the parties involved. Our compensation is not contingent on an action or event (such as the approval of a loan) resulting from the analyses, opinions, conclusions in or the use of this study.

Any reproduction or duplication of this report without the express approval of Greater Dayton Premier Management (GDPM) or Vogt Strategic Insights, Ltd. is strictly prohibited.

II. Executive Summary and Conclusions

This market study and feasibility analysis evaluates the housing characteristics and trends impacting the neighborhoods on the west side of Dayton, surrounding the existing Public Housing communities, Desoto Bass Courts and Hilltop Homes. This assessment evaluates the market dynamics relating to the potential redevelopment of this neighborhood.

Considering the demographic characteristics, economic forecast and performance of the existing housing market on the west side of Dayton, the neighborhoods would benefit from the redevelopment of the existing Desoto Bass Courts and Hilltop Homes. New replacement housing would also increase the supply of modern housing alternatives within the Site PMA, which is currently concentrated with older, government-subsidized housing developments. Overall, considering the demographic trends of Montgomery County evaluated in this analysis, additional housing units (rental and for-sale) can be absorbed throughout the county. However, the primary focus of this evaluation is the neighborhoods surrounding Desoto Bass Courts and Hilltop Homes. The following is a summary of the key findings of this housing needs assessment.

Site Neighborhood – Hilltop Homes

Hilltop Homes, is bound by McCabe Avenue, Blanche Street, Jerome Avenue, Groveland Avenue and Haberer Avenue in Dayton, Montgomery County, Ohio. The site is 3.1 miles southwest of downtown Dayton. The subject site is approximately 20 acres and is comprised of several two-story residential structures and a management office. Hilltop Homes is in the established Lakewood neighborhood of west Dayton.

The site has visibility from surrounding roadways, increasing awareness of the site. These roadways generally experience light traffic, which limits potential site exposure. Regardless, site visibility is considered good.

<u>Site Neighborhood – Desoto Bass Courts</u>

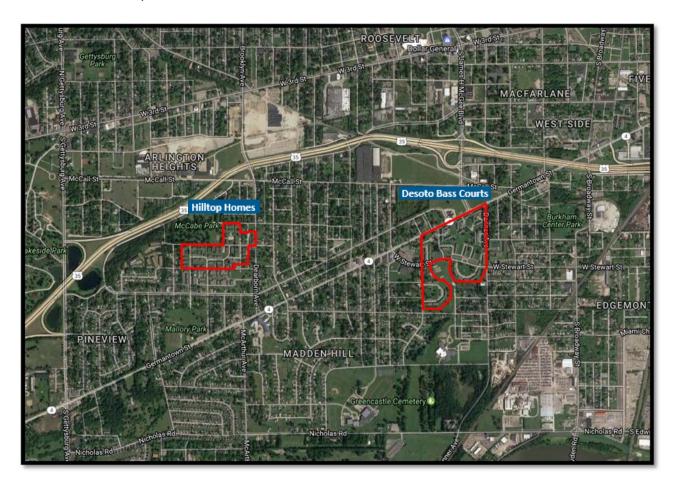

Desoto Bass Courts, is bound by Germantown Street, Danner Avenue, Trieschman Avenue, Weaver Street and Clement Avenue in Dayton, Montgomery County, Ohio. The site is 2.3 miles southwest of downtown Dayton. The subject site is approximately 45 acres and is comprises of several two-story residential structures, a management office and two vacant structures near the western edge of the property. Desoto Bass Courts is in the established Miami Chapel neighborhood in southwestern Dayton.

The site is located in a primarily residential area, with single-family homes surrounding the property. Additionally, affordable rental projects are east and south of the property, confirming the suitability of the site location. Convenience stores, dining options and a public park are all nearby, improving the appeal of the site area. Primary and secondary schools are south and west of the site; their proximity is especially desirable to site residents with children.

The site has visibility from surrounding roadways, increasing awareness of the site. With the exception of Germantown Street, which receives moderate traffic, nearby roadways experience light traffic; this limits potential site exposure. Regardless, site visibility should still be considered very good.

Overall, the subject project fits well with the surrounding land uses. The following map illustrates the boundaries of Hilltop Homes and Desoto Bass Courts.

Additional details of the sites' neighborhoods, as well as pictures and maps of community services, can be found in Section III of this target market study.

Primary Market Area (PMA) and Submarket Delineation

The foundation of this market analysis and feasibility study is the establishment of the Primary Market Area (PMA). The PMA is generally described as the geographic area where the majority of support for a new housing project is expected to originate, where the community services that site residents will likely utilize are located and/or where comparable housing alternatives exist. PMAs are not defined by radius.

The Dayton Site PMA was determined based on interviews with management at the subject sites, as well as other area leasing agents and government and economic development representatives. In addition, the personal observations of our field analysts, including information regarding physical and socioeconomic differences in the market, and a demographic analysis of the area's households and population, were also considered.

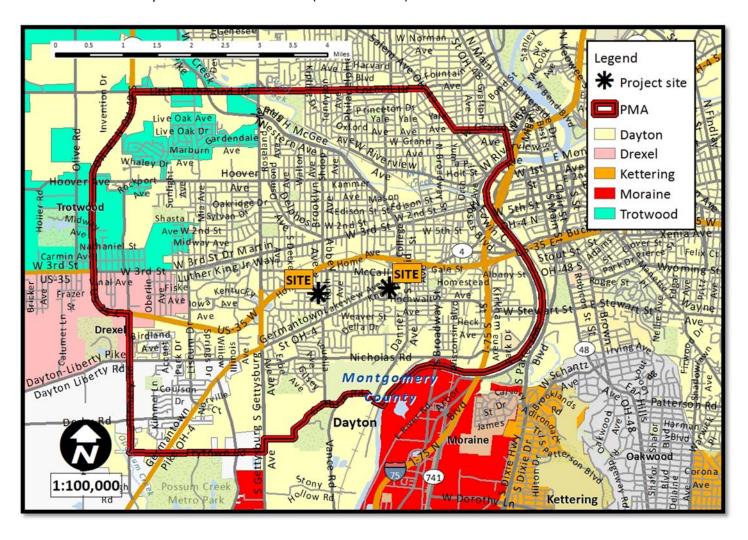

The Dayton Site PMA comprises a west-central portion of the city of Dayton, including the Roosevelt, West Side, Five Points, Edgemont, Fairlane, Pineview, Arlington Heights and Southern Dayton View neighborhoods, and a northeastern portion of the census-designated place of Drexel in east-central Montgomery County. The significant boundaries of the Dayton Site PMA include:

North: Little Richmond Road, Cornell Drive and Salem Avenue

East: The Great Miami River

South: The Great Miami River, Guthrie Road and Frytown Road **West:** Infirmary Road and State Route 49 (NW Connector)

Demographic Analysis

The following demographic overview table compares the population and household trends within the Dayton Site PMA to the city of Dayton, Montgomery County and the state of Ohio.

| | Population/Household Change Overview | | | | | | | |
|--------------------------|--------------------------------------|--------|---------|------------------------|---------|------------|------------|-----------|
| | Site | PMA | City of | City of Dayton Montgon | | ery County | Ohio | |

Source: VSI; ESRI; 2000, 2010 Census

H.H. – Households Pop. – Population

According to the preceding table, the Site PMA population declined by 3.2% between 2010 and 2017, which is a greater loss than occurred in the city of Dayton or the state of Ohio as a whole. Over the next five years, the Site PMA population is projected to decline by 1.2% in the Site PMA, according to ESRI demographic projections.

The following table summarizes the distribution of households by age in the Site PMA, city of Dayton and the state of Ohio over the next five years.

| | | Households by Age | | | | | | | | |
|----------------|----------|-------------------|---------|---------|---------|---------|---------|---------|---------|-----------|
| | Year | < 25 | 25-34 | 35-44 | 45-54 | 55-64 | 65-74 | 75-84 | 85+ | Total |
| | 2017 | 648 | 2,137 | 2,283 | 2,801 | 3,356 | 2,723 | 1,701 | 720 | 16,369 |

Source: 2000, 2010 Census; ESRI; Urban Decision Group; VSI

The Site PMA is projected to experience an increase in households between the ages of 25 and 34, as well as seniors over the age of 85. However, it should be noted that declines in younger households under the age of 45 is sometimes attributed to limited economic and employment opportunities.

Additional analysis of demographic trends in the local market can be found in Section V of this report.

Economic Analysis

The adverse impact of the previous national recession and the downturn in the automobile manufacturing industry in the Dayton area had a negative impact on the Montgomery County economy. Manufacturing is one of the most susceptible industries to slowdowns in the national economy, and it is no surprise that the area was adversely impacted by the national recession. Despite its dependence on manufacturing, it should be noted that the area also has a large presence of military/government, education and health care employment, which are typically more resistant to economic slowdowns.

Montgomery County underperformed both the state and the U.S. from 2001 to 2015. Most of the employment loss from 2008 to 2010 is attributed to the national economic recession, however total employment in the county has been on a downward trajectory since 2001, and remains far below the employment peak in that year. As a result, the net employment loss of 16.6% in Montgomery County was much greater than the Ohio decline of 3.2% during this time.

Although the unemployment rate for Montgomery County has declined since 2013, while county employment growth has risen, the majority of residents at Hilltop Homes and Desoto Bass who are employed likely work in low-paying sectors such as retail trade, food services or public administration. As the economy continues to improve, rent growth at market-rate properties is occurring at a higher rate than wage growth among low-income employees. The need for affordable housing targeting very low-to moderate-income households is especially important during periods of high rent growth.

Further information on the local economy is located in Section VI of this report.

Commercial Retail Analysis

For the purpose of this market study and feasibility analysis, an evaluation of commercial/retail opportunities have been conducted. The site neighborhoods would benefit from the development of both housing and commercial/retail space. As more community services and retail opportunities are offered, more households are likely to consider the site neighborhoods as appealing locations to live.

We have evaluated demographic and economic trends, analyzed current commercial/retail listings and signed leases, and reviewed commercial/retail reports provided by Reis. Reis provides submarket data for the Dayton metropolitan area. The subject sites are located within the Reis "Central Dayton" submarket.

Alp

Park Layne 49 Englewood **Huber Heights** Clayton Murlin Little York Heights 49 Airhill Fai Shiloh Needmore Rd Stringtown Sycamore Northridge Trotwood Fort McKinley Park Wright State Riverside Post Town University Page Mahor Dayton Kemp Rd 3PD St-Drexe 835 35 New Chicago Beavercreek Oakwood Liberty

The Central Dayton submarket map is below.

Note the Reis "Central Dayton" submarket does not coincide directly with the Dayton Site PMA established in this market study and feasibility analysis, as it encompasses a larger geographic area. However, this Reis submarket is the smallest geographic area in which overall retail market data is available.

Kettering

4

The "Central Dayton" submarket has much higher commercial vacancy rates than the entire Dayton metropolitan area, the Midwest and the United States. Based on the Reis report, older commercial properties (those built prior to 1990) are experiencing notably higher vacancy rates than the most modern commercial properties.

The inventory, in terms of square footage, has remained unchanged since 2012, while the vacancy rate has declined from 22.2% to 20.3% between 2012 and first quarter 2017. Additionally, the effective rent has increased from \$7.16 per square foot in 2012 to \$7.70 per square foot in 2017, a 7.5% increase.

According the Reis leakage/surplus analysis detailed in Section X, there is a significant surplus of gas stations within the site neighborhoods while there is leakage for most other retail industry group options within five minutes of the site. This is due to the fact that as retailing patterns have changed over the past decade, retail stores have tended to contract within the Dayton Site PMA. The Westown Shopping Center is the only true concentration of retail within the PMA, which is anchored by a grocery store, pharmacy and a dollar store. Other concentration of retail can be founded along Salem Avenue north of the PMA and specialty retail is found in downtown Dayton east of the PMA.

Sectors with the highest retail gap include grocery stores, health and personal care, general merchandise and food services. Additional establishments in these sectors located within the sites' neighborhoods will have the most benefit to area residents.

Housing Characteristics Overview

We have analyzed demographic data collected by the American Community Survey (ACS) as well as conducted an in-person survey of existing rental housing. The following table summarizes the distributions of the area housing stock:

| Geographic | | 2010 (C | ensus) | 2017 (Est | timated) | 2022 (Pro | ojected) |
|----------------------|-----------------|-----------|---------|------------------|----------|-----------|----------|
| Area | Housing Status | Number | Percent | Number | Percent | Number | Percent |
| | Total-Occupied | 16,673 | 75.7% | 16,370 | 73.5% | 16,269 | 72.6% |

Source: 2010 Census; ESRI; Urban Decision Group; VSI

In 2017, the Site PMA is estimated to have a 26.5% vacancy rate among all housing units, while the city of Dayton, Montgomery County and the state of Ohio have vacancy rates of 22.4%, 12.8% and 10.4% respectively. The largest share of the vacant housing statistic are represented by those homes that are no longer habitable and are functionally obsolete.

Based on the 2011-2015 American Community Survey, the distribution of rental housing units by units in structure type for the Site PMA, the city of Dayton, Montgomery County and the state of Ohio follows:

| | Site | PMA | City of Dayton Montgom | | ery County | State o | f Ohio | |
|---------------------|--------|---------|------------------------|---------|------------|---------|-----------|---------|
| Units in Structure | Number | Percent | Number | Percent | Number | Percent | Number | Percent |

| Total | 8,835 | 100.0% | 29,873 | 100.0% | 254,415 | 100.0% | 1,544,640 | 100.0% |

Source: American Community Survey (2011-2015)

The Dayton Site PMA has a slighter higher share of single-family rental units than the city of Dayton as a whole. Conversely, there is a slightly smaller share of rental structures with 50 units or more in the Site PMA, as compared to the city of Dayton. However, the distribution of rental housing units by structure in the Site PMA is not significantly different than the city of Dayton.

The following table summarizes the distributions of the area vacant housing stock:

| Geographic | Vacant Housing | | 2010 (0 | Census) |
|----------------|---------------------------|-------|---------|---------|
| Area | by Type | | Number | Percent |
| | For-Rent | | 1,117 | 21.0% |

| | | Total | 524,073 | 100.0% |

Source: 2010 Census; ESRI; Urban Decision Group; VSI

In 2010, approximately two-thirds of all vacant housing in the Site PMA was "other vacant," which includes dilapidated, functionally obsolete housing unsuitable for inhabitance. This is a significantly higher share of vacant units than the city of Dayton, Montgomery County or the state of Ohio.

Conventional Rental Base

We identified and personally surveyed 78 conventional rental housing projects containing a total of 4,152 units within the Site PMA during our in-person survey in May and June 2017. This survey was conducted to establish the overall strength of the rental market and to identify those properties that would be theoretically most comparable to modern, new construction that could potentially be supported in the site neighborhood or west side of Dayton. These rentals have a combined occupancy rate of 97.5%, a very high rate for conventional rental housing.

The various surveyed apartment units are segmented by project type. Market-rate apartments are conventional apartments that operate without any government subsidies or rent/income restrictions. Tax Credit rental housing generally targets moderate-income households, often those with incomes between approximately 40% and 60% of the Area Median Household Income (AMHI).

Residents in these units must earn annual incomes of at least a certain amount in order to afford the asking rents, but not more than the maximum allowable income at 60% of AMHI (adjusted for household size). Government-subsidized rental housing technically targets households with incomes below 50% of AMHI. However, the majority of households living in subsidized rental housing typically earn less than 40% of AMHI.

Note that we have primarily surveyed larger, conventional apartment projects in the Site PMA. In addition, we have surveyed a sampling of smaller, non-conventional rentals such as duplexes, single-family homes, privately owned condominiums in primarily owner-occupied communities, etc.

| Surveyed Conventional Rentals | | | | | | |
|-----------------------------------|----------|-------|--------|-----------|--------------|--|
| | Projects | Total | Vacant | Occupancy | Under | |
| Project Type | Surveyed | Units | Units | Rate | Construction | |
| Market-rate | 33 | 957 | 83 | 91.3% | 188 | |
| Market-rate/Tax Credit | 1 | 31 | 0 | 100.0% | 0 | |
| Market-rate/Government-Subsidized | 1 | 124 | 0 | 100.0% | 0 | |
| Tax Credit | 12 | 732 | 2 | 99.7% | 0 | |
| Tax Credit/Government-Subsidized | 12 | 893 | 0 | 100.0% | 40 | |
| Government-Subsidized | 19 | 1,415 | 17 | 98.8% | 28 | |
| Total | 78 | 4,152 | 102 | 97.5% | 256 | |

Source: VSI Field Survey

In general, as is common in most housing markets across the country today, the affordable rental units in the Dayton Site PMA are experiencing higher occupancy levels than the market-rate units. Overall, the demand for conventional apartments in the Dayton area is considered very strong. An ideal typical overall market occupancy rate for conventional apartments in a developed housing market similar to Dayton is approximately 95%. A 5% vacancy rate generally provides enough available rental options to allow current residents to migrate to other housing choices throughout the market. A vacancy rate of less than 5% indicates that overall market demand is exceeding the supply of available rental housing options. Currently, the demand for rental housing in the Dayton Site PMA exceeds the available supply.

Note that within the Site PMA, there is a high share of affordable (government-subsidized and Tax Credit) rental housing. Compared to other portions of Dayton and Montgomery County, the Site PMA has a disproportionately high share of affordable housing. Market demand and demographic support exist across all of Dayton and Montgomery County for this type of housing. However, some jurisdictions in more suburban portions of the county have historically been less accepting of affordable rental housing.

Non-Conventional Rentals (Duplexes, Single-Family Homes or Condos)

During our in-person evaluation of the Dayton rental market, VSI identified and surveyed 68 non-conventional rental units, including single-family rentals, duplex-unit rentals and other small communities with less than 10 units per project. Non-conventional rentals are defined as those rental units not within traditional rental communities. These non-conventional rentals are dominated by single-family homes. The following table summarizes these surveyed non-conventional rentals.

| Surveyed Non-Conventional Rentals | | | | | | | |
|--|----|-------|---------|--|--|--|--|
| Median Bedrooms Units Distribution Collected Ren | | | | | | | |
| | | | | | | | |
| Studio | 9 | 13.2% | \$490 | | | | |
| One-Bedroom | 10 | 14.7% | \$467 | | | | |
| Two-Bedroom | 34 | 50.0% | \$563 | | | | |
| Three-Bedroom | 11 | 16.2% | \$774 | | | | |
| Four-Bedroom | 4 | 5.9% | \$1,033 | | | | |

Section VIII of this report contains further analysis of our survey of rental product (both conventional apartments and non-conventional rentals) in the Site PMA.

Comparable Rental Housing Supply Analysis

There are no significant modern, quality rental housing choices offered in the Dayton Site PMA. Part of the reason may be due to the economic characteristics of the area and the fact that the site PMA is a lower income area than other parts of Dayton. However, as discussed in the "Demographic and Crime Analysis" portion of this target market study found in Section V, there are income-eligible renter households with incomes above what is necessary to afford a quality, modern, market-rate apartment unit.

Currently, there are an estimated 2,053 renter households (in 2017) that have annual incomes of more than \$30,000. Specifically, those renter households represent 23% of all renter households in the Site PMA. Although most of the renter households in the Site PMA are lower income households, there are income-eligible renters in the area, and a limited supply of high-quality market-rate rental choices. This indicates a demographic support base for modern, quality, market-rate apartment development in the Dayton Site PMA.

We have selected the seven most modern, highest quality market-rate apartments in the Dayton Site PMA for illustrative purposes. These seven comparable properties are summarized in the following table.

| | Comparable Market-Rate Projects | | | | | | | |
|-----------|---------------------------------|------------------------------|-------------------|----------------|-------------------|--|--|--|
| Map ID | Project Name | Year Opened/ Renovated | Quality Rating | Total Units | Occupancy Rate | | | |
| 27 | May-Lin Manor Apts. | 1975 / 2006 | B- | 67 | 98.5% | | | |
| 39 | Wright View Apts. | 1968 / 2006 | B- | 49 | 93.9% | | | |
| 55 | The Rockwood | 1980 / 2006 | B- | 84 | 85.7% | | | |
| 59 | 320 Grafton Ave. | 1970 / 2016 | B- | 28 | 100.0% | | | |
| 66 | Chamberlain Apts. I & II | 1966 / 2011 | B+ | 146 | 98.6% | | | |
| 68 | Executive House | 1969 / 2010 | B- | 94 | 95.7% | | | |
| 78 | Maplewood Manor | 1974 / 2006 | C- | 36 + 140* | 94.4% | | | |

^{*}Units under construction

None of the comparable properties are offering any types of discounts on rent, which is not surprising given the extremely high occupancy rates.

Considering the increasing share of one- and two-person renter households projected by ESRI and the American Community Survey, we anticipate demand for smaller bedroom types (one- and two-bedroom) will remain strong. It should be noted that four- and five-person or larger renter households in the Site PMA are projected to decline over the next five years. Typically, these households migrate toward single-family rental homes. As discussed, there is a significant base of modest quality single-family homes. Demand for smaller unit types is anticipated to increase over at least the next five years.

Modern, larger rental projects typically offer a variety of floor plans. This strategy allows properties to respond to a broader base of qualified households as well as empty-nesters who generally prefer more living space. A new development in the site neighborhoods would certainly benefit from offering comparable unit sizes, and from also offering a variety of floor plans among each bedroom type.

The following tables summarize the typical amenities and features found in the high-quality, modern, comparable rental projects, as well as the more upscale amenities and features offered. Although, it should be noted that these upscale and modern finishes/amenities are not found in the existing conventional apartments on the west side of Dayton, they are found in downtown rentals and more upscale suburban locations of Dayton. In addition to typical high-quality, modern rental projects in urban markets, we also provided a table of features and amenities that are more unique to urban markets and would help a newly developed project in the site neighborhoods compensate for other factors and keep development costs, and resulting asking rents, lower.

| List of Typical Amenities and Features | | | | | | | |
|--|--------------------------|-----------------------------|--------------------------|--|--|--|--|
| Unit A | menities | Project/Commu | unity Amenities | | | | |
| Range | Central Air Conditioning | On-site Management | Community/Lounge Space | | | | |
| Refrigerator | Washer/Dryer Hookups | Laundry Facilities | Business/Computer Center | | | | |
| Dishwasher | Intercom/Security System | Property Video Surveillance | Fitness Center | | | | |
| Garbage Disposal | Window Blinds | | | | | | |
| Microwave Oven | Ceiling Fans | | | | | | |

| | Upscale Amenities and Features | | | | | | | |
|-------------------|--------------------------------|--------------------|-----------------------|--|--|--|--|--|
| Unit A | menities | Project/Comm | unity Amenities | | | | | |
| High Ceilings | Granite Counters | Rooftop Garden | Courtyard/Green Space | | | | | |
| Oversized Windows | Stainless Steel Appliances | Billiards Room | Tanning Salon | | | | | |
| Patios/Balconies | Wood Flooring | Movie Theater Room | Bowling Alley | | | | | |
| Loft | Upgraded Molding | | | | | | | |
| Skylights | | | | | | | | |

| Unique Amenities and Features | | | | | | |
|-------------------------------|-----------------------------|---|-------------------------|--|--|--|
| Unit Am | nenities | Project/Community Amenities | | | | |
| Exposed Ductwork | Concrete Counters | Rooftop Covered Patio | Rooftop Gas Fireplace | | | |
| USB Outlets | Black Appliances | First-floor Yoga Studio | Spinning Room | | | |
| Bike Hooks/Storage | LED Lighting | | | | | |
| Polished Concrete Flooring | Built-in Shelving/Storage | Dog Walking/ | Washing Area | | | |
| Programmable | e Thermostats | LED-lit Hallways with Color-changing Lights | | | | |
| Studio Units with Sliding Do | oor/Wall to Separate Living | Community Electronic Bulletin Board and/or Social Media | | | | |
| Space from Sleepir | ng Space, if Desired | Page that can be Tweete | d/Accessed in Real-Time | | | |

A new development in the site neighborhoods will need to at least offer the typical amenities and features. In addition, given the lack of recent market-rate apartment development that has occurred in and around the west side of Dayton, we recommend unique features also be considered. The more upscale and/or unique amenities and features that are offered, the smaller the unit sizes can potentially be and still be considered acceptable and appealing. Unique features will help to increase the marketability of the site neighborhoods, which are characterized as lower-income neighborhoods with fewer rental options. Unique features and designs will help to attract renters to the site neighborhoods, who currently would not consider the sites as realistic housing choices. While affordable housing is in high demand in the site neighborhoods, there is also market demand and demographic support for non-income-restricted rental choices.

Overall, based on the performance of existing area comparables compared to modern conventional rental housing that has been developed successfully in other similar-sized cities in the region, we have established appropriate (and potentially achievable) gross rents for new market-rate rental units in the site neighborhood. Note that the incomes of existing renter households in the Site PMA has also been considered when determining the potentially achievable/appropriate market-rate gross rents.

| Recommended/Appropriate Market-Rate Unit Sizes and Gross Rents | | | | | | |
|--|---------------|-------------------|-----------------|--|--|--|
| Gross Rent | | | | | | |
| Bedrooms/Baths | Square Feet | Gross Rents | Per Square Foot | | | |
| Studio/1.0-Bath | 450 - 550 | \$540 - \$685 | \$1.20 - \$1.25 | | | |
| One-Bedroom./1.0-Bath | 650 - 750 | \$745 - \$900 | \$1.15 - \$1.20 | | | |
| Two-Bedroom/1.0-2.0-Bath | 900 - 1,050 | \$900 - \$1,155 | \$1.00 - \$1.10 | | | |
| Three-Bedroom/2.0-Bath | 1,200 - 1,350 | \$1,080 - \$1,350 | \$0.90 - \$1.00 | | | |

Based on the demographic characteristics of this market, as well as the existing rental housing supply and the projected demographic changes, we have provided unit mix recommendations for a new market-rate development. This does not consider the demographic support or market demand for affordable rental units, which was previously discussed.

| Recommended/Appropriate Market-Rate Unit Mix for Site or Downtown Apartments | | | | | |
|--|----------------|--|--|--|--|
| Recommended | | | | | |
| Bedrooms | Share of Units | | | | |
| Studio | <5% | | | | |
| One-Bedroom | 50% - 60% | | | | |
| Two-Bedroom | 30% - 40% | | | | |
| Three-Bedroom | <10% | | | | |

A new development at one of the subject sites will likely create a new housing opportunity that is not currently available on the west side of Dayton, and will likely need to be priced well above existing conventional apartment rents in order for the development to be economically feasible for a developer. Obviously, VSI has not evaluated building costs or other costs/risk associated with developing and constructing an apartment project. Additional subsidies may be necessary to enable a developer to provide market-rate housing. However, the purpose of this market study and feasibility analysis is to evaluate the market support for additional housing.

Comparable Affordable/Tax Credit Properties

For the purpose of this market analysis and feasibility study, we have evaluated in detail the most modern, highest quality affordable rental choices in the Site PMA. These projects represent the most comparable affordable rentals to a new development that may be built at the site. Nine affordable rental projects have been developed in the past 10 years. The nine selected LIHTC properties are summarized as follows (information regarding property address, phone number and utility responsibility is included in the one-page profiles found in this section). Note that distance to site has been calculated from the largest of the two sites, Desoto Bass Courts.

| | | C | omparabl | e Tax Cred | it Projects | | | | |

SUB – Subsidized (residents pay 30% of their incomes, as this is a government-subsidized property that also operates under the Tax Credit program)

As illustrated in the preceding table, many of the most modern LIHTC rental projects are achieving gross Tax Credit rents near the maximum allowable limits. It is likely that a new rental development could potentially achieve gross rents similar to the maximum allowable limits, assuming it was comparable to and competitive with the existing, most recently developed, highest quality affordable projects in the area. However, the higher the rents charged, the fewer the lowest income households can be served.

Additional details of the rental options in Dayton can be found in Section VII of this housing needs assessment.

For-Sale Housing Supply Analysis

We have analyzed demographic data as well as conducted a survey of existing for-sale/owner-occupied housing opportunities. The following is a discussion of demographic data that impact the various markets. The following is a summary of the median home values for the Dayton Site PMA, as well as the city of Dayton and the state of Ohio.

| Median Home Value 2017 (Estimated) | | | | | |
|---------------------------------------|----------------|---------------|--|--|--|
| Dayton Site PMA | City of Dayton | State of Ohio | | | |
| \$61,688 | \$74,562 | \$141,479 | | | |

The Zillow Group provides details on the average monthly home listings. The following table compares the average monthly home listings per year for the Dayton Site PMA, the city of Dayton and the state of Ohio.

| Average Monthly Home Listings by Year | | | | | | | | |
|---------------------------------------|---------------|---------|---------------|---------|---------------|---------|--|--|
| | Dayton Site | PMA | City of Day | ton | Ohio | Ohio | | |
| | Average Homes | Percent | Average Homes | Percent | Average Homes | Percent | | |

| Overall Change | | | | | | | | |
| (2013 – 2017*) | -40.9% | | -38.7% | | -31.3% | | | |

Source: Zillow *Through April

The average monthly home listings in the Dayton Site PMA have declined considerably over the past few years. However, the decline in home listings is similar to that of the city of Dayton and the state of Ohio.

The Zillow Group also establishes their own value estimate (or "Zestimate"). Note that this is different than the ESRI estimates illustrated earlier in this analysis. Although the median values differ, the general conclusions and take-aways are similar. The benefit to providing a "Zestimate" comparison is that the Zillow Group differentiates single-family homes from condominiums. The following table summarizes the "Zestimate" findings.

| Median "Zestimate" Per Year | | | | | | | | | | |
|-----------------------------|----------|--------------|----------|----------|----------------|----------|-----------|-----------|-----------|--|
| | Da | yton Site Pl | MA | C | City of Dayton | | | Ohio | | |

Source: Zillow N/A- Not Available *Through April

The "Zestimate" value of single-family homes is typically higher than the "all homes" value for the Dayton Site PMA, city of Dayton and the state of Ohio. This indicates that the value of a single-family home is higher than that of a condominium. Note that due to the insignificant amount of data for condominiums within the Dayton area, "Zestimates" for condominiums are not provided. However, the "all homes" category includes both single-family homes and condominiums.

The Zillow Group provides detailed sales statistics of sold homes in Dayton Site PMA (the neighborhoods and ZIP codes in which data was available), the city of Dayton and the state of Ohio. The average sales prices for these three geographic areas are compared in the following table for 2012 through 2016.

| Average Sales Price by Year | | | | | | | | |
|-----------------------------|-------------|---------|-------------|---------|-------------|---------|--|--|
| | Dayton S | ite PMA | City of | Dayton | Oh | Ohio | | |

N/A – Data not available

*Through June (1/2 year data available)

As illustrated in the preceding table, the sales prices in the Dayton Site PMA are well below the city of Dayton and the state of Ohio. This is not surprising considering the demographic characteristics of the Site PMA indicate the west side of Dayton is a lower-income area than the city of Dayton as whole.

The average sales prices per square foot for Dayton Site PMA, the city of Dayton and the state of Ohio are compared in the following table.

| Average Sales Price per Square Foot by Year | | | | | | | | |
|---|---------------|---------|---------------|---------|---------------|---------|--|--|
| | Dayton Site | e PMA | City of Da | yton | Ohio | Ohio | | |
| | Average Sales | Percent | Average Sales | Percent | Average Sales | Percent | | |
| Year | Price/S.F. | Change | Price/S.F. | Change | Price/S.F. | Change | | |
| 2012 | \$26.17 | - | \$44.12 | - | \$74.19 | - | | |
| 2013 | \$19.10 | -27.0% | \$41.90 | -5.0% | \$78.89 | +6.3% | | |
| 2014 | N/A | - | \$43.58 | +4.0% | \$83.11 | +5.3% | | |
| 2015 | \$25.86 | - | \$49.58 | +13.8% | \$86.21 | +3.7% | | |
| 2016* | \$26.79* | +3.6% | \$50.62 | +2.1% | \$89.11 | +3.4% | | |
| Overall Change (2012 – 2016*) | +0.6% | | +14.7% | | +20.1% | | | |

Source: Zillow S.F. – Square Foot N/A – Data not available

The average sales price per square foot in 2016 for the Dayton Site PMA was approximately \$23 less than the city of Dayton and nearly \$62 less than the state of Ohio.

In the Dayton Site PMA, 1.6% of the existing owner-occupied homes were sold over the past year. The percent of homes sold within the city of Dayton (5.1%) is higher than the Dayton Site PMA and the state of Ohio (3.9%). This low share likely reflects the number of older adult households who choose to remain in their home in the PMA. Another explanation is that there are few choices available elsewhere at the price point in which the Site PMA household is able to sell their home for.

^{*}Through June (1/2 year data available)

Surveyed For-Sale Housing

The following is a sample of newer homes recently sold in the Site PMA:

| Address (Year Built) | Bedrooms/ Baths | Square footage | Sales Price (Date Sold) | Sales Price/Square Foot |
|--|--------------------------|-------------------|----------------------------|-------------------------------|
| 655 Superior Avenue Dayton, OH 45402 (2011) | 3 Bedrooms/ 3.5 Baths | 1,820 | \$124,000 (4/16/2017) | \$68 |
| 1138 W. 1 st Street Dayton, OH 45402 (2005) | 4 Bedrooms/ 2 Baths | 1,606 | \$49,900 (3/20/2016) | \$31 |
| 510 N. Williams Street Dayton, OH 45402 (2007) | 3 Bedrooms/ 2 Baths | 1,404 | \$68,000 (6/08/2016) | \$48 |
| 144 Audubon Park Dayton, OH 45402 (2005) | 3 Bedrooms/ 2 Baths | 1,384 | \$85,500 (For Sale) | \$62 |

Based on our analysis of single-family homes in the Dayton Site PMA area over the past two years, the typical price for a modern home ranges between \$50,000 and \$125,000. There is a very limited supply of condominium developments within the Dayton Site PMA, as the majority of condominiums are located in the downtown area of Dayton. We do not believe there is a market fort condominiums in the Site PMA at this time.

Demographic Housing Support Conclusions

It is important to consider the total number of income-eligible households that exist in the Dayton PMA, as this is the area from which the majority of support for a new housing development in the site neighborhood is likely to originate. Considering the specific cross-segmented demographic characteristics of the Site PMA, based on the most detailed demographic statistics available through the U.S. Census, American Community Survey, ESRI and Ribbon Demographics (a Nielson Demographics/Claritas-driven data source), we have evaluated the specific amount of projected demographic support for various housing development options.

Based on our evaluation of targeted housing types, we have used the following assumptions to project the demographic segments of the market that will be targeted by various housing options. The following table summarizes the estimated income ranges for various types of housing development.

| Demographic Support Assumptions | | | | | | |
|---|----------------------|----------|-----------|--|--|--|
| Housing Type and | Targeted | Minimum | Maximum | | | |
| Targeted Age | Household Size | Income | Income | | | |
| Market-Rate: All Ages | 1-, 2- & 3-Person | | | | | |
| Apartments | Renter Households | \$30,000 | No limit | | | |
| Multifamily Affordable (Tax Credit): All Ages | 1-through 5-Person | | | | | |
| Apartments | Renter Households | \$20,000 | \$45,000 | | | |
| Senior Affordable (Tax Credit): Age 55+ | 1- & 2-Person | | | | | |
| Apartments | Renter Households | \$20,000 | \$32,000 | | | |
| Low-Income (Subsidized) Apartments | 1-through 5-Person | | | | | |
| All Ages | Renter Households | \$0 | \$20,000 | | | |
| Low-Income (Subsidized) | 1- & 2-Person | | | | | |
| Senior-Restricted (Age 55+) | Renter Households | \$0 | \$20,000 | | | |
| For-Sale | All Households Sizes | \$45,000 | \$90,000* | | | |

^{*}Although no formal maximum income restrictions exist, we have limited the support analysis

The following is a summary of the demographic support calculations for additional housing development in the site neighborhoods and the west Dayton area. Details of these conclusions can be found in Section IX of this housing needs assessment. Note that these conclusions are for *additional* housing units. The replacement of Hilltop Homes and Desoto Bass Courts is not included in these conclusions. Those two projects can be redeveloped and replaced. In addition to Hilltop Homes and Desoto Bass Courts, the additional housing units that can be supported in the market are summarized in the following table.

| Potentially Supportable New Housing Units – 2020 Conclusions | | | | | |
|--|-------------------|--|--|--|--|
| Type of Housing | Supportable Units | | | | |
| Market-Rate (Family/Senior) Apartments | ~ 70 – 100 Units | | | | |
| Affordable (Tax Credit) Apartments | ~ 140 – 190 Units | | | | |
| Affordable (Tax Credit) Senior-Restricted (Age 55+) Apartments | ~ 50 – 70 Units | | | | |
| Low-Income (Subsidized) Apartments | ~ 240 – 320 Units | | | | |
| Low-Income (Subsidized) Senior-Restricted (Age 55+) | ~ 180 – 260 Units | | | | |
| For-Sale* | ~ 20 – 55 Units | | | | |

^{*}Assumes a sales price discount below cost of development

Up to approximately 70 to 100 market-rate units could potentially be supported by 2020 in the site neighborhoods and surrounding west side of Dayton. These units would likely need to be absorbed over a three-year period. This conclusion assumes that a number of project concepts are developed that offer a variety of unit types, including overall combined mixes of studio, one-, two- and some three-bedroom units. Furthermore, this assumes a variety of unit designs and layouts, including townhouse-style units as well as garden-style walk-up units.

Overall, strong demographic support and market demand exist for additional housing development. Statistically, greater demographic support exists for rental housing, as opposed to for-sale (primary residence) housing. However, as the site neighborhoods are redeveloped and residential land uses increase in the area, we anticipate additional community services, restaurants, shopping options, etc. could also be developed. Once the site neighborhood as a whole begins to redevelop with greater choice of resident services, additional for-sale/owner-occupied housing could be supported.

Incentives should be considered to assist for-sale/owner-occupied housing development, such as property tax abatement for a specific period of time (10 or 15 years, for example) for any housing unit developed within a specific area, such as the site area. This strategy has been successful in helping to increase for-sale housing development in other cities across the country. In addition, down payment assistance incentives for first-time homebuyers, forgivable loans or other specific demographic cohorts has also been a successful strategy to increase for-sale home interest in developing areas.

Considering the demographic trends of Montgomery County evaluated in this analysis, additional housing units (rental and for-sale) can be absorbed throughout the county. Although some communities and jurisdictions in Montgomery County may have a preference toward the development few or no affordable rental housing units, the market demand and demographic support exist throughout the county for this type of housing. While the focus of this market study and feasibility analysis was on the west side of Dayton surrounding Hilltop Homes and Desoto Bass Courts, the overall Montgomery County housing market is in need of additional affordable housing. The west side of Dayton has a disproportionately high share of affordable housing compared to other portions of Montgomery County, despite a need for additional affordable housing throughout the county.

III. Site Neighborhood Description and Area Analysis

Site 1 Location Description – Hilltop Homes

The subject site, Hilltop Homes, is bound by McCabe Avenue, Blanche Street, Jerome Avenue, Groveland Avenue and Haberer Avenue in Dayton, Montgomery County, Ohio. The site is 3.1 miles southwest of downtown Dayton. The subject site is approximately 20 acres and is comprised of several two-story residential structures and a management office. The site visit and corresponding fieldwork were conducted during the week of May 22, 2017.

The following aerial map illustrates the boundaries of the subject site.

Surrounding Land Uses

The subject site is in the established Lakewood neighborhood of west Dayton. Surrounding land uses include residential, commercial and institutional structures. The subject site's adjacent land uses are detailed as follows:

North

McCabe Park and single-family homes are directly north of the site, followed by U.S. Highway 35. North of the highway are Quicksteps Composites facility, the former Gorman Elementary School, railroad tracks that are no longer in service and several large undeveloped parcels. Beyond are single-family homes that extend north to N. James H. McGee Boulevard and Wolf Creek. Several places of worship scattered throughout the residential neighborhood.

East

Little Rock Missionary Baptist, Groveland Avenue and single-family homes border the site to the east, followed Dearborn Market convenience store and Dearborn Daycare Center. Single-family homes continue east to Germantown Street. Along this roadway are Diamond D's Diner, Gina's Pizza & Subs, a funeral home, St. Paul Baptist Church and vacant structures. East of Germantown Street are affordable rental projects, including Desoto Bass Courts and Bancroft Apartments. Beyond are single-family homes extending to railroad tracks that are 1.6 miles east of the site. Farther east are a fire station, industrial usages and Interstate 75. Developments east of the interstate include a hospital, University of Dayton sporting venues and single-family homes.

South

Haberer Avenue borders the site to the south and is followed by Lakeview Co-Op Estates, a 100-unit government-subsidized project. Single-family homes are farther south, with Mallory Park and Westside Supermarket convenience store located on the north side of Germantown Street, 0.3 miles from the site. South of this street are Wogaman Middle School, Huffie's Bar-B-Que and single-family homes. To the southeast are Paul Laurence Dunbar High School, Louis Troy Elementary School, Greencastle Cemetery and Madden Golf Course. Farther south are the City of Dayton Water Reclamation Facility, a landfill and generally undeveloped wooded land beyond.

West

West of the site are single-family homes, followed by four vacant two-story residential structures and Maplewood Manor Apartments, a 36-unit market-rate property. Continuing west is U.S. Highway 35. Adjacent east of the highway are government-subsidized housing projects, Lakeside Park, the Dayton VA Medical Center and Dayton National Cemetery. Farther west is gradually scattered residential development that continues beyond the Dayton city limits.

Surrounding Land Uses Summary

The site is located in a primarily residential area, with single-family homes located immediately north, east and west of the property. Additionally, an affordable rental project is directly south of the property, confirming the suitability of the site location. Convenience stores, dining options, a day care and public parks are all nearby, improving the appeal of the site area. Primary and secondary schools are located south and west of the site; their proximity is especially desirable to site residents with children.

It is important to consider potential nuisances near the site. This includes railroad tracks within 0.5 miles, a water treatment facility 1.5 miles south, a landfill 2.0 miles southwest and some dilapidated and/or vacant structures in the community. These nuisances may be perceived as noise and odor nuisances at times. However, according to the site property manager, marketability has not been negatively impacted. This is evidenced by the site's historically high occupancy and its waitlist. Additionally, affordable rental projects and single-family homes are within similar proximity to these nuisances and have not been significantly negatively impacted.

Overall, the subject project fits well with the surrounding land uses, which contributes to it's continued marketability.

Visibility and Access

The site is bound by McCabe Avenue, Blanche Street, Jerome Avenue, Groveland Avenue and Haberer Avenue and has frontage along all of these roadways. Additionally, the site has partial visibility from surrounding roadways, increasing awareness of the site. These roadways generally experience light traffic, which limits potential site exposure. Regardless, site visibility is considered good.

The site offers several access points, including access points along the aforementioned streets as well as along Ingram Avenue. Residents may choose from the variety of ingress/egress points and utilize whichever is most conveniently located near their building. Despite a lack of turn lanes and stop lights in the area, site access is generally unproblematic due to the overall light traffic. Convenient highway access, nearby bus stops and the presence of sidewalks all improve accessibility. Overall, access should be considered excellent.

Photographs of the site are at the end of section.

Proximity to Community Services and Infrastructure

| Community Services | Name | Driving Distance from Site (miles) |

| | University of Dayton Arena | 2.3 East |
| | Fifth Third Field | 3.7 Northeast |

The site is located near major transit options, with U.S. Highway 35 accessible 0.5 miles north; this highway offers convenient access to Interstate 75 to the east. Greater Dayton RTA offers public bus transportation throughout the area, with the nearest bus stop located on Lakeview Avenue, 0.2 miles south of the site.

Nearby grocery stores include ALDI, 1.6 miles northwest, and More For Less, 2.1 miles northeast. Walmart Supercenter, located 5.5 miles southeast of the site, offers a variety of grocery and retail opportunities. Other area retailers include Dollar General, Family Dollar and Mendelson's, all located within 4.4 miles. Various dining options exist within 1.2 miles of the site, including Huffie's Bar-B-Que, Diamond D's Diner, Shield's Barbeque, Subway and McDonald's.

Educational opportunities are provided by Dayton Public Schools, which provides all levels of primary and secondary education for students. The assigned schools for students residing at the subject site are Louise Troy Elementary School, 1.5 miles southeast, Wogaman Middle School, 0.3 miles south, and Paul Laurence Dunbar High School, 1.3 miles south.

Additionally, postsecondary education is available at the University of Dayton, located 4.6 miles east of the site. The Dayton Metro Library's Madden Hills branch is 0.5 miles southeast and offers access to computers and printers as well as books.

Health services are in proximity of the site. The Medical Center at Elizabeth Place is a full-service hospital located 2.8 miles east and PriMed Physicians, a health clinic, is 2.2 miles northeast. The site is also close to public safety services; the Dayton Police and Fire Departments operate stations 2.2 miles northeast and 1.8 miles southeast, respectively.

Recreational and entertainment opportunities are ample in the surrounding community. Several neighborhood parks are present within 1.7 miles, including the adjacent McCabe Park. Fitness centers within 4.6 miles include the Greater Dayton Recreation Center and a YMCA, both of which offer scheduled programs. Additionally, University of Dayton sporting venues are within 3.6 miles east and Fifth Third Field, home of the Dayton Dragons minor league baseball team, is 4.8 miles northeast.

Site 2 Location Description – Desoto Bass Courts

The subject site, Desoto Bass Courts, is bound by Germantown Street, Danner Avenue, Trieschman Avenue, Weaver Street and Clement Avenue in Dayton, Montgomery County, Ohio. The site is 2.3 miles southwest of downtown Dayton. The subject site is approximately 45 acres and is comprises of several two-story residential structures, a management office and two vacant structures near the western edge of the property.

The following aerial map illustrates the boundaries of the subject site.

Surrounding Land Uses

The subject site is in the established Miami Chapel neighborhood in southwestern Dayton. Surrounding land uses include residential, commercial and institutional structures. The subject site's adjacent land uses are detailed as follows:

North

Germantown Street borders the site to the north and is followed by a few single-family homes, Save Foods convenience store and Rick Jazz Lab. Continuing north are undeveloped parcels, railroad tracks and Corinthian Baptist Church, located 0.3 miles from the site. U.S. Highway 35 is adjacent north, followed by single-family homes and several warehouses. Along W. 3rd Street, 0.8 miles from the site, are Subway, Krispy Krunchy Chicken, Dollar General, the Greater Dayton Recreation Center and a few affordable rental options. Residential development continues farther north.

East

Directly east of the site is Danner Avenue, followed by single-family homes and Bancroft Apartments, a 93-unit Tax Credit and government-subsidized property. Residential development continues east to Burkham Center Park, R&J Trucking and railroad tracks that travel southwest to northeast through the area, located 0.4 miles from the site. East of the railroad tracks are a fire station, industrial usages, office buildings and single-family homes, which continue 0.3 miles to another railroad track. Farther east are additional single-family homes, which continue beyond Interstate 75, primarily surrounding W Stewart Street. Also east of Interstate 75 are the Medical Center at Elizabeth Place and University of Dayton's sporting venues, followed by the Great Miami River.

South

Gillespie Park, Manor Apartments (16-unit government-subsidized project) and single-family homes are directly south of the site. Continuing south is Louis Troy Elementary School, located on the north side of Richley Avenue, 0.2 miles from the site. South of this roadway are Greencastle Cemetery and Paul Laurence Dunbar High School, the Humane Society of Greater Dayton and Madden Golf Course. To the southeast are industrial usages concentrated along the aforementioned railroad tracks and Great Miami River. South of the golf course are the City of Dayton Water Reclamation Facility, a landfill and generally undeveloped wooded land.

West

Adjacent west of the site is Clement Avenue, which is followed by single-family homes, St. Paul Baptist Church, the Dayton Boys & Girls Club and Young Lusain Funeral Home and Crematory. Continuing east are single-family homes, with commercial and dining establishments, such as Shaw Cleaners and Valet and Shield's Barbeque, and some vacant structures located along Germantown Street. Continuing slightly southwest of the site are churches, a public library and Wogaman Middle School. Government-subsidized housing begins 0.8 miles from the site, west of Dearborn Avenue; properties include Lakeview Co-op Estates and Hilltop Homes. Residential development continues to U.S. Highway 35. West of this highway are the Dayton VA Medical Center, Dayton National Cemetery and additional residential development.

Surrounding Land Uses Summary

The site is located in a primarily residential area, with single-family homes surrounding the property. Additionally, affordable rental projects are east and south of the property, confirming the suitability of the site location. Convenience stores, dining options and a public park are all nearby, improving the appeal of the site area. Primary and secondary schools are south and west of the site; their proximity is especially desirable to site residents with children.

Potential nuisances near the site. This includes railroad tracks within 0.3 miles, a water treatment facility 1.3 miles south, a landfill 2.2 miles southwest and some dilapidated and/or vacant structures in the community. These nuisances may be perceived as noise and odor nuisances at times. According to the site property manager, similar to the Hilltop Homes property, marketability has not been negatively impacted.

Overall, the subject project fits well with the surrounding land uses.

Photographs of the site are at the end of this section.

Visibility and Access

The site is bound by Germantown Street, Danner Avenue, Trieschman Avenue, Weaver Street and Clement Avenue and has frontage from all of these roadways. Additionally the site has partial visibility from surrounding roadways, increasing awareness of the site. With the exception of Germantown Street, which receives moderate traffic, nearby roadways experience light traffic; this limits potential site exposure. Regardless, site visibility should still be considered very good.

The site has several access points, depending on which building the site resident lives. This includes Germantown Avenue, Danner Avenue, W. Stewart Street, Oldfield Avenue and Clement Avenue. With the exception of Germantown Avenue, the light traffic on these roadways will allow for unproblematic access, even without turn lanes and stop lights. Convenient highway access, nearby bus stops and the presence of sidewalks improve overall accessibility. Access should be considered excellent.

Proximity to Community Services and Infrastructure

The site is located near major transit options, with U.S. Highway 35 accessible 0.4 miles north; this highway offers convenient access to Interstate 75 to the east. Greater Dayton RTA offers public bus transportation throughout the area, with the nearest bus stops located on Germantown Street, W. Stewart Street and Danner Avenue, all of which are adjacent the site.

Nearby grocery stores include More For Less, 1.2 miles north, and ALDI, 2.3 miles west. Walmart Supercenter, located 4.4 miles southeast of the site, offers grocery and retail opportunities. Other area retailers include Dollar General, Family Dollar and Mendelson's, all within 3.7 miles of the site. Various dining options exist within the neighborhood, including Diamond D's Diner, Shield's Barbeque, Subway and McDonald's, all within 1.8 miles.

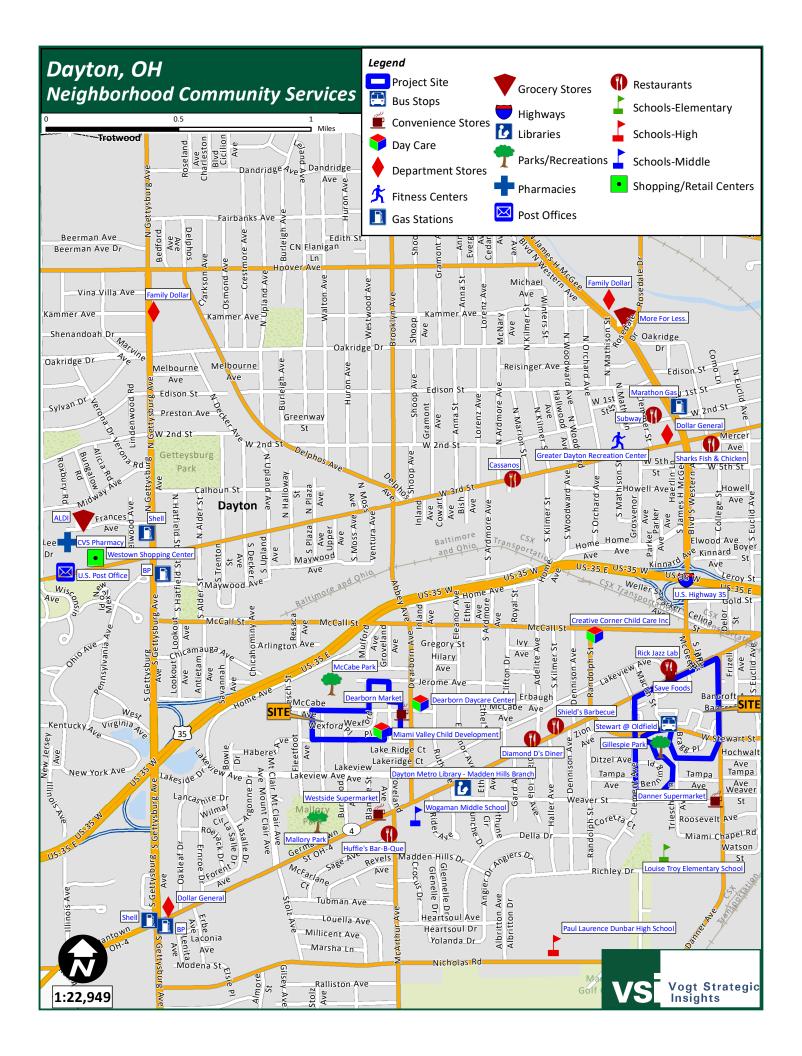

Educational opportunities are provided by Dayton Public Schools, which provides all levels of primary and secondary education for students. The assigned schools for students residing at the subject site are Louise Troy Elementary School, 0.8 miles south, Wogaman Middle School, 0.8 miles southwest, and Paul Laurence Dunbar High School, 1.3 miles southwest. Additionally, postsecondary education is available at the University of Dayton, located 2.5 miles east of the site. The Dayton Metro Library's Madden Hills branch is 0.7 miles southwest and offers access to computers and printers as well as books.

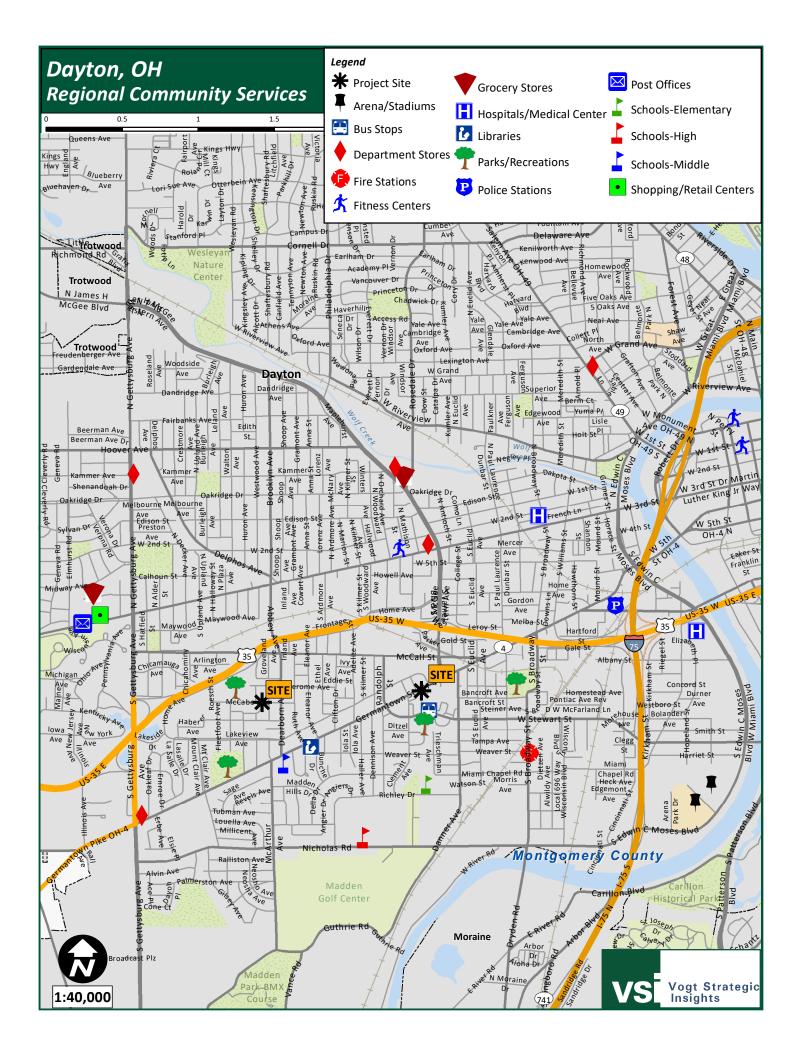

Health services are in proximity of the site. The Medical Center at Elizabeth Place is a full-service hospital located 1.8 miles east and PriMed Physicians, a health clinic, is 1.4 miles northeast. The site is also close to public safety services; the Dayton Police and Fire Departments operate stations 1.1 miles northeast and 0.8 miles southeast, respectively.

Recreational and entertainment opportunities are ample in the surrounding community. Several neighborhood parks are present within 1.4 miles, including the adjacent Gillespie Park. Fitness centers within 3.5 miles include the Greater Dayton Recreation Center and a YMCA, both of which offer scheduled programs. Additionally, University of Dayton sporting venues are within 2.3 miles east and Fifth Third Field, home of the Dayton Dragons minor league baseball team, is 3.7 miles northeast.

Maps illustrating the location of community services are on the following pages.

Overall Site Evaluation

The surrounding land uses for both sites include residential areas, which have proven to be a very marketable setting. Site access is considered excellent, as site access points typically experiences light amounts of traffic. Visibility is good, as the sites are visible from adjacent roadways. Pedestrian access is sufficient, because most roadways have sidewalks. The locations afford convenient access to local services, and the sites benefit from multiple service establishments that are within a short drive. The majority of essential community services are within 5.5 miles of the site. The subject sites are within 2.8 miles of safety services. Greater Dayton RTA offers several public transportation stops near the site along Lakeview Avenue.

IV. Primary Market Area Delineation

The foundation of this market analysis and feasibility study is the establishment of the Primary Market Area (PMA). The PMA is generally described as the geographic area where the majority of support for a new housing project is expected to originate, where the community services that site residents will likely utilize are located and/or where comparable housing alternatives exist. PMAs are not defined by radius.

The Dayton Site PMA was determined based on interviews with management at the subject sites, as well as other area leasing agents and government and economic development representatives. In addition, the personal observations of our field analysts, including information regarding physical and socioeconomic differences in the market, and a demographic analysis of the area's households and population, were also considered.

The Dayton Site PMA comprises a west-central portion of the city of Dayton, including the Roosevelt, West Side, Five Points, Edgemont, Fairlane, Pineview, Arlington Heights and Southern Dayton View neighborhoods, and a northeastern portion of the census-designated place of Drexel in east-central Montgomery County. The significant boundaries of the Dayton Site PMA include:

North: Little Richmond Road, Cornell Drive and Salem Avenue

East: The Great Miami River

South: The Great Miami River, Guthrie Road and Frytown Road

West: Infirmary Road and State Route 49 (NW Connector)

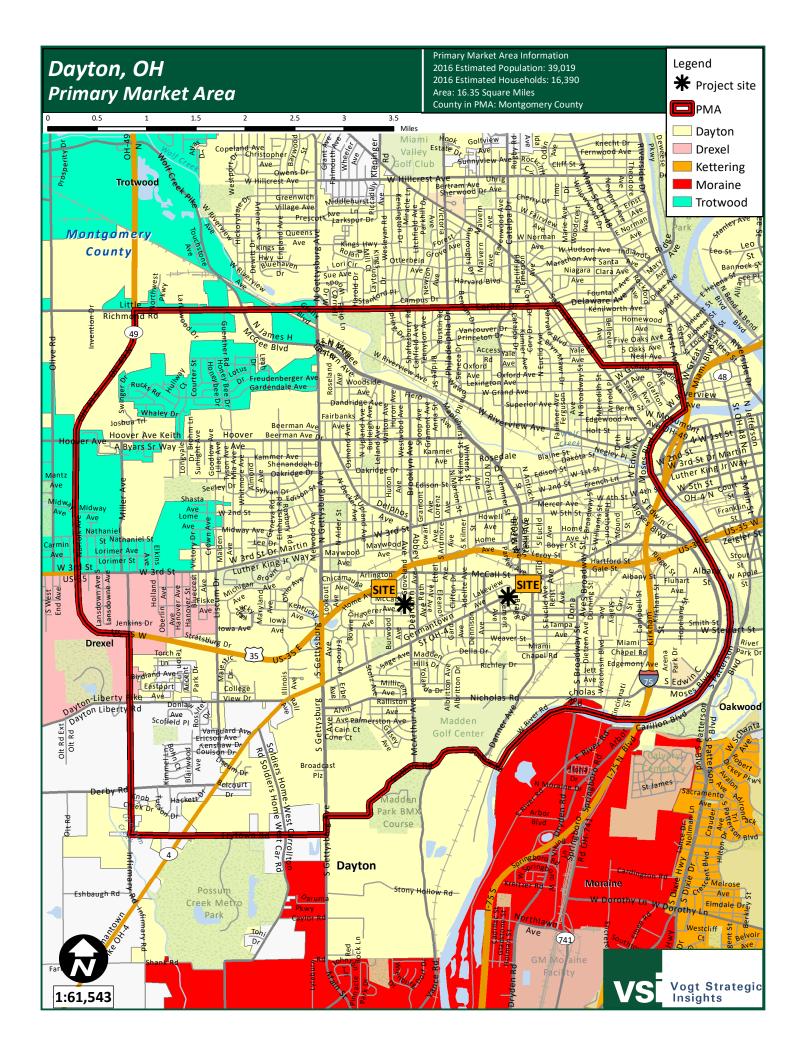

Rhonda Lee is the portfolio manager of Desoto Bass Courts and Hilltop Homes, the existing subject properties. Ms. Lee stated that almost all of site's current residents are from the surrounding area. She estimated that between 95% and 98% of tenants are from within a three-mile radius of respective properties. The remaining residents are largely from outside the city limits.

The Dayton Site PMA boundaries were influenced by the area's population densities and geographical and socioeconomic factors. Communities to the north of the Site PMA are generally populated by households with higher income levels who would not likely migrate to the site area for housing. The Great Miami River forms a natural division in the eastern area of the Site PMA. Additionally, households located to the east of the Site PMA in the downtown Dayton and the Oakwood neighborhood have high household incomes. Generally rural, undeveloped land is present south and west of the Site PMA. These sparsely populated areas are comprised of homeowners who would not provide support for new housing. The Site PMA is comprised of neighborhoods in the western portion of Dayton with low- and very-low income households. These households are the most likely to provide support for a new affordable rental housing development.

A small portion of support comes from some other areas of Dayton and Montgomery County and both suburban and rural communities in the area; however, this support component is not significant. Therefore, we have not considered a secondary market area in this report.

A map delineating the boundaries of the Site PMA is on the following page.

V. Demographic Trends and Crime Analysis

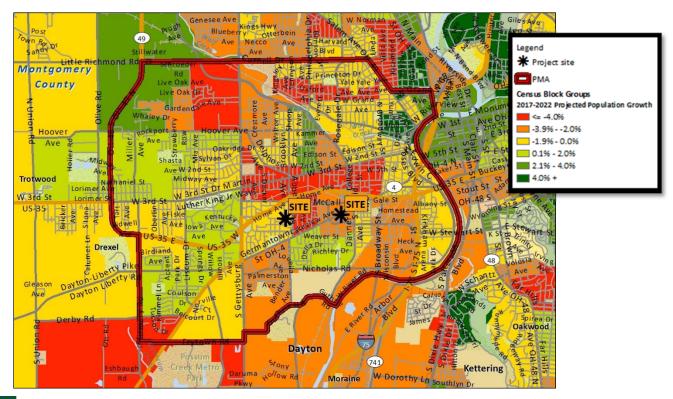

The following demographic overview table compares the population and household trends within the Dayton Site PMA to the city of Dayton, Montgomery County and the state of Ohio.

| | Population/Household Change Overview | | | | | | | | |
|--------------------------|--------------------------------------|--------|---------|--------|---------|------------|------------|-----------|--|
| | Site | PMA | City of | Dayton | Montgom | ery County | Oh | nio | |

H.H. – Households Pop. – Population

According to the preceding table, the Site PMA population declined by 3.2% between 2010 and 2017, which is a greater loss than occurred in the city of Dayton or the state of Ohio as a whole. Over the next five years, the Site PMA population is projected to decline by 1.2% in the Site PMA, according to ESRI demographic projections. The following is a demographic thematic map illustrating the projected population change by census block group between 2017 and 2022.

Population Trends

| | | | Total Po | pulation | |

Crime Risk

The FBI Uniform Crime Report (UCR) is the primary source for Crime Risk Data. The UCR is the compilation of data the FBI collects from each of roughly 16,000 separate law enforcement jurisdictions across the country. The current update reveals 95% overall coverage rate of all jurisdictions nationwide and a 97% of all metropolitan area jurisdictions.

Applied Geographic Solutions applies the UCR at the jurisdictional level to model seven types of crime at other levels of geography. The national average is the base for the Risk Index standards. The 100 Risk Index value for a precise risk indicates that, for the area, the risk's average probability is consistent across the United States.

It is notable the aggregate indexes for total crime, personal crime and property crime are not weighted; a murder is no more significant statistically than petty theft. Accordingly, exercise caution in their use. The following table compares the crime risk for the various key geographic areas of this target market study.

| | Crime Risk Index | | | | | |
|-----------------------|-------------------------|-----|----------------------|------|--|--|
| | Site PMA City of Dayton | | Montgomery County | Ohio | | |
| Total Crime | 383 | 306 | 181 | 111 | | |
| Personal Crime | 279 | 225 | 123 | 78 | | |
| Murder | 343 | 293 | 153 | 90 | | |
| Rape | 404 | 331 | 203 | 133 | | |
| Robbery | 594 | 444 | 228 | 119 | | |
| Assault | 124 | 106 | 57 | 54 | | |
| Property Crime | 387 | 307 | 194 | 116 | | |
| Burglary | 368 | 321 | 198 | 128 | | |

| Motor Vehicle Theft | 447 | 316 | 180 | 90 | | |

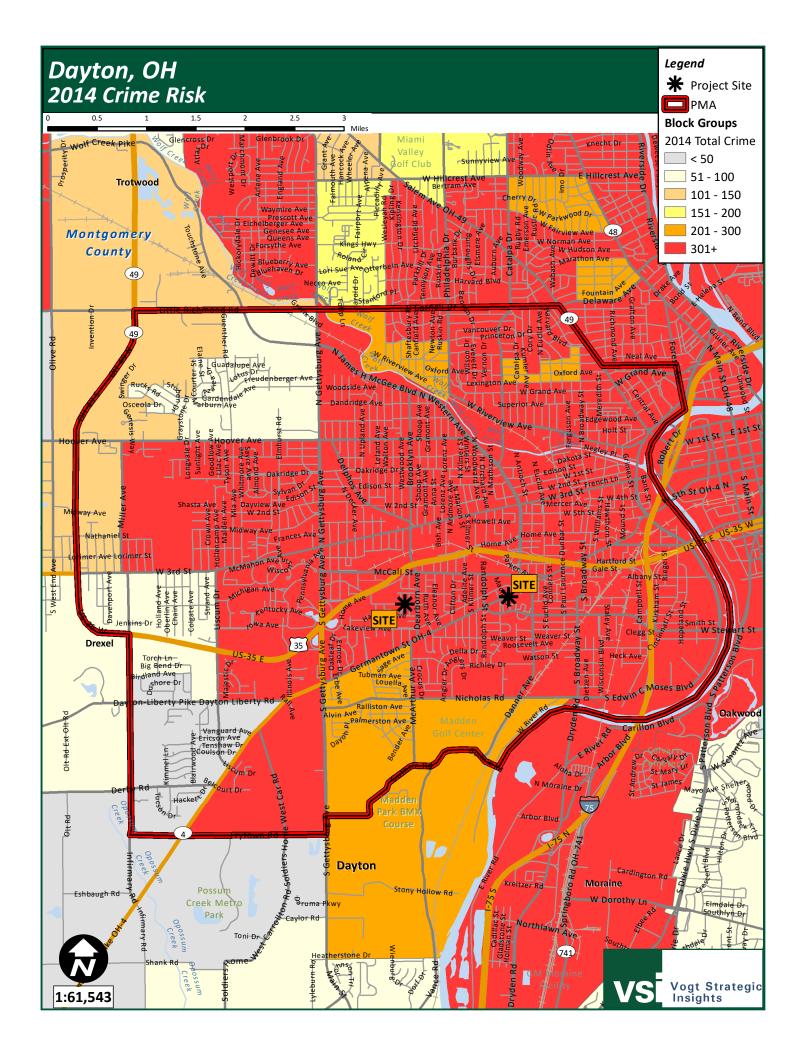

Source: Applied Geographic Solutions

As indicated in the preceding table, the state of Ohio has an overall crime risk that is slightly higher (11 points) than the national average. The city of Dayton has an overall crime risk index that is 206 points higher than the national average at 306. The Dayton Site PMA has a total crime risk of 383, which is higher than the national average. However, this is not unusual for urban neighborhoods. Considering the crime risk in the Site PMA is higher than the overall crime risk in the city of Dayton and the state of Ohio, developers planning to create new housing in the site neighborhood will need to address the concerns of potential residents moving to the site from neighborhoods outside Dayton (both local and regional) that have lower crime risk.

Nationally, households who respond to downtown and urban development have accepted the higher crime risks if adequate security measures are initiated at the development. VSI recommends new residential development in the site neighborhood offer security features that will improve the perception of safety, such as secured entry (possibly through key fobs and/or key pads), and possibly security cameras in commons areas and hallways. Furthermore, adequate lighting will be important throughout the property grounds.

A map illustrating the location of area crime risk by census block groups follows.

VI. Economic Conditions and Trends

The following sections provide an overview of economic trends affecting the subject site as proposed. The site is located in the city of Dayton, which is located in Montgomery County that is part of the three-county Dayton, OH Metropolitan Statistical Area (Dayton MSA). This section includes an analysis of employment within both of these larger geographies and the Dayton Site Primary Market Area (PMA). This also includes an analysis of the employment of residents and unemployment rate trends. Major employers in the region are also listed. Finally, we comment on the trends affecting the subject site.

Metropolitan Employment

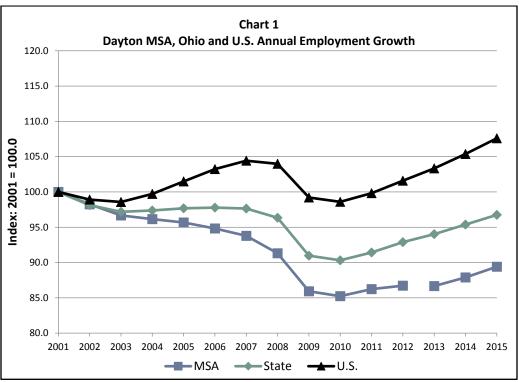

The trend and distribution of MSA-level employment is important to understand because MSAs are defined by the federal government based on the commuting patterns of workers. Consequently, the MSA is an economic unit from the standpoint of labor markets and it represents the nature and growth of jobs that workers in the PMA have available to them and are likely to fill. It must be emphasized, however, that some of these jobs will be filled by workers living outside the MSA, while some MSA residents may work outside the MSA. The former are counted here, but the latter are not. We consider first the overall, long-term and near-term employment growth trends and then the distribution of jobs in terms of both industries (where people work) and occupations (what they do).

Jobs in the MSA by Industry

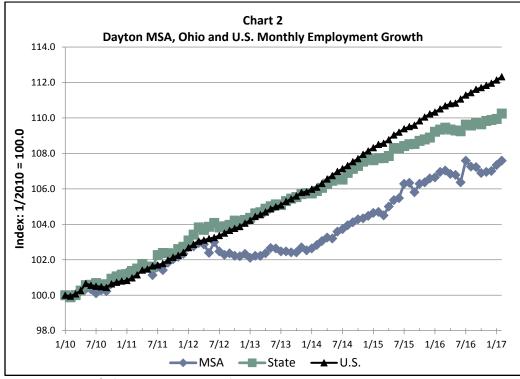

Charts 1 and 2 on the next page compare the trend of total payroll employment in the Dayton MSA to U.S. and statewide averages. Chart 1 illustrates the annual trend from 2001 through 2015, while Chart 2 shows the monthly employment trend since labor market growth resumed in January 2010. Employment growth is measured on an index basis, with all employment totals in 2001 or January 2010 set to 100.0; thus, the charts show cumulative percentage growth since those dates.

Chart 1 illustrates that, while the change in U.S. employment from 2001 to 2015 was 7.6%, the change in Ohio employment was -3.2% and the change in Dayton MSA employment was -10.6%. As Chart 2 shows, the change in MSA employment was 7.6% between January 2010 and February 2017, compared to 10.3% for Ohio and 12.3% for the U.S. Note that Preble County, OH had been dropped from the 2013 definition of the Dayton MSA. The 2013 through 2015 MSA data points reflect the employment under the new definition.

Source: U.S. Bureau of Labor Statistics, Current Employment Statistics

Table 1 points out the annual average number of jobs by industry within the MSA during 2015 using the North American Industry Classification System (NAICS). A detailed description of NAICS sectors can be viewed on our website at <u>VSInsights.com/terminology.php</u>.

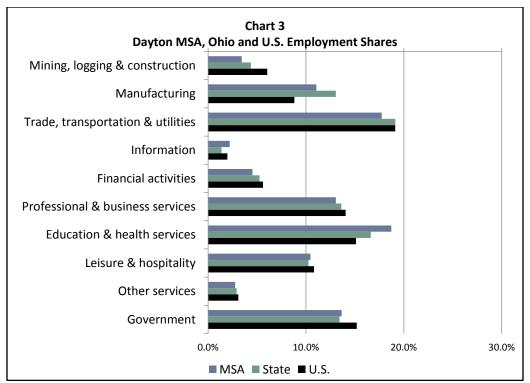

Along with the employment totals and percentages for the MSA, the location quotient for each sector is also presented. This is calculated as the percentage of MSA employment in the sector (as shown in the table) divided by the percentage of U.S. employment in that sector times 100. Thus, a location quotient greater than 100 implies that the sector has a larger-than-average concentration in the MSA – in other words, that employment is higher than expected in an economy of this size. The two most heavily concentrated private sectors (compared to the U.S.) are Manufacturing and Education and Health Services. Chart 3 compares employment shares at the MSA, state and national levels graphically.

| Table 1 Sector Employment Distribution, Dayton MSA, 2015 | | | | | | |
|--|---------|---------|----------|--------------------|--|--|
| | Emplo | yment | Location | Location Quotient* | | |

Jobs in the MSA by Occupation

The preceding section analyzed employment within the Dayton MSA by industry – where people work regardless of what they do. This section presents estimates of employment by occupation – what people do regardless of where they work. Occupational employment estimates are available only for May; the latest are from May 2016. Occupational employment is categorized using the Standard Occupational Classification (SOC) system.

Table 2 on the following page presents MSA occupational employment by major group. Because jobs here are classified by activity rather than place of employment, the occupational group totals include both private and public sector workers. As with industry employment, location quotients are presented along with employment totals. These have the same interpretation here that they do in Table 1.

| Table 2 Occupational Employment Distribution, Dayton MSA, May 2016 | | | | | | |
|--|---------|---------|--------------------|----------|--|--|
| | | pyment | Location Quotient* | | | |
| SOC Major Occupational Group | Number | Percent | vs. Ohio | vs. U.S. | | |

County Employment and Wages

Jobs in the Site County

The following charts and tables analyze employment over time and by sector in Montgomery County, Ohio. They are analogous to those for the MSA in the previous section, although the source dataset is different and not as current. Chart 4 and Table 3 present the trend of Montgomery County employment from 2001 through 2015. The multiyear percentage changes at the bottom of Table 3 represent periods of expansion and contraction at the national level. Montgomery County underperformed both the state and the U.S. from 2001 to 2015. Most of the employment loss from 2008 to 2010 is attributed to the national economic recession; however, total employment in the county has been on a downward trajectory since 2001 and remains far below the employment peak of that year. As a result, the net employment loss of 16.6% in Montgomery County was much greater than the Ohio decline of 3.2% during this time.

^{*}Location quotient of 100.0 is the standard for the specific area. Quotients above 100.0 indicate higher than standard shares, while quotients below 100.0 indicate lower than standard shares.

Table 4 presents Montgomery County's average employment distribution by sector, together with associated location quotients. In general, the relative concentrations measured by the location quotients are highly stable over time, so the current composition of employment is probably quite similar to that shown here. Information and Education and Health Services are more highly concentrated as compared with the state location quotient. Chart 5 compares these employment shares to state and national averages.

Employment and Unemployment of Site County Residents

The preceding section analyzed the employment base within Montgomery County. Some of these jobs may be filled by residents of other counties; conversely, some workers living in Montgomery County may be employed outside the county. Both the employment base and residential employment are important: the local employment base creates indirect economic impacts and jobs, while the earnings of county residents, regardless of where they are employed, sustain the demand for housing and other goods and services within the county.

Chart 6 and Table 5 on the following page show the trend in county employment since 2001. Although the presentation is analogous to that of employment growth and year-by-year totals in the previous section, it is important to keep in mind that the two measures are fundamentally different. The earlier analysis focused on the number of jobs in Montgomery County; this one considers the number of Montgomery County residents who are working. The multiyear percentage changes at the bottom of Table 5 represent periods of employment expansion and contraction at the national level.

Source: U.S. Bureau of Labor Statistics, Local Area Unemployment Statistics, Current Population Survey

Between 2001 and 2016, Montgomery County fared worse than Ohio and the U.S. in terms of residential employment change, recording a 10.7% decrease over the reporting period. Between 2010 and 2016, residential employment grew by 0.9%, compared to greater employment gains experienced at the state (3.5%) and national (9.4%) levels during this time.

Jobs in the county (as shown in Table 3) outnumbered employed residents by 5.2% in 2015. This would suggest that Montgomery County is an employment center for the region.

Chart 7 and Table 6 (on the following page) present Montgomery County, state and U.S. unemployment rates over the past decade. The table also shows the Montgomery County labor force, resident employment (from Table 5) and the number of unemployed (i.e., those not working who have actively sought employment over the previous month). Montgomery County's unemployment rate has been higher than state averages over the last decade; it peaked at 11.4% in 2010, and has fallen by 660 basis points since then. It should be noted that a shrinking labor force is a factor in the improving unemployment rate. The most recent unofficial, not seasonally adjusted unemployment rate for Montgomery County is 4.2% as of April 2017.

Occupational Wages in the Site County

Table 7 on the next page compares typical wages by primary SOC occupational group in the Dayton MSA with those of Ohio and the U.S. Although comparable statistics are unavailable at the county level (except for single-county MSAs), MSAs are defined on the basis of commuting patterns, and wages should be fairly consistent across the MSA. These wage estimates are also subject to potentially large margins of error, therefore what may seem to be a large difference may not be statistically significant. Thus, the table also indicates whether the local area's wage is significantly different than the national average wages. Note that error margins are smaller for states than they are for regions within those states. As a result, it is possible for a state wage that is lower than the U.S. average to be significant, while a local wage that is even lower than the state is insignificant.

| Table 7 Median Occupational Wages, Dayton MSA, May 2016 | | | | | | |
|--|------------|---------|---------|--|--|--|

Employment of Site County Residents by Industry and Occupation

Limited data are available regarding the employment of Montgomery County residents by industry and occupation based on aggregated NAICS sectors and SOC occupational groups. These are five-year averages covering the 2011-2015 American Community Survey (ACS), but as in the analyses above, they can be compared to statewide and national averages to gain insight into how the county differs from these larger areas.

Employment by industry is shown in Table 8 on the next page. Although the sectors in general are consistent with those in earlier tables, one major difference is that Government employment does not appear, but Public Administration does. These are core government functions, but do not include employment in government establishments such as schools and hospitals. Those were included in Government in the earlier tables, but here are grouped with private firms in sectors such as Educational and Health Services. Occupational employment is shown in Table 9. These categories are more highly aggregated versions of those in Tables 4 and 8. Note that total industry employment equals total occupational employment, as it must. The same is theoretically true of the MSA-level industry and occupational employment totals in Tables 1 and 2 as well; these differ because they are reported for different time periods.

| Table 8 Sector Employment Distribution Montgomery County Residents, 2011-2015 | | | | | | |
|---|---------|---------|----------|-----------|--|--|
| | Emplo | yment | Location | Quotient* | | |

| Public Administration | 13,379 | 5.7% | 146.2 | 117.8 | | |
| Total Employment | 236,657 | 100.0% | 100.0 | 100.0 | | |

Source: U.S. Census Bureau, American Community Survey

^{*}Location quotient of 100.0 is the standard for the specific area. Quotients above 100.0 indicate higher than standard shares, while quotients below 100.0 indicate lower than standard shares.

| Table 9 Occupational Employment Distribution Montgomery County Residents, 2011-2015 | | | | | | |
|---|---------|---------|----------|----------|--|--|
| Employment Location Quotient* | | | | | | |
| SOC Major Group | Number | Percent | vs. Ohio | vs. U.S. | | |
| Management, Business, Science and Arts | 84,250 | 35.6% | 101.4 | 97.0 | | |
| Service | 45,438 | 19.2% | 109.1 | 106.1 | | |
| Sales and Office | 58,218 | 24.6% | 102.9 | 102.1 | | |
| Natural Resources, Construction and Maintenance | 15,383 | 6.5% | 84.4 | 73.0 | | |
| Production, Transportation and Material Moving 33,369 14.1% 89.2 115.6 | | | | | | |
| Total Employment | 236,657 | 100.0% | 100.0 | 100.0 | | |

Source: U.S. Census Bureau, American Community Survey

One would expect the sector location quotients in Table 8 to be relatively similar to those in Table 4, aside from the reporting of government employment in other sectors in Table 8. If a sector's location quotient in Table 4 is far higher than that in Table 8, it suggests that many jobs in the sector within Montgomery County are filled by workers from other counties, while a location quotient that is far higher in Table 8 suggests that many workers living in Montgomery County commute out to these jobs in other counties.

^{*}Location quotient of 100.0 is the standard for the specific area. Quotients above 100.0 indicate higher than standard shares, while quotients below 100.0 indicate lower than standard shares.

Largest Employers

Table 10 lists the 10 largest employers in Montgomery County. Together, these employ more than 69,000, approximately 28% of total county employment.

| Table 10 Largest Employers in Montgomery County | | | | | |
|---|-----------------------------------|------------|--|--|--|
| Employer | Industry | Employment | | | |
| Wright-Patterson Air Force Base | National Defense | 26,720 | | | |
| Premiere Health Partners | Health Care | 13,500 | | | |
| Kettering Health Network | Health Care | 8,259 | | | |
| Montgomery County | Government | 4,343 | | | |
| The Kroger Company | Grocery | 4,335 | | | |
| LexisNexis | Content-Enabled Workflow Services | 3,000 | | | |
| Wright State University | Education | 2,469 | | | |
| University of Dayton | Education | 2,453 | | | |
| Sinclair Community College | Education | 2,237 | | | |
| Dayton VA Medical Center | Health Care | 2,154 | | | |
| | Total | 69,470 | | | |

Source: Montgomery County CAFR, 2015

The employers listed above have remained the same over the past several years, although their employee numbers have fluctuated. Over the course of the last 36 months, the Kettering Health Network increased the most, adding over 2,600 employees, while Wright-Patterson Air Force Base shed about 3,200 positions. The Dayton Public Schools continues to shed jobs, dropping 306 people from its workforce since 2012.

The Dayton area manufacturing base has declined by an estimated 30% since 2000. Two area employers, Delphi Automotive Systems and General Motors, have steadily cut jobs over the past several years, dropping them both out of the top 10 area employers. Delphi has closed plants in Moraine, Kettering and Dayton, and a brakes plant on Needmore Road will be transitioned for use as a distribution center. Illinois-based parts supplier Tenneco bought a portion of Delphi's holdings and employs an estimated 400 former Delphi workers.

While the region's traditional manufacturing base in automobile parts and assembly has seen dramatic changes and relocations in recent years, manufacturing in the medical, aerospace and high tech sectors remains strong. A leading sign of the growing advanced technology base is the Miami Valley Research Park. Located on more than 1,250 acres, the park is currently home to 42 organizations with a combined employment of 4,400 jobs.

Wright-Patterson Air Force Base (WPAFB) is the largest single-site employer in Ohio. WPAFB has been affected by sequestration cuts to military budgets that furloughed 13,000 local Air Force civilian workers for 22 days each, costing the region's economy over \$100 million in lost wages through September 2013. Local defense contractors who employ thousands of workers have taken steps to manage and survive the sequestration cuts in the form of workforce reductions and cutting plans for investments. In May 2015, Military.com quoted Wright-Patterson installation commander Col. Deviller: "There is no doubt that sequestration had an impact on Wright-Patterson, and if it returns in (fiscal year 2016), we anticipate serious issues that will continue to impact long-term maintenance and sustainment on critical infrastructure as well as military construction programs."

According to Keith Klein, senior economic development specialist for Dayton Innovation, the top employers are considered stable at this time, with the exception of the civilian employers and local contractors at Wright Patterson who may have been affected to varying degrees by the sequestration budget cuts. Several companies have chosen to relocate their headquarters to downtown, moving their workers in the last few years. These include Premiere Health Partners, Key-Ads Inc., DataYard/Donet, Mid-Mark, Peco Manufacturing and Tri-com.

The Ohio Department of Job and Family Services has received four Worker Adjustment and Retraining Notifications (WARN) for the city of Dayton during the past 24 months, which are listed below. There are no notices to date in 2017.

| Business | Notice Date | Layoff or Closure | Jobs Lost |
|-------------------------|-------------|-------------------|-----------|
| Direct Energy | 4/2016 | Closure | 50 |
| Flowserve Corp. | 2/2016 | Closure | 80 |
| Measurement Specialties | 2/2016 | Closure | 58 |
| 3M | 10/2015 | Closure | 75 |
| | | Total | 263 |

In addition, the local media reported the future closure of Assurant's Dayton facility in October 2016, when it consolidates operations to Springfield. About 150 Dayton jobs will be affected. Ohio Department of Developmental Disabilities plans to shut down the Montgomery Developmental Center by July 2017, which will affect 94 residents and 213 workers.

Company expansions that are recently completed or underway represent millions of investment dollars into the region as well as creating new jobs over the next few years. These projects include:

- In 2014, automotive glass manufacturer Fuyao completed the purchase of a portion of the former GM assembly plant in Moraine, located just south of Dayton. As of mid-2016, Fuyao employed more than 1,500 at the location, with plans of bringing in 50 to 100 new workers per month for the foreseeable future.
- The region has also benefitted from a new Procter & Gamble distribution center in Union's Global Logistics Airpark. The 1 million-square-foot facility became operational in 2015 and created 800 new jobs through third-party logistics and packaging providers Excel and Quality Associates. The company planned to have as many as 600 workers.
- In December 2015, NuVasive announced it selected the former MotoMan building in West Carrollton as the location of it new medical device manufacturing facility. The \$45 million investment will create 195 new jobs while retaining 97 current positions. The company began moving into the facility in July 2016 and construction is expected to be complete late 2017.
- CareSource announced in October 2016 that it will be building a new 250,000-square-foot office building in downtown Dayton to centralize its employees. Construction on the seven-story building is planned to begin in 2017 and it will be ready for 900 employees in 2019.
- Other Dayton region employers that received tax credits in 2016 for planned expansion projects include DMAX Ltd. in Moraine, Tenneco Automotive in Kettering, Silfex in Eaton and Frontier Technology in Beavercreek. Together these projects will create close to 800 new jobs.

Primary Market Area

This section analyzes employment and economic factors within the Site PMA.

Employment in the PMA

Employment by sector within the Dayton Site PMA is shown in Table 11. These totals represent jobs within the PMA, not industry of employment of residents. Montgomery County employment is shown for comparison. Also shown is a "location quotient" for PMA employment. Although this is interpreted in the same way as those in previous tables, this location quotient is calculated relative to county, not U.S. employment. Based on employment figures, Site PMA employment is heavily concentrated in Manufacturing and Health Care. It is notable more than 8,100 jobs (42.3%) in the Site PMA are in the Health Care and Social Assistance sector.

Commuting Modes of Site PMA Workers

Table 13 presents a distribution of commuting modes for Site PMA and Montgomery County workers age 16 and older in 2015. The largest share (73.4%) of Site PMA workers drove alone, while 11.5% carpooled.

Economic Summary

The adverse impact of the previous national recession and the downturn in the automobile manufacturing industry in the Dayton area had a negative impact on the Montgomery County economy. Manufacturing is one of the most susceptible industries to slowdowns in the national economy, and it is no surprise that the area was adversely impacted by the national recession. Despite its dependence on manufacturing, it should be noted that the area also has a large presence of military/government, education and health care employment, which are typically more resistant to economic slowdowns.

Montgomery County underperformed both the state and the U.S. from 2001 to 2015. Most of the employment loss from 2008 to 2010 is attributed to the national economic recession, however total employment in the county has been on a downward trajectory since 2001, and remains far below the employment peak in that year. As a result, the net employment loss of 16.6% in Montgomery County was much greater than the Ohio decline of 3.2% during this time.

Although the unemployment rate for Montgomery County has declined since 2013, while county employment growth has risen, the majority of residents at Hilltop Homes and Desoto Bass who are employed likely work in low-paying sectors such as retail trade, food services or public administration. As the economy continues to improve, rent growth at market-rate properties is occurring at a higher rate than wage growth among low-income employees. The need for affordable housing targeting very low-to moderate-income households is especially important during periods of high rent growth.

VII. Rental Housing Supply Analysis

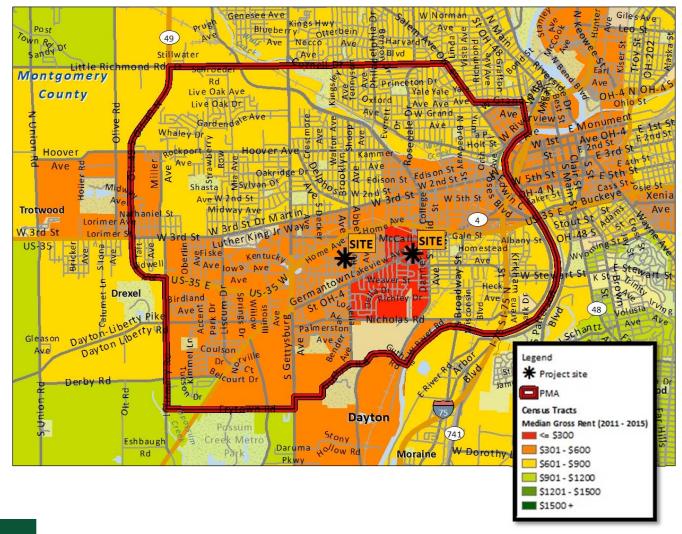

Overview of Rental Housing

We have analyzed demographic data collected by the American Community Survey (ACS) as well as conducted an in-person survey of existing rental housing. The following is a discussion of ACS data that impact the Dayton Site PMA and surrounding Dayton area. The following is a summary of the median gross rents for the Site PMA, as well as the city of Dayton and the State of Ohio.

| Median Gross Rent 2011 - 2015 (ACS) | | | | | | | | | |
|---|--|--|--|--|--|--|--|--|--|
| Site PMA City of Dayton Montgomery County State of Ohio | | | | | | | | | |
| \$600 | | | | | | | | | |

Source: American Community Survey; Urban Decision Group; VSI Note: gross rent is collected rent plus the cost of all necessary utilities

The following is a thematic map illustrating the median gross rent by census tract in and around the Site PMA.

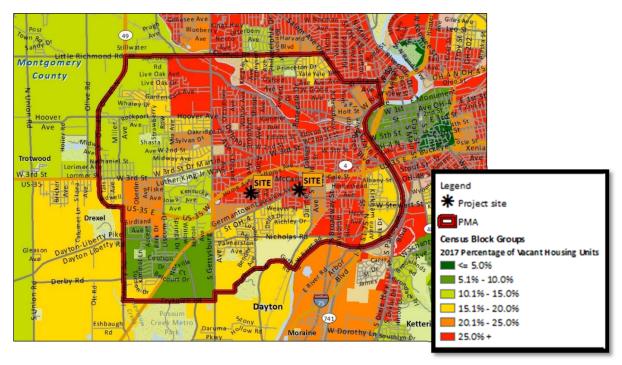

The following table summarizes the distributions of the area housing stock:

| Geographic | | 2010 (C | ensus) | 2017 (Est | imated) | 2022 (Pro | ojected) |

Source: 2010 Census; ESRI; Urban Decision Group; VSI

In 2017, the Site PMA is estimated to have a 26.5% vacancy rate among all housing units, while the city of Dayton and the state of Ohio have vacancy rates of 22.4% and 10.4% respectively. The largest share of the vacant housing statistic are represented by those homes that are no longer habitable and are functionally obsolete. The following table illustrates the housing vacancy rates by census tract block groups in and around the Site PMA.

The following table summarizes the distributions of the area vacant housing stock:

| Geographic | Vacant Housing | 2010 (0 | Census) |
|----------------|---------------------------|---------|---------|
| Area | by Type | Number | Percent |
| | For-Rent | 1,117 | 21.0% |

Source: 2010 Census; ESRI; Urban Decision Group; VSI

In 2010, approximately two-thirds of all vacant housing in the Site PMA was "other vacant," which includes dilapidated, functionally obsolete housing unsuitable for inhabitance. This is a significantly higher share of vacant units than the city of Dayton, or the state of Ohio.

Based on the 2011-2015 American Community Survey, the distribution of rental housing units by units in structure type for the Site PMA, the city of Dayton, Montgomery County and the state of Ohio follows:

| | Site | PMA | City of | Dayton | Montgomery County | | State of Ohio | |
|---------------------|--------|---------|---------|---------|--------------------------|---------|---------------|---------|
| Units in Structure | Number | Percent | Number | Percent | Number | Percent | Number | Percent |

Source: American Community Survey (2011-2015)

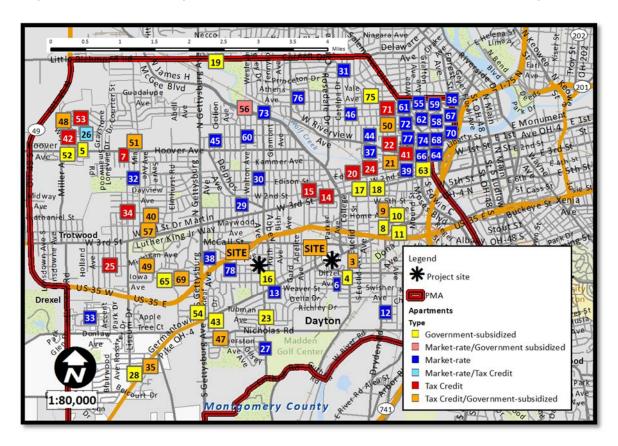

The Dayton Site PMA has a slighter higher share of single-family rental units than the city of Dayton as a whole. Conversely, there is a slightly smaller share of rental structures with 50 units or more in the Site PMA, as compared to the city of Dayton. However, the distribution of rental housing units by structure in the Site PMA is not significantly different than the city of Dayton.

Apartment Survey – Site PMA

We identified and personally surveyed 78 conventional rental housing projects containing a total of 4,152 units within the Site PMA during our in-person survey in May and June 2017. This survey was conducted to establish the overall strength of the rental market and to identify those properties that would be theoretically most comparable to modern, new construction that could potentially be supported in the site neighborhood or west side of Dayton. These rentals have a combined occupancy rate of 97.5%, a very high rate for conventional rental housing.

The following map illustrates the locations of all surveyed conventional rental projects in the Site PMA. Each surveyed conventional apartment project was given a map identification (ID) code, which corresponds to the Field Survey of Conventional Rentals found in Addendum A of this analysis.

The various surveyed apartment units are segmented by project type. Market-rate apartments are conventional apartments that operate without any government subsidies or rent/income restrictions. Tax Credit rental housing generally targets moderate-income households, often those with incomes between approximately 40% and 60% of the Area Median Household Income (AMHI). Residents in these units must earn annual incomes of at least a certain amount in order to afford the asking rents, but not more than

the maximum allowable income at 60% of AMHI (adjusted for household size). Government-subsidized rental housing technically targets households with incomes below 50% of AMHI. However, the majority of households living in subsidized rental housing typically earn less than 40% of AMHI. The following table summarizes the breakdown of conventional housing units surveyed by project type in the Site PMA. Note that we have primarily surveyed larger, conventional apartment projects in the Site PMA. In addition, we have surveyed a sampling of smaller, non-conventional rentals such as duplexes, single-family homes, privately owned condominiums in primarily owner-occupied communities, etc.

| Surveyed Conventional Rentals | | | | | | | | |
|-----------------------------------|----------------------|----------------|-----------------|-------------------|-----------------------|--|--|--|
| Project Type | Projects Surveyed | Total Units | Vacant Units | Occupancy Rate | Under Construction | | | |
| Market-rate | 33 | 957 | 83 | 91.3% | 188 | | | |
| Market-rate/Tax Credit | 1 | 31 | 0 | 100.0% | 0 | | | |
| Market-rate/Government-Subsidized | 1 | 124 | 0 | 100.0% | 0 | | | |
| Tax Credit | 12 | 732 | 2 | 99.7% | 0 | | | |

| Government-Subsidized | 19 | 1,415 | 17 | 98.8% | 28 | | | |
| Total | 78 | 4,152 | 102 | 97.5% | 256 | | | |

Source: VSI Field Survey

In general, as is common in most housing markets across the country today, the affordable rental units in the Dayton Site PMA are experiencing higher occupancy levels than the market-rate units. Overall, the demand for conventional apartments in the Dayton area is considered very strong. An ideal typical overall market occupancy rate for conventional apartments in a developed housing market similar to Dayton is approximately 95%. A 5% vacancy rate generally provides enough available rental options to allow current residents to migrate to other housing choices throughout the market. A vacancy rate of less than 5% indicates that overall market demand is exceeding the supply of available rental housing options. Currently, the demand for rental housing in the Dayton Site PMA exceeds the available supply.

It should be noted that there are a few market-rate apartment projects currently experiencing higher than typical vacancies. Specifically, Park Layne (Map ID 67) currently has 18 vacancies for an overall occupancy rate of 85.9%. The Riverstone Apartments (Map ID 70) currently has 12 vacancies for an overall occupancy rate of 85.9%. Grafton Hill Apartments (Map ID 72) currently has 13 vacancies for an overall occupancy rate of just 69.0%. These projects were built more than 30 years ago and are considered to have dated designs and overall aesthetic appeal, with quality ratings ranging from C to B.

There are currently 188 market-rate, 40 Tax Credit/government-subsidized and 28 government-subsidized rental units under renovation/construction within the Site PMA. Maplewood Manor (Map ID 78) currently has 140 units under construction. Commodore Apartments (Map ID 61) is currently undergoing renovations for all 48 units.

Non-Conventional Rentals (Duplexes, Single-Family Homes or Condos)

During our in-person evaluation of the Dayton rental market, VSI identified and surveyed 68 non-conventional rental units, including single-family rentals, duplex-unit rentals and other small communities with less than 10 units per project. Non-conventional rentals are defined as those rental units not within traditional rental communities. These non-conventional rentals are dominated by single-family homes. The following table summarizes these surveyed non-conventional rentals.

| Surveyed Non-Conventional Rentals | | | | | | | |
|-----------------------------------|-------|--------------|--------------------------|--|--|--|--|
| Bedrooms | Units | Distribution | Median Collected Rent | | | | |
| Studio | 9 | 13.2% | \$490 | | | | |
| One-Bedroom | 10 | 14.7% | \$467 | | | | |
| Two-Bedroom | 34 | 50.0% | \$563 | | | | |
| Three-Bedroom | 11 | 16.2% | \$774 | | | | |
| Four-Bedroom | 4 | 5.9% | \$1,033 | | | | |

Below are photographs of the types of non-conventional rentals that were surveyed during our in-person evaluation of the market to portray the quality and types of non-conventional rentals available. A map illustrating the location of all 68 non-conventional rental units surveyed follows.

Sample: Single-Family Rentals

Sample: Duplex Rentals

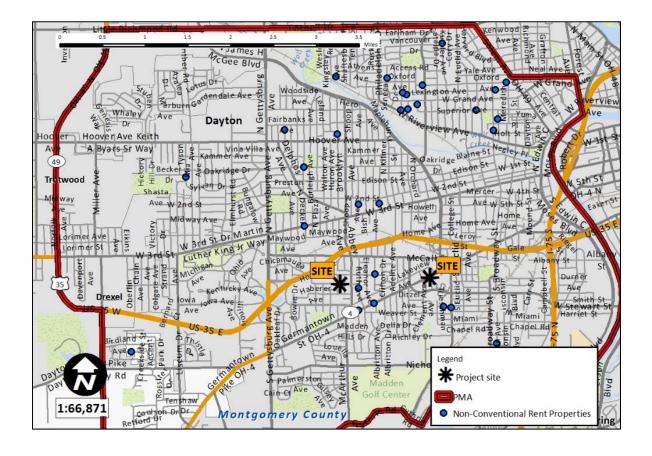

Sample: Small Building Rentals

Site PMA Conventional Non-Subsidized Apartments

The following table summarizes the breakdown of market-rate and non-subsidized Tax Credit units in conventional properties surveyed within the Site PMA. Note that we have provided rent data based on a gross rent, which includes the collected/asking rent plus the cost of tenant-paid utilities. Considering the fact that the subject sites and much of the conventional rental housing in the Site PMA is affordable, we have evaluated the gross rents, as opposed to the collected/asking rents. Affordable housing programs typically require the evaluation of the total cost of housing (collected rent plus tenant-paid utilities), while market-rate (non-income- or rent-restricted) are often more concerned with the collected/asking rent.

| | Market-rate | | | | | | | |

| Total Tax | Total Tax Credit 810 100% 2 0.2% | | | | | | | | |
| | Overall Median Tax Credit Rent | | | | | | | | |

Source: VSI Field Survey

The market-rate units are 91.6% occupied and the non-subsidized Tax Credit units are 99.8% occupied. This non-subsidized LIHTC occupancy rate is considered an extremely high occupancy rate, and is an indication of pent-up market demand for affordable rental housing in the Dayton Site PMA.

The overall median Tax Credit gross rent of \$774 is higher than the overall median market-rate gross rent of \$622. Typically, Tax Credit rentals need to be priced at least 10% below market in order to be perceived a value in the market. The Dayton Site PMA rental market is dominated by affordable rental housing and has a lower than typical share of quality market-rate rental opportunities.

^{*}No additional subsidies offered such as rental assistance

The following tables summarize the occupancies by bedroom type and targeted AMHI level for all non-subsidized Tax Credit units surveyed within the Site PMA.

| | Summary of Occupancies by Bedroom Type and AMHI Level | | | | | | | | | | | |

Source: VSI Field Survey Occ. – Occupancy

As illustrated above, the non-subsidized Tax Credit units in the market, regardless of income targeting, have excellent occupancy levels. The only (two) vacancies found in non-subsidized LIHTC units in the Site PMA are in the 60% AMHI units. Regardless, the 99.5% occupancy rate among these 60% AMHI units indicates significant pent-up market demand for Tax Credit housing at all targeted income levels.

The following is a distribution of non-subsidized apartment (both market-rate and non-subsidized Tax Credit) units surveyed by year opened for the Site PMA:

| Year Opened | Projects | Units | Vacancy Rate | |
|--------------|----------|-------|--------------|--|
| Before 1970 | 27 | 757 | 8.7% | |
| 1970 to 1979 | 6 | 207 | 2.9% | |
| 1980 to 1989 | 1 | 84 | 14.3% | |

Source: VSI Field Survey

The greatest period of rental housing development in the Dayton Site PMA was prior to 1970. The majority of vacant units in the market are among rental units built prior to 1990, indicating greater demand for more modern rental housing. Limited conventional apartment development has occurred, with the most recently built communities all being affordable communities. There is a significant lack of modern, quality, market-rate rental housing in the Dayton Site PMA. Part of the reason for the higher vacancies found in market-rate rental units is due to the lower quality of these units. Higher quality market-rate rental units in the Dayton area are performing at higher occupancy rates than those rental communities rated lower.

Although households have declined over the past decade, the lack of modern rental housing combined with the currently high occupancy rates among the existing modern rental product indicates that some pent-up market demand exists for additional modern rental housing opportunities. As existing housing stock built prior to 1970 continues to age and become functionally obsolete, new rental housing must be developed to help fill the void or households may leave the area for more modern alternatives. The Dayton Site PMA has potential for additional rental housing development as evidenced by the high occupancy rates for better quality alternatives.

We rated each market-rate property surveyed on a scale of A through F. Our rating system is described as follows, with + and - variations assigned according to variances from the following general descriptions:

- A Upscale/high quality property
- B Good condition and quality
- C Fair condition, in need of minor improvements
- D Poor condition
- F Serious disrepair, dilapidated

^{*}As of June

All market-rate properties were rated based on quality and overall appearance (i.e. aesthetic appeal, building appearance, landscaping and grounds appearance). The following is a distribution of units, vacancies, and median gross rents by quality rating.

| | Market-rate F | Properties | | Median Gross Rent* | | | | |
|---------|---------------|------------|---------|--------------------|-------|---------|---------|--|
| Quality | | Total | Vacancy | | One- | Two- | Three- | |
| Rating | Projects | Units | Rate | Studio | Br. | Br. | Br. | |
| A- | 2 | 10 | 10.0% | - | - | \$878 | \$2,061 | |
| B+ | 2 | 274 | 7.3% | \$483 | \$568 | \$1,052 | \$1,498 | |
| B- | 15 | 472 | 8.1% | \$578 | \$588 | \$614 | \$1,124 | |
| C+ | 6 | 74 | 20.3% | \$335 | \$435 | \$624 | \$699 | |
| С | 7 | 118 | 5.1% | \$452 | \$465 | \$539 | \$874 | |
| C- | 1 | 36 | 5.6% | - | - | \$579 | \$722 | |
| D | 1 | 4 | 25.0% | - | - | \$547 | - | |

Source: VSI Field Survey

In general, the higher quality units in the Site PMA are achieving higher rents than the lower quality projects. Most of the surveyed non-subsidized rental projects (30) in the Site PMA, containing a total of 703 units, are found in the lower quality (B- or lower) rental product. Note that there are only two projects with A- quality ratings and only two projects with B+ quality ranges. These four projects are achieving gross rents significantly higher than the lower quality projects.

Planned and Under Construction Multifamily Development

According to the various officials with the city of Dayton, there are no officially planned multifamily developments within the Site PMA. As detailed earlier in this section, one of the surveyed market-rate properties has 140 additional market-rate units under construction, which are anticipated to be complete by July 2018. The other under construction units reported in our survey are not new units being added to the market, rather they are existing units that are undergoing renovations.

There are a few development projects located outside of the Site PMA in the downtown Dayton area which include the Peru Tower redevelopment, the Water Street project and the Delco Building redevelopment. These projects plan to offer only market-rate apartments and will not be competitive with a new affordable housing development in the site area.

^{*}Adjusted to account for the collected/street rent plus the cost of all necessary utilities

Buy Versus Rent Analysis

Often for-sale housing choices represent a viable option for renters. This was particularly true during the previous decade when renters were enticed to leave rental housing with low interest "no-doc" loans. While this trend has slowed dramatically, this analysis considers this scenario in which renters may be enticed to purchase a home in the area. The median home value within the Site PMA is estimated to be \$61,688. At an estimated interest rate of 5.0% and a 30-year term (and 95% LTV), the monthly mortgage for a \$61,688 home is \$430, including estimated taxes and insurance.

| Buy Versus Rent Analysis | | | | | | | |
|--|----------|--|--|--|--|--|--|
| | Overall | | | | | | |
| Median Home Price | \$61,688 | | | | | | |
| Mortgaged Value = 95% of Median Home Price | \$58,604 | | | | | | |
| Interest Rate - Bankrate.com | 5.0% | | | | | | |
| Term | 30 | | | | | | |
| Monthly Principal & Interest | \$315 | | | | | | |
| Estimated Taxes & Insurance* | \$79 | | | | | | |
| Estimated Private Mortgage Insurance** | \$37 | | | | | | |
| Estimated Monthly Mortgage Payment | \$430 | | | | | | |

^{*}Estimated at 25% of principal and interest

With a median home price within the Site PMA of \$68,688, a conventionally financed home would require an estimated monthly mortgage payment of \$430. The median gross rents among surveyed B+ and Aquality two-bedroom rental units in the Site PMA range from \$878 to \$1,052. Therefore, the estimated monthly mortgage cost of a typical Site PMA home is significantly less expensive than the cost of a high quality (B+ to A-) quality rental property in the Dayton area. Although residents that would be attracted to a new, quality rental development at the site would likely have the economic means to purchase a home, we anticipate a new development will appeal to households who desire the rental opportunity, rather than homeownership. A small portion of renters in quality, modern, more expensive apartment units in the Site PMA are always likely be lost to homeownership on an annual basis. However, this component is not anticipated to be significant given the current trends and preferences among renter households. For-sale housing options in the Dayton area are discussed in further detail in Section VIII of this target market study.

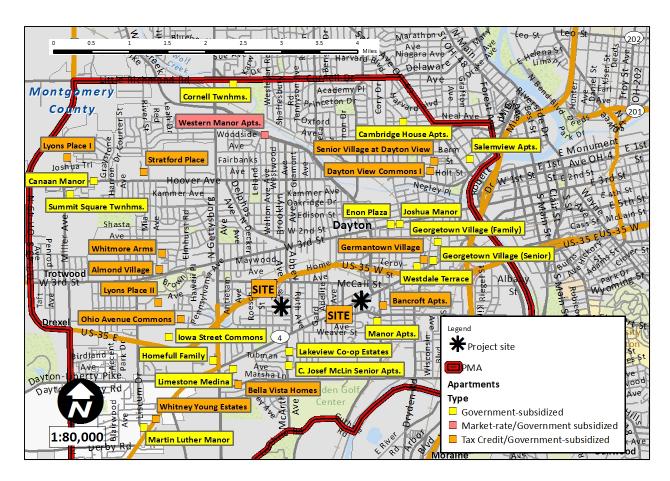

^{**}Estimated at 0.75% of mortgaged amount

Site PMA Government-Subsidized Properties

VSI surveyed 32 government-subsidized projects within the Dayton Site PMA. These projects operate under a variety of subsidies, including the HUD Section 8, HUD Section 811 PRAC, HUD Section 202 and 202 PRAC, as well as Public Housing programs. Generally, these properties have few amenities, are older and offer small unit sizes (square footage). The summary of government-subsidized units (both with and without Tax Credits) in the Site PMA follows, as does a map of their locations relative to the subject site.

| Subsidized Tax Credit | | | | | | | | | |

Source: VSI Field Survey

Nearly all of the subsidized Tax Credit and exclusively subsidized units surveyed in the Site PMA are 100% leased. Note that units that are vacant but being prepped for occupancy are considered occupied in this analysis. Of the 32 surveyed subsidized projects, 30 are fully occupied. This is a clear indication of pentup market demand for affordable rental housing in Dayton. Furthermore, most of these subsidized projects currently maintain waiting lists.

Our complete field survey of conventional apartments, as well as an apartment location map, is in Addendum A, Field Survey of Conventional Rentals.

Site PMA Low-Income Housing Tax Credit (LIHTC) Properties

We surveyed 25 properties within the Dayton Site PMA that have been developed or renovated under the Low-Income Housing Tax Credit (LIHTC) program, including non-subsidized, subsidized and mixed-income projects. These existing, surveyed Tax Credit rental projects in the Site PMA include the following:

| | All Low-Income Housing Tax Credit Projects | | | | | | | | | |

*Market-rate units not included

The 25 LIHTC projects have a combined total of 1,647 Tax Credit units with an overall occupancy rate of 99.9%, indicating very strong demand for quality affordable housing in the market. Some of these surveyed projects have some project-based government-subsidized/Tax Credit units, allowing residents to pay 30% of their income toward rent. The 810 non-subsidized Tax Credit units in the Site PMA have an overall occupancy rate of 99.8%.

Comparable Affordable/Tax Credit Properties

For the purpose of this market analysis and feasibility study, we have evaluated in detail the most modern, highest quality affordable rental choices in the Site PMA. These projects represent the most comparable affordable rentals to a new development that may be built at the site. Nine affordable rental projects have been developed in the past 10 years. The nine selected LIHTC properties are summarized as follows (information regarding property address, phone number and utility responsibility is included in the one-page profiles found in this section). Note that distance to site has been calculated from the largest of the two sites, Desoto Bass Courts.

Occup. – Occupancy Rate
H.H. – Households
Q.R. – Quality Rating
N.R. – Neighborhood Rating
*Market-rate units not included

Shaded rows denote senior-restricted properties

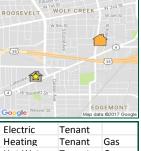

All nine of the comparable affordable rental projects are 100% occupied, clearly indicating pent-up market demand for modern, quality, affordable rental housing in the Site PMA.

The following are one-page profiles of the selected comparable Tax Credit projects.

SUB – Subsidized (residents pay 30% of their incomes, as this is a government-subsidized property that also operates under the Tax Credit program)

As illustrated in the preceding table, many of the most modern LIHTC rental projects are achieving gross Tax Credit rents near the maximum allowable limits. It is likely that a new rental development could potentially achieve gross rents similar to the maximum allowable limits, assuming it was comparable to and competitive with the existing, most recently developed, highest quality affordable projects in the area. However, the higher the rents charged, the fewer the lowest income households can be served.

The comparable properties' square footage and number of bathrooms are illustrated in the following tables:

| | | | : | Square Footage | | |
|-----|------------------------|-----------|---------------|----------------|---------------|-------|

Source: VSI Field Survey

The preceding tables illustrate the typical unit sizes and number of bathrooms offered at the most modern affordable rental options in the Dayton Site PMA. The weighted average unit sizes range from 596 square feet for a one-bedroom unit, 1,078 square feet for a two-bedroom unit, 1,283 square feet for a three-bedroom unit, 1,607 square feet for a four-bedroom unit and 1,695 square feet for a five-bedroom unit. The two-bedroom and larger bedroom types offer unusually large unit sizes when compared to product being developed outside the Site PMA.

The following tables compare the appliances and the unit and project amenities of existing Tax Credit properties in the market.

Comparable Market-Rate Properties

Based on the evaluation of the Dayton area rental housing market and the lack of modern, high-quality rental housing opportunities, the primary target demographic base of potential tenants for most sites developed in urban/downtown areas are often individuals and households from the millennial generation (Generation Y; Echo Boomer). Millennials are generally defined as the children of baby boomers with birth dates ranging from the 1980s and into the 1990s. Nationally, it is expected that approximately 80 million members of Generation Y will hit their prime renting years in a steady stream over the next decade. Housing trends for this generation are of importance as there have not been so many young people reaching their late 20s and early 30s since the Baby Boomer generation in the 1970s.

Based on anecdotal information provided by national developers and also based on our own field observations, the Generation Y cohort is a diverse demographic that is seeking different living alternatives complementary to their fast-paced and ever increasingly technology-based lifestyle. Over the past several years, developers have been experimenting with different housing products and amenities that are most desirable to millennials. The following are amenities/development attributes popular among the millennial generation (in no particular order) and therefore, it is suggested that they be considered part of the development concept to not only attract younger households, but to also retain their residency within the community as the millennial moves through the housing continuum.

The second largest targeted demographic segment of potential urban dwellers is empty-nester baby boomers in search of a maintenance-free living alternative within proximity of entertainment, restaurants, shopping and community services. Pew Research and other reputable research organizations have stated that the housing preferences of these empty-nester baby boomers and millennials are similar.

- On-site Fitness Center: Many property managers report that on-site fitness centers are the most asked about amenity among prospective millennial renters. Even with the presence of nearby fitness centers, on-site centers are preferred and considered to be a notable amenity. Tanning beds are often found in these fitness centers, as well as some spa features including massage therapy, manicures, pedicures, facials, hair removal, etc.
- <u>Business Center:</u> Millennials need to be connected. The business center not only provides access to the desired technology but also creates an environment for group collaboration and socialization. The business centers should not be designed with the "traditional" office space in mind, but should resemble more of a lounge where business and socialization activities can co-exist.
- <u>Kiosks:</u> This amenity is described as machines similar to those one might use at an airport to print a boarding pass. Generation Y seeks the same convenience and independence to be able to pay their rent online or at a computerized kiosk station available to accept payment from their debit or credit card. The kiosk also becomes the community bulletin board where one may find out about a certain entertainment event or that a fellow resident is looking to sell some furniture. The screen and keyboard are now replacing the paper and thumbtack.
- <u>Expanded Bandwidth</u>: Often, millennials are moving straight from their dorm to a new apartment (although typically not at the high-end of the market) and are expecting the same bandwidth connectivity to access their devices. Special consideration should be made to internet access, whether it is cable, DSL (dedicated service line), fiber optics or wireless.
- <u>Charging/Dock Stations:</u> Technology and a means to power electronic devices is a necessity to millennials. Integrated docking stations can be incorporated into residential units at a relatively low price point.
- <u>Upgraded and Unique Finishes:</u> Luxury finishes, such as natural surface flooring (wood, stone, polished concrete, etc.) and granite countertops and stainless steel appliances are desired amenities among millennials and the inclusion of luxury finishes will give a respective development a competitive advantage. Furthermore, unique characteristics such as exposed brick walls, high ceilings, large windows, lofts and open heating/cooling ducts are some examples of unique unit characteristics that are considered appealing to young professionals. In addition, unique community characteristics can also increase marketability, such as rooftop gardens or patios with views of downtown, movie theaters and/or bowling lanes in the building.

There are no significant modern, quality rental housing choices offered in the Dayton Site PMA. Part of the reason may be due to the economic characteristics of the area and the fact that the site PMA is a lower income area than other parts of Dayton. However, as discussed in the "Demographic and Crime Analysis" portion of this target market study found in Section V, there are income-eligible renter households with incomes above what is necessary to afford a quality, modern, market-rate apartment unit. The table below illustrates that currently, there are an estimated 2,053 renter households (in 2017) that have annual incomes of more than \$30,000. Specifically, those renter households represent 23% of all renter households in the Site PMA. Although most of the renter households in the Site PMA are lower income households, there are income-eligible renters in the area, and a limited supply of high-quality market-rate rental choices. This indicates a demographic support base for modern, quality, market-rate apartment development in the Dayton Site PMA.

| Household | Site PMA: Renter Households 2017 (Estimated) | | | | | |
|------------------------|--|----------|----------|----------|-----------|-------|
| Income Range | 1-Person | 2-Person | 3-Person | 4-Person | 5-Person+ | Total |

Source: 2010 Census; Ribbon Demographics; ESRI; Urban Decision Group; VSI

The inability to attract younger households early in their residential search can be detrimental to long-term population and household demographic levels, as younger households may be more apt to progress through the housing continuum in other neighborhoods or nearby cities. Research and trends are indicating that younger households today are postponing homeownership, as it is not currently perceived as attractive a living alternative as renting. Factors contributing to this include, but are not limited to, the following:

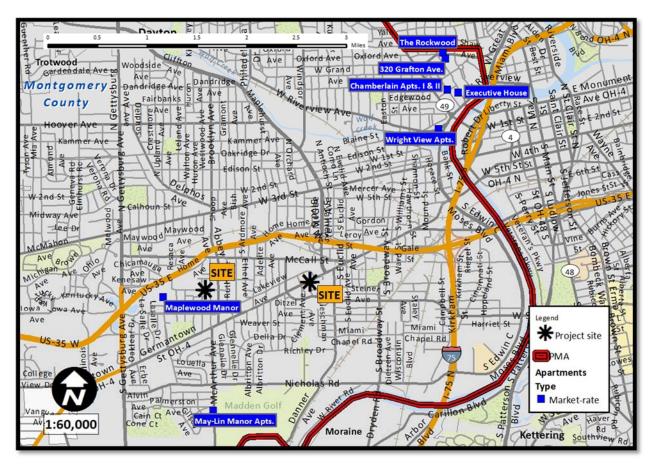

- Easier mobility to explore employment opportunities in other cities
- Less commitment
- Discouraged to purchase as a result of recent housing and economic recession
- Rental alternatives typically have more convenient access to community services (retail, restaurants, entertainment, etc.)
- Renting offers a more leisurely and maintenance-free lifestyle
- Lack of sufficient assets to produce a down payment
- Rental alternatives offer extensive property amenities typically not associated with single-family homes (swimming pools, exercise facilities and business centers)
- Student debt

We have selected the seven most modern, highest quality market-rate apartments in the Dayton Site PMA for illustrative purposes. These seven comparable properties are summarized in the following table, and a map of their locations relative to the subject site locations follows.

| | Comparable Market-Rate Projects | | | | | | | |

None of the comparable properties are offering any types of discounts on rent, which is not surprising given the extremely high occupancy rates. The term "net" means that all rents have been adjusted to reflect the tenant utility responsibility, assuming the cost of cold water, sewer and trash collection is included in the monthly rent. Our estimates of utility costs are based upon utility allowances provided by the local housing authority. The following is a summary of gross rents among the comparable properties.

| | | Gross Rent (Units) | | | | |
|-----|--------------------------|--------------------|------------------|------------------|-----------------|--|

Source: VSI Field Survey

Considering the increasing share of one- and two-person renter households projected by ESRI and the American Community Survey, we anticipate demand for smaller bedroom types (one- and two-bedroom) will remain strong. It should be noted that four- and five-person or larger renter households in the Site PMA are projected to decline over the next five years. Typically, these households migrate toward single-family rental homes. As discussed, there is a significant base of modest quality single-family homes. Demand for smaller unit types is anticipated to increase over at least the next five years.

The unit sizes (square footage) and number of bathrooms included in each of the different unit types offered in the market are compared in the following tables (note: includes garden units only).

Source: VSI Field Survey

Some of the most modern, highest quality, market-rate comparable projects offer a variety of floor plans among each bedroom type. For instance, Wright View Apartments (Map ID 39) offers one-bedroom/1.0-bath units as small as 615 square feet in size and as large as 700 square feet in size. More modern, larger rental projects typically offer a variety of floor plans. This strategy allows properties to respond to a broader base of qualified households as well as empty-nesters who generally prefer more living space. A new development in the site neighborhoods would certainly benefit from offering comparable unit sizes, and from also offering a variety of floor plans among each bedroom type.

In larger, more urban markets with high rent levels that have increased significantly over the past five to 10 years, studio units are becoming more prevalent and marketable. However, in the Site PMA, on the west side of Dayton, this (studio) unit type is significantly less prevalent and less necessary considering the lower incomes and lower rent levels in the area.

The gross rent (which is the collected/street rent adjusted to assume the cost of cold water/sewer and trash removal is included in the collected/street rent) per square foot for each competitive unit is compared in the following tables (note: all comparable property rents include concessions and discounts, and are current rents).

| | | Studio Rent per Square Foot | | | | | | |

| 78 | Maplewood Manor | 1.0 | \$579 | 800 | \$0.72 |
| | Wei | ghted Average | \$662 | 868 | \$0.76 |

| | | Three-Bedroom Rent per Square Foot | | | | | |
|-----|-----------------|------------------------------------|---------------|--------|-----------------|--|--|
| Map | | Number of | | Square | Rent Per | | |
| ID | Project Name | Baths | Adjusted Rent | Feet | Square Foot | | |
| 55 | The Rockwood | 2.0 | \$1,124 | 1,368 | \$0.82 | | |
| 78 | Maplewood Manor | 2.0 | \$722 - \$757 | 950 | \$0.76 - \$0.80 | | |
| | We | ighted Average | \$996 | 1,229 | \$0.81 | | |

As illustrated in the preceding tables, the typical gross rents per square foot range from approximately \$0.76 to \$1.17 for different unit/bedroom types. However, considering the age of these projects and the quality ratings, a new, A or A+ quality rental community offering a modern design and appealing amenities could achieve higher rents. This is especially true considering the weighted average median gross rents at the Low-Income Housing Tax Credit projects are higher than many of the gross rents being achieved in the market-rate product.

The following table compares the amenities of the most comparable projects in the market.

A complete field survey of all conventional apartments we surveyed, as well as an apartment location map, is included in Addendum A "Field Survey of Conventional Rentals."

Comparable Rental Housing Conclusions

Based on the preceding evaluation, as well as our experience analyzing urban and suburban rental markets across the country, the following tables summarize the typical amenities and features found in the high-quality, modern, comparable rental projects, as well as the more upscale amenities and features offered. Although, it should be noted that these upscale and modern finishes/amenities are not found in the existing conventional apartments on the west side of Dayton, they are found in downtown rentals and more upscale suburban locations of Dayton. In addition to typical high-quality, modern rental projects in urban markets, we also provided a table of features and amenities that are more unique to urban markets and would help a newly developed project in the site neighborhoods compensate for other factors and keep development costs, and resulting asking rents, lower.

| List of Typical Amenities and Features | | | | | |
|--|--------------------------|-----------------------------|--------------------------|--|--|
| Unit An | nenities | Project/Commu | unity Amenities | | |
| Range | Central Air Conditioning | On-site Management | Community/Lounge Space | | |
| Refrigerator | Washer/Dryer Hookups | Laundry Facilities | Business/Computer Center | | |
| Dishwasher | Intercom/Security System | Property Video Surveillance | Fitness Center | | |
| Garbage Disposal | Window Blinds | | | | |
| Microwave Oven | Ceiling Fans | | | | |

| | Upscale Amenities and Features | | | | | |
|-------------------|--------------------------------|--------------------|-----------------------|--|--|--|
| Unit A | menities | Project/Comm | unity Amenities | | | |
| High Ceilings | Granite Counters | Rooftop Garden | Courtyard/Green Space | | | |
| Oversized Windows | Stainless Steel Appliances | Billiards Room | Tanning Salon | | | |
| Patios/Balconies | Wood Flooring | Movie Theater Room | Bowling Alley | | | |
| Loft | Upgraded Molding | | | | | |

| Space from Sleepir | ng Space, if Desired | Page that can be Tweete | d/Accessed in Real-Time | | |

A new development in the site neighborhoods will need to at least offer the typical amenities and features. In addition, given the lack of recent market-rate apartment development that has occurred in and around the west side of Dayton, we recommend unique features also be considered. The more upscale and/or unique amenities and features that are offered, the smaller the unit sizes can potentially be and still be considered acceptable and appealing. Unique features will help to increase the marketability of the site neighborhoods, which are characterized as lower-income neighborhoods with fewer rental options. Unique features and designs will help to attract renters to the site neighborhoods, who currently would not consider the sites as realistic housing choices. While affordable housing is in high demand in the site neighborhoods, there is also market demand and demographic support for non-income-restricted rental choices.

Overall, based on the performance of existing area comparables compared to modern conventional rental housing that has been developed successfully in other similar-sized cities in the region, we have established appropriate (and potentially achievable) gross rents for new market-rate rental units in the site neighborhood. Note that the incomes of existing renter households in the Site PMA has also been considered when determining the potentially achievable/appropriate market-rate gross rents.

| Recommended/Appropriate Market-Rate Unit Sizes and Gross Rents | | | | | |
|--|---------------|-------------------|-----------------|--|--|
| | | | Gross Rent | | |
| Bedrooms/Baths | Square Feet | Gross Rents | Per Square Foot | | |
| Studio/1.0-Bath | 450 - 550 | \$540 - \$685 | \$1.20 - \$1.25 | | |
| One-Bedroom./1.0-Bath | 650 - 750 | \$745 - \$900 | \$1.15 - \$1.20 | | |
| Two-Bedroom/1.0-2.0-Bath | 900 - 1,050 | \$900 - \$1,155 | \$1.00 - \$1.10 | | |
| Three-Bedroom/2.0-Bath | 1,200 - 1,350 | \$1,080 - \$1,350 | \$0.90 - \$1.00 | | |

Based on the demographic characteristics of this market, as well as the existing rental housing supply and the projected demographic changes, we have provided unit mix recommendations for a new market-rate development. This does not consider the demographic support or market demand for affordable rental units, which was previously discussed.

| | Recommended/Appropriate Market-Rate Unit Mix for Site or Downtown Apartments | | | | |
|-------------------------------------|--|--|--|--|--|
| Recommended Bedrooms Share of Units | | | | | |
| Studio | <5% | | | | |
| One-Bedroom | 50% - 60% | | | | |
| Two-Bedroom | 30% - 40% | | | | |
| Three-Bedroom | <10% | | | | |

Note that lower proposed rents at a new development increase the share of units that can potentially be supported due to a larger base of "step-up" support potential. Individuals/couples often would prefer a larger unit if the price was affordable. This is especially true considering that existing conventional apartments are not achieving high rents. Considering demographic trends and existing housing opportunities, there is a greater demand for affordable rental units that are larger in sizes, such as three-and four-bedroom units. For market-rate rental units, it is recommended that additional smaller units be developed.

A new development at one of the subject sites will likely create a new housing opportunity that is not currently available on the west side of Dayton, and will likely need to be priced well above existing conventional apartment rents in order for the development to be economically feasible for a developer. Obviously, VSI has not evaluated building costs or other costs/risk associated with developing and constructing an apartment project. Additional subsidies may be necessary to enable a developer to provide market-rate housing. However, the purpose of this market study and feasibility analysis is to evaluate the market support for additional housing.

A demographic support analysis is found in Section IX of this analysis, which indicates the potential number of rental units that can be supported in the Dayton Site PMA.

VIII. For-Sale Housing Supply Analysis

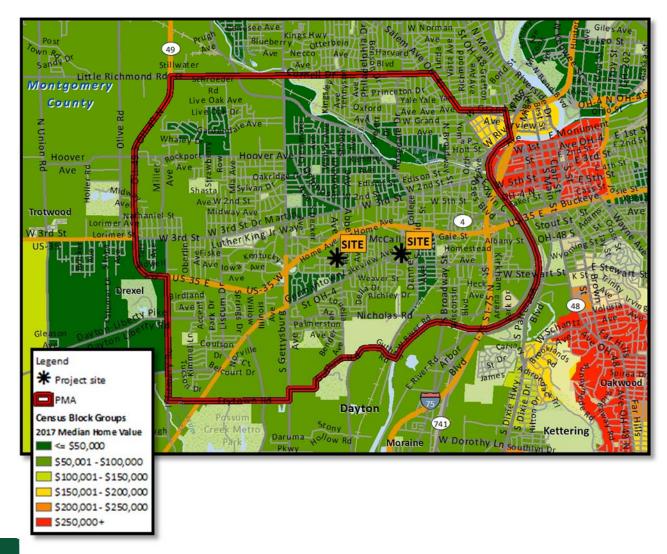

Overview of For-Sale Housing

We have analyzed demographic data as well as conducted a survey of existing for-sale/owner-occupied housing opportunities. The following is a discussion of demographic data that impact the various markets. The following is a summary of the median home values for the Dayton Site PMA, as well as the city of Dayton and the state of Ohio.

| Median Home Value 2017 (Estimated) | | | | |
|---------------------------------------|----------------|---------------|--|--|
| Dayton Site PMA | City of Dayton | State of Ohio | | |
| \$61,688 | \$74,562 | \$141,479 | | |

Source: 2010 Census; ESRI; Urban Decision Group; VSI

The following is a thematic map illustrating the median home values by census tract block groups in and around the Dayton Site PMA.

The following table illustrates estimated owner-occupied housing values for 2010, estimated for 2017 and projected to 2022 within the Dayton Site PMA, followed by the city of Dayton and the state of Ohio:

| Dayton Site PMA: Median Home Values | | | | | | |

Trulia For-Sale Overview

Trulia, a fully owned subsidiary of the Zillow Group, provides online real estate resources for local markets. The Zillow Group was founded in 2006 and currently has data on more than 110 million homes across the country. In addition to giving home value estimates of homes, it offers several features, including value changes of each home in a given time frame (such as one, five or 10 years), aerial views of homes and prices of comparable homes in the area. While the Zillow Group can access appropriate public data (through tax assessor data, or other official record-keeping groups), it also provides basic information on a given home, such as square footage and the number of bedrooms and bathrooms. Information is gathered and maintained regarding sales activity of homes, list prices, days on market, sales prices, etc. The Zillow Group maintains accurate and up-to-date statistical information databases on homes across the country, including the neighborhoods within the Dayton Site PMA, the city of Dayton and the state of Ohio.

The following is a summary of the performance of for-sale housing in the sites' neighborhoods (Pineview and Miami Chapel) according to Trulia. The map below illustrates the median listing price for a for-sale home is below \$75,000 for most areas located north, east and west of downtown Dayton.

| Trulia Housing Overview | | | | |
|---|-------------------------|--|--|--|
| Hilltop Homes | | | | |
| | (Pineview Neighborhood) | | | |
| Median Sales Price | \$28,500 | | | |
| Median Price Per Square Foot \$26/Square Foot | | | | |

Source: Trulia (March 1 through May 31, 2017)

| Trulia Housing Overview | | | | |
|------------------------------|-----------------------------|--|--|--|
| Desoto Bass Courts | | | | |
| | (Miami Chapel Neighborhood) | | | |
| Median Sales Price | \$17,950 | | | |
| Median Price Per Square Foot | \$18/Square Foot | | | |

Source: Trulia (March 1 through May 31, 2017)

According to Trulia, the homes located in the Pineview and Miami Chapel neighborhoods were typically built between 1930 and 1960. The homes located in the site neighborhoods are typically in need of repair and have considerable deferred maintenance. The median sales prices for the two neighborhoods range from just \$17,950 to \$28,500. It should be noted that these median sales prices are significantly lower than the Site PMA as a whole, and even lower than the city of Dayton. This exemplifies the fact that the site neighborhoods have significantly lower home values than the rest of the city.

Zillow For-Sale Overview and Historic Data

The Zillow Group provides details on the average monthly home listings. The following table compares the average monthly home listings per year for the Dayton Site PMA, the city of Dayton and the state of Ohio.

| Average Monthly Home Listings by Year | | | | | | |
|---------------------------------------|---------------|---------|----------------|---------|---------------|---------|
| | Dayton Site | PMA | City of Dayton | | Ohio | |
| | Average Homes | Percent | Average Homes | Percent | Average Homes | Percent |
| Year | on Market | Change | on Market | Change | on Market | Change |
| 2013 | 176 | - | 788 | - | 54,068 | - |
| 2014 | 155 | -11.9% | 660 | -16.2% | 51,569 | -4.6% |
| 2015 | 155 | 0% | 694 | +5.2% | 49,633 | -3.8% |
| 2016 | 151 | -2.6% | 637 | -8.2% | 44,866 | -9.6% |
| 2017* | 104 | -31.1% | 483 | -24.2% | 37,131 | -17.2% |
| Overall Change | | | | | | |
| (2013 – 2017*) | -40.9% | | -38.7% | | -31.3% | |

Source: Zillow *Through April

The average monthly home listings in the Dayton Site PMA have declined considerably over the past few years. However, the decline in home listings is similar to that of the city of Dayton and the state of Ohio.

The average number of days on the market for for-sale homes within the city of Dayton and the state of Ohio is compared in the following table.

| Average Days on Market – 2017 | | | |
|-------------------------------|---------|--|--|
| City of Dayton Ohio | | | |
| 73 Days | 96 Days | | |

Source: Zillow

For-sale homes in the city of Dayton generally stay on the market for 73 days, or about 32% less time than homes in the city of Dayton.

The Zillow Group also establishes their own value estimate (or "Zestimate"). Note that this is different than the ESRI estimates illustrated earlier in this analysis. Although the median values differ, the general conclusions and take-aways are similar. The benefit to providing a "Zestimate" comparison is that the Zillow Group differentiates single-family homes from condominiums. The following table summarizes the "Zestimate" findings.

| | Median "Zestimate" Per Year | | | | | | | | |
|----------------|-----------------------------|--------------|----------|----------------|--------|----------|-----------|-----------|-----------|
| | Da | yton Site PI | MA | City of Dayton | | | Ohio | | |

Source: Zillow N/A- Not Available *Through April

The "Zestimate" value of single-family homes is typically higher than the "all homes" value for the Dayton Site PMA, city of Dayton and the state of Ohio. This indicates that the value of a single-family home is higher than that of a condominium. Note that due to the insignificant amount of data for condominiums within the Dayton area, "Zestimates" for condominiums are not provided. However, the "all homes" category includes both single-family homes and condominiums.

The Zillow Group provides detailed sales statistics of sold homes in Dayton Site PMA (the neighborhoods and ZIP codes in which data was available), the city of Dayton and the state of Ohio. The average sales prices for these three geographic areas are compared in the following table for 2012 through 2016.

| | Average Sales Price by Year | | | | | | |
|----------------------------------|-----------------------------|---------|-------------|---------|-------------|------------|--|
| | Dayton S | ite PMA | City of | Dayton | Oh | Ohio | |
| | Average | Percent | Average | Percent | Average | Percent | |
| Year | Sales Price | Change | Sales Price | Change | Sales Price | Change | |
| 2012 | \$39,114 | - | \$50,646 | - | \$111,960 | - | |
| 2013 | \$27,789 | -29.0% | \$52,242 | +3.2% | \$120,387 | +7.5% | |

Source: Zillow

*Through June (1/2 year data available)

As illustrated in the preceding table, the sales prices in the Dayton Site PMA are well below the city of Dayton and the state of Ohio. This is not surprising considering the demographic characteristics of the Site PMA indicate the west side of Dayton is a lower-income area than the city of Dayton as whole.

The average sales prices per square foot for Dayton Site PMA, the city of Dayton and the state of Ohio are compared in the following table.

| Average Sales Price per Square Foot by Year | | | | | | |
|---|---------------|---------|---------------|---------|---------------|---------|
| | Dayton Site | e PMA | City of Da | yton | Ohio | |
| | Average Sales | Percent | Average Sales | Percent | Average Sales | Percent |
| Year | Price/S.F. | Change | Price/S.F. | Change | Price/S.F. | Change |
| 2012 | \$26.17 | - | \$44.12 | - | \$74.19 | - |
| 2013 | \$19.10 | -27.0% | \$41.90 | -5.0% | \$78.89 | +6.3% |
| 2014 | N/A | - | \$43.58 | +4.0% | \$83.11 | +5.3% |
| 2015 | \$25.86 | - | \$49.58 | +13.8% | \$86.21 | +3.7% |
| 2016* | \$26.79* | +3.6% | \$50.62 | +2.1% | \$89.11 | +3.4% |

Source: Zillow S.F. – Square Foot

*Through June (1/2 year data available)

The average sales price per square foot in 2016 for the Dayton Site PMA was approximately \$23 less than the city of Dayton and nearly \$62 less than the state of Ohio.

The following table illustrates the reported percentage of existing homes that were sold in the past year, according to the Zillow Group, for Dayton Site PMA, the city of Dayton and the state of Ohio.

| Percent of Existing Homes Sold (Past 12 Months) – Turnover | | | | |
|--|---------------------|------|--|--|
| Dayton Site PMA | City of Dayton Ohio | | | |
| 1.6% | 5.1% | 3.9% | | |

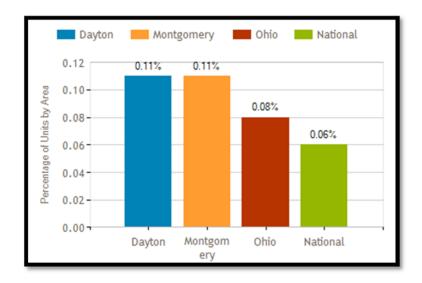

Source: Zillow April 2016 – April 2017

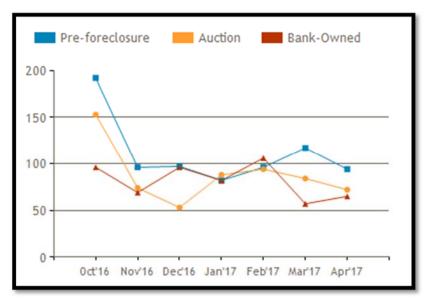

This table illustrates that in the Dayton Site PMA, 1.6% of the existing owner-occupied homes were sold over the past year. The percent of homes sold within the city of Dayton (5.1%) is higher than the Dayton Site PMA and the state of Ohio (3.9%). This low share likely reflects the number of older adult households who choose to remain in their home in the PMA. Another explanation is that there are few choices available elsewhere at the price point in which the Site PMA household is able to sell their home for.

RealtyTrac Foreclosure Overview

RealtyTrac is an online real estate database tool that provides foreclosure statistics and properties. The number and type of foreclosures are tracked and reported in various comparisons. Based on statistics provided, only one (1) in every 1,340 housing units in Dayton Site PMA is currently going through foreclosure. The foreclosure rate for the city of Dayton is higher at one (1) in every 886 homes, which is similar to Montgomery County. The following table summarizes the foreclosure rate for the city of Dayton, Montgomery County, the state of Ohio and the United States. Next is the type of foreclosure filings for the city of Dayton.

Source: RealtyTrac

Overall, based on sales volume, changes in sales prices, foreclosure rates and demographic trends, we anticipate the for-sale market to continue to experience a slow, but steady improvement in sales prices and volume over the next year. This is consistent with national trends.

For-Sale Housing Analysis

The following is a sample of newer homes recently sold in the Site PMA:

| Address (Year Built) | Bedrooms/ Baths | Square footage | Sales Price (Date Sold) | Sales Price/Square Foot |
|--|--------------------------|-------------------|----------------------------|-------------------------------|
| 655 Superior Avenue Dayton, OH 45402 (2011) | 3 Bedrooms/ 3.5 Baths | 1,820 | \$124,000 (4/16/2017) | \$68 |
| 1138 W. 1 st Street Dayton, OH 45402 (2005) | 4 Bedrooms/ 2 Baths | 1,606 | \$49,900 (3/20/2016) | \$31 |
| 510 N. Williams Street Dayton, OH 45402 (2007) | 3 Bedrooms/ 2 Baths | 1,404 | \$68,000 (6/08/2016) | \$48 |
| 144 Audubon Park Dayton, OH 45402 (2005) | 3 Bedrooms/ 2 Baths | 1,384 | \$85,500 (For Sale) | \$62 |

Based on our analysis of single-family homes in the Dayton Site PMA area over the past two years, the typical price for a modern home ranges between \$50,000 and \$125,000. There is a very limited supply of condominium developments within the Dayton Site PMA, as the majority of condominiums are located in the downtown area of Dayton. We do not believe there is a market for condominiums in the Site PMA at this time.

We have evaluated the estimated monthly cost of a typical for-sale home in the Dayton Site PMA, compared to the rents currently being achieved at the highest quality, modern apartments in the area. At an estimated interest rate of 5.0% and a 30-year term (and 95% LTV), the monthly mortgage for a \$61,688 home is \$430, including estimated taxes and insurance.

| Buy Versus Rent Analysis | | | | |
|--|----------|--|--|--|
| | Overall | | | |
| Median Home Price | \$61,688 | | | |
| Mortgaged Value = 95% of Median Home Price | \$58,604 | | | |
| Interest Rate - Bankrate.com | 5.0% | | | |
| Term | 30 | | | |
| Monthly Principal & Interest | \$315 | | | |
| Estimated Taxes & Insurance* | \$79 | | | |
| Estimated Private Mortgage Insurance** | \$37 | | | |
| Estimated Monthly Mortgage Payment | \$430 | | | |

^{*}Estimated at 25% of principal and interest

Some of the tenants at the subject sites will be able to afford the monthly payments required to own a home in the area. However, given the current lending practices, the number of tenants who would also be able to afford the down payment on such a home and have qualifying credit scores may be more minimal. Regardless, from an economic standpoint, the cost of renting a home in the area is similar to the estimated cost of homeownership.

Compared to other parts of Dayton, the western portion (Site PMA) has not experienced a significant amount of for-sale housing development in recent years. However, considering the Site PMA is a lower-income area with a higher share of renter-occupied housing, it is not surprising that there has been less new housing development. More housing development has occurred over the past 10 years among rental units, which were described in detail in Section VII. However, if the site neighborhoods can begin to experience redevelopment, demand will increase. This redevelopment will need to include housing, commercial/retail, employment and other community services opportunities.

As additional community services are developed in and around the subject sites (such as shopping, grocery, restaurants, entertainment, etc.), we anticipate that households will begin to further embrace the idea of homeownership in the western portion of Dayton. Demand for owner-occupied housing in developing neighborhoods or markets typically lags behind demand for less-permanent rental housing.

^{**}Estimated at 0.75% of mortgaged amount

IX. Support Analysis

Rental Demographic Support Analysis

Demand Factors – Rental Housing

There are primarily two sources of support for new rental housing. The first source is an increase in income-qualified households and the second source is replacement of functionally obsolete product. The first source of demand is generally easily quantifiable but presents challenges to accurately forecast. This is especially true in emerging or redeveloping markets, such as the west side of Dayton, in which demographic projections indicate a lack of growth over the next five years. However, some economic growth is occurring in the region and nearby job opportunities may present some potential support for new rental housing currently not available in the Site PMA (the west side of Dayton).

Furthermore, the changing housing preferences of the emerging millennial rental market and the emptynester baby-boomer market (moving from single-family homes to urban rentals) indicate market potential that current demographic projections have yet to consider. Although, considering the subject site locations are west of downtown, it is less likely that a significant amount of demographic support will come from this changing housing preference component than if the sites were located downtown. Regardless, some additional support will occur.

Another component of household growth that is difficult to quantify are households that are attracted to the area when additional living alternatives are made available to them. This growth variable considers those households who would never have considered a move to a location based on the current supply of existing living alternatives. A new development that attracts these households would likely spur additional demographic growth beyond projections. Given the unknown of future development possibilities within a respective geographic region, it is not surprising that this growth variable is virtually impossible to anticipate in forecasting demand for respective housing alternatives added to the market.

With regard to the west side of Dayton, there is a significant lack of modern, high-quality, market-rate apartment housing within the community. Given the demographic makeup of the market, it is evident that low- and moderate-income renter households dominate the Site PMA, as do affordable rental alternatives. However, based on the demographic characteristics of the market, renter households exist that could potentially afford rents at a modern, higher quality, market-rate rental project.

A new residential rental project in the site neighborhoods would likely not be completed until 2020. Therefore, the following demographic support analysis considers the demographic characteristics projected to exist in 2020. Considering a "step-up" support component, which considers those renter households already in the market paying rents near anticipated rents for new construction, we have assumed that households currently residing in conventional apartments within 15% of the potentially achievable market-rate rents at a new project in the site neighborhoods (detailed in Section VII of this housing needs assessment) would be willing to move and could potentially afford a new unit. Based on our field survey of rental housing, there are currently 373 renter households in conventional market-rate apartment units in the Site PMA that are currently paying rents within 15% of our suggested rents. This 15% factor is a reasonable "step-up" for those renter households to increase their rent.

The following table illustrates the distribution of renter households forecasted in 2020 by household size and income.

| Renter Household | Renter Households 2020 (Projected) | | | | | |
|------------------------|------------------------------------|----------|----------|----------|-----------|-------|
| Income Range | 1-Person | 2-Person | 3-Person | 4-Person | 5-Person+ | Total |
| Less Than \$10,000 | 1,585 | 674 | 439 | 199 | 353 | 3,250 |
| \$10,000 to \$19,999 | 1,034 | 466 | 426 | 232 | 108 | 2,266 |
| \$20,000 to \$29,999 | 453 | 442 | 166 | 164 | 127 | 1,352 |
| \$30,000 to \$39,999 | 283 | 93 | 92 | 66 | 61 | 595 |
| \$40,000 to \$49,999 | 230 | 151 | 88 | 60 | 59 | 588 |
| \$50,000 to \$59,999 | 81 | 66 | 27 | 32 | 25 | 231 |
| \$60,000 to \$74,999 | 59 | 42 | 32 | 21 | 54 | 208 |
| \$75,000 to \$99,999 | 79 | 43 | 14 | 57 | 22 | 215 |
| \$100,000 to \$124,999 | 44 | 31 | 11 | 30 | 20 | 136 |
| \$125,000 to \$149,999 | 23 | 11 | 10 | 7 | 5 | 55 |
| \$150,000 to \$199,999 | 15 | 5 | 2 | 4 | 7 | 32 |

Source: 2010 Census; Ribbon Demographics; ESRI; Urban Decision Group; VSI

Demographic information from this table is used in the following demographic support calculations.

Income-Eligible Renter Households (Market-Rate Analysis)

Based on the market characteristics and the lack of modern, market-rate rental housing options in the area, we have projected the demographic support potential for a modern, quality rental housing development.

Leasing industry standards among market-rate projects typically require households to have rent-to-income ratios of between 27% and 33%. For the purpose of this analysis, we have used the potentially achievable rents for a new construction, quality, market-rate multifamily rental community discussed in Section VII of this target market study to determine income-eligibility for various household sizes. Assuming the lowest gross rent unit at a new construction multifamily rental project would be approximately \$720 per month for a one-bedroom unit (which equates to a collected rent of around \$650 per month), the annual household expenditure would be \$8,640 (= 12 months X \$720 per month). Applying a rent-to-income ratio in the 27% to 33% range to the minimum annual household expenditure yields a minimum annual household income requirement of approximately \$30,000.

Although market-rate rental housing does not have maximum income limitations (as do the government-subsidized and Tax Credit rental programs), it is possible that renters with high household income could qualify for a new market-rate apartment in the site neighborhoods. However, based on our experience nationwide, it is less likely for households earning more than \$100,000 per year to choose to live in an area with limited quality, market-rate rental alternatives and low incomes. Typically, households earning more than \$100,000 either choose to live in higher income neighborhoods or opt for single-family or non-conventional rentals. Therefore, for the purpose of this analysis, we have not considered demographic support from renter households earning more than \$100,000 per year, as it is unlikely a significant amount of support for a rental project developed in the site neighborhood would originate from these households.

The following table summarizes the estimated income range for a market-rate rental project developed in the site neighborhoods within Dayton.

| | Market-Rate Income Range | | |
|---|--------------------------|------------|--|
| Project Type | Minimum | Maximum | |
| New Construction Multifamily Rental Project | \$30,000 | \$100,000* | |

^{*}Although no formal maximum income restrictions exist, we have limited the support analysis

Note that given the realistic target demographic base that would be attracted to a new, quality, marketrate rental development, we have limited the demographic support component to only <u>one-through</u> <u>three-person renter households</u> with eligible incomes. We have excluded larger renter households (of four persons or larger) from this analysis who likely do not meet the expected renter profile and are currently residing in single-family homes, duplexes, triplexes, etc.

We anticipate approximately 20% of support for a new project developed in the site neighborhood would likely originate from households currently living outside of the defined Site PMA and come to the area as the result of a job change, as well as from older adult homeowners who will convert to the maintenance-free lifestyle of renting a new unit at the subject sites. We have quantified this in the following demographic support analysis considering the size- and income-appropriate renter households projected to exist in the Site PMA in 2020. The site will primarily attract households with annual incomes of at least \$30,000.

| Market-Rate (2020) Demographic Support Analysis | | | | | |
|--|--|---------------------------------|---|--|--|
| Income Range | Number | 1-, 2- & 3-Person Households | Targeted Renters (\$30,000 to \$100,000) | | |
| Up to \$10,000 | 3,250 | 2,699 | - | | |
| \$10,000 to \$20,000 | 2,266 | 1,926 | - | | |
| \$20,000 to \$30,000 | 1,352 | 1,061 | - | | |
| \$30,000 to \$40,000 | 595 | 468 | 468 | | |
| \$40,000 to \$50,000 | 588 | 469 | 469 | | |
| \$50,000 to \$60,000 | 231 | 174 | 174 | | |
| \$60,000 to \$75,000 | 208 | 134 | 134 | | |
| \$75,000 to \$100,000 | 215 | 136 | 136 | | |
| \$100,000 to \$125,000 | 136 | 86 | - | | |
| \$125,000 to \$150,000 | 55 | 43 | - | | |
| \$150,000 to \$200,000 | 32 | 21 | - | | |
| \$200,000 and Higher | 41 | 29 | - | | |
| Total | 8,969 | 7,246 | 1,381 | | |
| Income- and S | Size-Appropriate R | Renters | 1,381 | | |
| 20% Additional Support | Component From | Homeowners and | + 345 | | |
| Renters/Households Cur | rently Outside the | Dayton Site PMA | (= 1,381 / 80% [- 1,381]) | | |

| - | Modern/Comparable Units* | | | | |
| - | (Existing and Pipeline) | | | | |
| · · | Total Demographic Support (2020) Potentially Supportable Rental Units Based on 5%-7.5% Capture Rate | | | | |

Source: Ribbon Demographics; ESRI; Urban Decision Group

^{*}Conventional apartment units with rents within 15% of the suggested/appropriate rents at a new project in the site neighborhoods

Applying an approximate 5% to 7.5% capture rate to the total demographic support component results in an estimated 70 to 100 market-rate rental units that could potentially be supported by 2020 within the site neighborhoods and the Site PMA. This support figure assumes new projects offering overall combined mixes of studio, one-, two- and potentially some three-bedroom units. Furthermore, this assumes a variety of unit designs, layouts and concepts, including at least a small share of townhouse-style units.

Applying the suggested potentially supportable share of units by bedroom type (found in Section VII of this target market study) to the total number of supportable units, results in the following distribution of potentially supportable rental units in the site neighborhoods by 2020.

| Potentially Supportable Market-Rate Units by Bedroom Type | | | | |
|---|-----------------------------|-------------------|--|--|
| Bedrooms | Suggested Share of Units | Supportable Units | | |
| Studio | <5% | <10 | | |
| One-Bedroom | 50% - 60% | 40 – 60 | | |
| Two-Bedroom | 30% - 40% | 25 – 40 | | |
| Three-Bedroom | 5% - 15% | 10 – 15 | | |
| | Total | ~ 70 – 100 | | |

The highest quality existing market-rate units in the Site PMA have high occupancy levels, indicating that ongoing market demand and demographic support currently exists. Given the size of existing market-rate apartment projects in the area, we anticipate that a new apartment project developed in the site neighborhoods would likely have around 70 to 100 units. Again, this assumes a variety of unit types, designs and layouts are available.

Income-Eligible Renter Households (Moderate-Income/Workforce Analysis)

In addition to evaluating the number of income-eligible renter households that currently exist in the Dayton PMA that can support market-rate rental housing, it is also important to evaluate the number of income-eligible renters that could support affordable moderate-income/workforce (Low-Income Housing Tax Credit) rental housing. Note the term "workforce" is used as a generic term to describe working individuals with moderate incomes that could potentially qualify for Tax Credit rental housing.

Based on our evaluation of the Dayton Site PMA and the supply of current rental housing and the character of the area, it was determined that despite a large supply of affordable rental housing options, significant pent-up market demand still exists for additional affordable rental housing in the area.

Under the Low-Income Housing Tax Credit (LIHTC) program, household eligibility is based on household income not exceeding the targeted percentage of Area Median Household Income (AMHI), depending upon household size. The Dayton, Ohio metropolitan statistical area (MSA) has a four-person median household income of \$63,600 for 2017.

For the purpose of this analysis, we have assume that households with incomes between 40% and 60% of AMHI would likely be attracted to a new affordable rental project. The following table summarizes the maximum allowable income by household size for the MSA at 40%, 50% and 60% of AMHI.

| 2017 HUD Income Limits Dayton, Ohio MSA | | | |
|--|----------|----------|----------|
| Household Size | 40% | 50% | 60% |
| One-Person | \$17,840 | \$22,300 | \$26,760 |
| Two-Person | \$20,360 | \$25,450 | \$30,540 |
| Three-Person | \$22,920 | \$28,650 | \$34,380 |
| Four-Person | \$25,440 | \$31,800 | \$38,160 |
| Five-Person | \$27,480 | \$34,350 | \$41,220 |
| 2017 Median Four-Person Household Income: \$63,600 | | | |

For the purpose of this analysis and based on the preceding table, a general occupancy affordable or "workforce" rental project developed in the site neighborhoods today (in 2017) would primarily appeal to renter households with incomes between \$17,840 and \$41,220. However, considering a new affordable rental project proposed this year would likely not be developed until 2020, we have assumed that households would need incomes between approximately \$20,000 and \$45,000 to qualify for Tax Credit housing. This is summarized in the following table.

| | Affordable General O Rental Inco | ccupancy |
|--|--|----------|
| Project Type | Minimum | Maximum |
| New Construction Tax Credit Rental Project | \$20,000 | \$45,000 |

Typically, due in part to the pent-up market demand for affordable rental housing options, Tax Credit rental communities offering a mix of one- through three-bedroom units often appeal to households with up to five persons. Therefore, the following demographic analysis evaluates the demographic support for affordable rental units in the Site PMA. Note that we have <u>not</u> considered an additional 20% support component from senior homeowners converting to rentership or support from outside the PMA. However, we have considered the 810 existing non-subsidized Tax Credit units in the following support analysis. Of the 810 existing, non-subsidized units, 473 will be beyond their 15-year compliance period in 2020. Therefore, we have considered the remaining 337 non-subsidized LIHTC units that will be operating under the Tax Credit program in 2020 in the following demographic support analysis.

| General Occupancy Tax Credit (2020) Demographic Support Analysis | | | | |
|---|--------------------------------------|--|--|--|
| Income Range | Number (All Household Sizes) | Targeted Renters (\$20,000 to \$45,000) | | |
| Up to \$10,000 | 3,250 | - | | |
| \$10,000 to \$20,000 | 2,266 | - | | |
| \$20,000 to \$30,000 | 1,352 | 1,352 | | |
| \$30,000 to \$40,000 | 595 | 595 | | |
| \$40,000 to \$50,000 | 588 | 294 | | |
| \$50,000 to \$60,000 | 231 | - | | |
| \$60,000 to \$75,000 | 208 | - | | |
| \$75,000 to \$100,000 | 215 | - | | |
| \$100,000 to \$125,000 | 136 | - | | |
| \$125,000 to \$150,000 | 55 | - | | |
| \$150,000 to \$200,000 | 32 | - | | |
| \$200,000 and Higher | 41 | - | | |
| Total | 8,969 | 2,241 | | |
| Income- and Size-A | Income- and Size-Appropriate Renters | | | |
| Modern/Comparable Tax Credit Units | | | | |
| (Existing and Pipeline) | | - 337 | | |
| Total Demographic Support (2020) | | = 1,904 | | |
| Potentially Supportable Affordable Tax Credit Rental Units Based on 7.5% to 10% Capture Rate | | = 140 to 190 units (1,904 X ~7.5% to ~10%) | | |

Source: Ribbon Demographics; ESRI; Urban Decision Group

Based on this analysis, demographic support exists for up to approximately 140 to 190 affordable Tax Credit rental units in the site neighborhood. This is not to infer that moderate-income rental housing is the highest and best use for the sites. However, it is an indication that significant market demand exists for moderate-income rental housing in Dayton and a viable portion of the site development could potentially include Tax Credit rental apartments.

It should also be noted that affordable rental housing development is typically a longer process than market-rate rental housing development, as there are additional applications, regulations and requirements impacting project development. Further, many of the eventual occupants of these units will be migrating from existing lower quality and lower rent options that will increase the vacancy rate for these units. Regardless, significant demographic support and market demand exist in the Dayton Site PMA for general occupancy and/or "workforce" Tax Credit rental units.

Income-Eligible Renter Households (Affordable Senior Analysis)

Similar to the preceding affordable moderate-income Tax Credit analysis, we have also conducted an affordable, senior-oriented (age 55 and older) Tax Credit analysis. This evaluation of the number of potentially supportable senior renter households was conducted due to the fact that the area appears to be a favorable location for this type of rental housing. Given the income requirements, and the fact that senior rental housing units typically appeal to only one- and two-person senior households, we have evaluated the total number of income-eligible (\$20,000 to \$32,000) senior (age 55 and older) renter households in the Dayton PMA. This is illustrated in the following table.

| | Affordable (Tax Credit) Senior Age 55+ Rental Income Range | |
|-------------------------------|--|----------|
| Project Type | Minimum Maximum | |
| New Construction Senior (55+) | | |
| Tax Credit Rental Project | \$20,000 | \$32,000 |

Typically, senior-restricted Tax Credit projects can achieve higher capture rates than general occupancy projects. Due to the lack of senior-restricted LITHC rental options in the Site PMA, we have applied a 15% senior capture rate to the demographic support base to project the number of affordable senior units that can be supported. Unlike the general occupancy/"workforce" demographic support calculations, we have assumed that 20% of support for a senior-restricted Tax Credit rental project would come from senior homeowners and others outside of the PMA.

Note that of the 288 existing non-subsidized senior-restricted LIHTC units in the Site PMA, 214 will be outside of their initial 15-year compliance period in 2020. The remaining 74 non-subsidized, senior-restricted LIHTC units that will be operating under the Tax Credit program requirements in 2020 have been considered in the following senior demographic support analysis.

| Senior (Age 55+) Tax Credit (2020) Demographic Support Analysis | | | |
|--|----------------------------------|-----------------------------|---|
| Income Range | Number | 1- & 2-Person Households | Targeted Senior (55+) Renters (\$20,000 to \$32,000) |
| Up to \$10,000 | 986 | 902 | - |
| \$10,000 to \$20,000 | 861 | 727 | - |
| \$20,000 to \$30,000 | 415 | 341 | 341 |
| \$30,000 to \$40,000 | 239 | 188 | 38 |
| \$40,000 to \$50,000 | 171 | 132 | - |
| \$50,000 to \$60,000 | 113 | 73 | - |
| \$60,000 to \$75,000 | 100 | 70 | - |
| \$75,000 to \$100,000 | 113 | 75 | - |

| Total Demo | Total Demographic Support (2020) | | |
| - | portable Senior (| | = 50 to 70 units |
| Affordable Rental Units Based on ~15% Capture Rate | | (400 X ~12.5% to ~17.5%) | |

Source: Ribbon Demographics; ESRI; Urban Decision Group

Based on this analysis, demographic support exists for up approximately 50 to 70 affordable senior-restricted (age 55 and older) conventional Tax Credit rental units in the site neighborhoods. Despite the current supply of LIHTC senior rental options, the demographic support and market demand exist for these affordable units tailored to the specific needs of moderate-income seniors.

Income-Eligible Renter Households (Low-Income Government-Subsidized Analysis)

While households can technically qualify for residency in government-subsidized housing with incomes up to 50% of AMHI, we have used the maximum allowable 40% AMHI income limit in an effort to not duplicate demographic support considered in the preceding Tax Credit support evaluation. Considering a new affordable rental project proposed this year would likely not be developed until 2020, we have assumed that households that would qualify for government-subsidized housing would have incomes below \$20,000, which is summarized in the following table.

| | Low-Income General C Rental Inco | ccupancy |
|--|--|----------|
| Project Type | Minimum | Maximum |
| New Construction Subsidized Rental Project | \$0 | \$20,000 |

We have considered the 2,354 existing government-subsidized units in the following support analysis.

| General | General Occupancy Government-Subsidized (2020) Demographic Support Analysis | | | |
|-----------------------------|--|--------------------------------------|--|--|
| Income Range | Number (All Household Sizes) | Targeted Renters (Under \$20,000) | | |
| Up to \$10,000 | 3,250 | 3,250 | | |
| \$10,000 to \$20,000 | 2,266 | 2,266 | | |
| \$20,000 to \$30,000 | 1,352 | - | | |
| \$30,000 to \$40,000 | 595 | - | | |
| \$40,000 to \$50,000 | 588 | - | | |
| \$50,000 to \$60,000 | 231 | - | | |
| \$60,000 to \$75,000 | 208 | - | | |
| \$75,000 to \$100,000 | 215 | - | | |
| \$100,000 to \$125,000 | 136 | - | | |
| \$125,000 to \$150,000 | 55 | - | | |
| \$150,000 to \$200,000 | 32 | - | | |
| \$200,000 and Higher | 41 | - | | |

| Comparable Subsidized Units | | | | |
| (Existing and Pipeline) | | - 2,354 | | |
| Total Demograph | Total Demographic Support (2020) | | | |
| Potentially Supportable | Low-Income Subsidized | = 240 to 320 units | | |
| Rental Units Based on 7. | Rental Units Based on 7.5% to 10% Capture Rate | | | |

Source: Ribbon Demographics; ESRI; Urban Decision Group

Based on this analysis, demographic support exists for up to approximately 240 to 320 new government-subsidized rental units in the Dayton Site PMA. This is a significant amount of needed low-income rental units. Currently, the surveyed government-subsidized units have an overall occupancy rate of 99.9%, clearly indicating significant pent-up demand for subsidized housing options. Note that Desoto Bass Courts and Hilltop Homes currently have a combined 504+ subsidized rental units. Redevelopment of these units would not help to alleviate the pent-up market demand for low-income rental housing, as redevelopment would simply replace existing units. Rather, significant market demand and demographic support exist in the Dayton Site PMA for new subsidized rental housing development.

Income-Eligible Renter Households (Low-Income Government-Subsidized Senior Analysis)

Similar to the preceding affordable low-income subsidized analysis, we have also conducted an affordable, senior-oriented (age 55 and older) subsidized analysis. This evaluation of the number of potentially supportable senior renter households was conducted due to the fact that the area appears to be a favorable location for this type of rental housing. Given the income requirements, and the fact that senior rental housing units typically appeal to only one- and two-person senior households, we have evaluated the total number of senior (age 55 and older) renter households with incomes below \$20,000 in the Dayton PMA. This is illustrated in the following table.

| | Low-Income (Subsidized) Senior Age 55+ | |
|--------------------------------------|--|----------|
| | Rental Income Range | |
| Project Type | Minimum | Maximum |
| New Construction Senior (55+) | | |
| Government-Subsidized Rental Project | \$0 | \$20,000 |

We have considered the 546 existing, senior-restricted, government-subsidized units in the following support analysis.

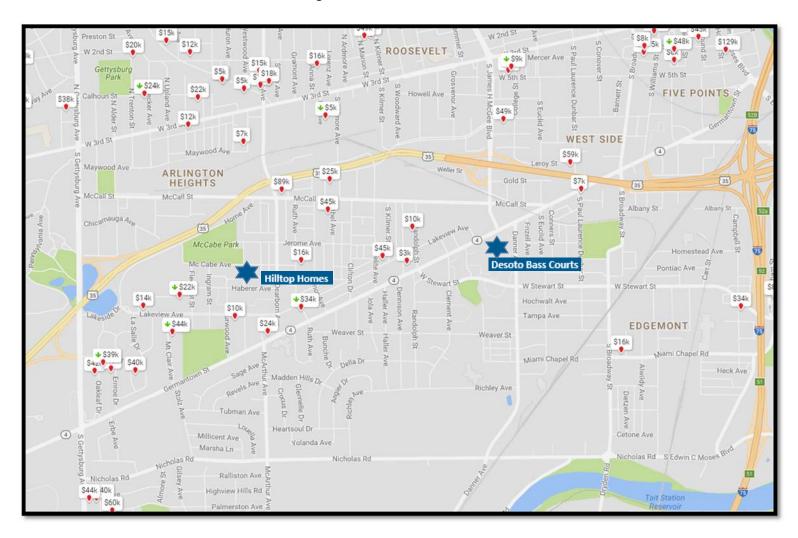

| Senior (Age 55+) Tax Credit (2020) Demographic Support Analysis | | | |
|--|--------------------|-----------------------------|---|
| Income Range | Number | 1- & 2-Person Households | Targeted Senior (55+) Renters (Less Than \$20,000) |
| Up to \$10,000 | 986 | 902 | 902 |
| \$10,000 to \$20,000 | 861 | 727 | 727 |
| \$20,000 to \$30,000 | 415 | 341 | - |
| \$30,000 to \$40,000 | 239 | 188 | - |
| \$40,000 to \$50,000 | 171 | 132 | - |
| \$50,000 to \$60,000 | 113 | 73 | - |
| \$60,000 to \$75,000 | 100 | 70 | - |
| \$75,000 to \$100,000 | 113 | 75 | - |
| \$100,000 to \$125,000 | 60 | 42 | - |
| \$125,000 to \$150,000 | 23 | 17 | - |
| \$150,000 to \$200,000 | 9 | 5 | - |
| \$200,000 and Higher | 19 | 12 | - |
| Total | 3,110 | 2,585 | 1,629 |
| Income-, Age- ar | nd Size-Appropriat | te Renters | 1,629 |
| 20% Additional Support Com | nponent From Ho | meowners and Renter | + 407 |
| Households Current | ly Outside the Day | ton Site PMA | (= 1,629 / 80% [- 1,629]) |
| Demographic Support (2020) | | | = 2,036 |
| Comparable Subsidized Units | | | |
| (Existing and Pipeline) | | | - 546 |
| Total Demographic Support (2020) | | = 1,490 | |
| Potentially Sup | portable Senior (| Age 55+) | = 180 to 260 units |
| Subsidized Rental Units Based on ~15% Capture Rate | | (1,490 X ~12.5% to ~17.5%) | |

Source: Ribbon Demographics; ESRI; Urban Decision Group

Based on this analysis, demographic support exists for up approximately 180 to 260 affordable senior-restricted (age 55 and older) government-subsidized rental units in the site neighborhoods. Despite the current supply of subsidized senior rental options, the demographic support and market demand exist for these affordable units tailored to the specific needs of low-income seniors.

For-Sale Demographic Support Analysis

The for-sale housing stock is limited in the Site PMA compared to the rest of Dayton. It is not surprising that there has not been much new for-sale housing development in recent years. The majority of for-sale housing near the subject sites involves single-family homes typically built more than 50 years ago, with asking prices under \$60,000 per home. Below is a snippet of the current for-sale home listings from realtor.com in and around the site neighborhoods.

The challenge with redeveloping low-income neighborhoods is the economic challenge of the cost to build a new home, compared to the achievable sales price of that new home. Based on our research, the lowest cost to build a three-bedroom/1.5-bath single-family home with approximately 1,600 square feet of living space would be approximately \$160,000 and earn a reasonable return to the developer. It is unlikely that buyers would be willing to pay this price, which is nearly three times higher than most for-sale options in the area.

For the purpose of analyzing the market, we have made some assumptions for this for-sale demographic support analysis. First, since a Choice Neighborhood grant has been awarded, it is likely that any for-sale homes that are developed will be "affordable" in some way. Affordable is generally defined as those incomes at 80% to 120% of the Area Median Household Income adjusted for household size.

| 2017 HUD Income Limits Dayton, Ohio MSA | | | |
|--|----------|----------|--|
| Household Size | 80% | 120% | |
| One-Person | \$35,680 | \$53,520 | |
| Two-Person | \$40,720 | \$61,080 | |
| Three-Person | \$45,840 | \$68,760 | |
| Four-Person | \$50,880 | \$76,320 | |
| Five-Person | \$54,960 | \$82,440 | |
| Six-Person | \$59,040 | \$88,560 | |
| 2017 Median Four-Person Household Income: \$63,600 | | | |

Given a likely for-sale product type would involve three-bedroom homes, we assume a family of at least three persons will be the target market. Thus, a three-person median household income at 80% of AMHI (\$45,840 per year) generates a base price of the home of approximately \$135,000, assuming a 5% down payment, a 5% fixed interest rate on a 30-year mortgage and a 25% income-to-house payment ratio. For the purpose of this analysis, we have evaluated the number of income-eligible households (both owners and renters) that could afford a home priced between \$135,000 and \$160,000. Note that we have evaluated the income-eligible households under the age of 65, as most seniors are shedding homeownership as they grow older.

Based on the maximum allowable five-person household income at 120% of AMHI, we have evaluated households under the age of 65 with incomes no higher than \$90,000 since a new development will likely not be available until around 2020.

The following table summarizes the estimated income range for a market-rate for-sale project developed in the site neighborhoods within Dayton.

| | For-Sale Income Range | |
|-----------------------------------|-----------------------|-----------|
| Project Type | Minimum | Maximum |
| New Construction For-Sale Product | \$45,000 | \$90,000* |

^{*}Although no formal maximum income restrictions exist, we have limited the support analysis

The demographic support calculations for age- and income-eligible households who may be interested in purchasing a new home in the Site PMA is found in the table on the following page.

| For-Sale (2020) Demographic Support Analysis (Under Age 65) | | | | |
|---|--|---|--|--|
| Income Range | Number of Households (All Household Sizes) | Targeted Buyers (\$45,000 to \$90,000) | | |
| Up to \$10,000 | 3,515 | - | | |
| \$10,000 to \$20,000 | 2,475 | - | | |
| \$20,000 to \$30,000 | 1,876 | - | | |
| \$30,000 to \$40,000 | 1,213 | - | | |
| \$40,000 to \$50,000 | 1,121 | 561 | | |
| \$50,000 to \$60,000 | 670 | 670 | | |
| \$60,000 to \$75,000 | 573 | 573 | | |
| \$75,000 to \$100,000 | 583 | 350 | | |
| \$100,000 to \$125,000 | 283 | - | | |
| \$125,000 to \$150,000 | 120 | - | | |
| \$150,000 to \$200,000 | 49 | - | | |
| \$200,000 and Higher | 64 | - | | |
| Total | 12,540 | 2,154 | | |
| Income- and Size-Appropriate | Income- and Size-Appropriate Households (Under Age 65) | | | |
| Potentially Supportable For-Sale Units Based on 1% to 2% Capture Rate | | = 20 to 40 units (2,154 X ~1% to ~2%) | | |

Source: Ribbon Demographics; ESRI; Urban Decision Group

Assuming a for-sale product is made available, there appears to be demographic support for approximately 20 to 40 for-sale units in the Site PMA at the proposed subject sites. This assumes a price-point of \$135,000 to \$160,000 for these homes. However, considering prices of homes that are currently selling in the site neighborhoods, \$135,000 to \$160,000 home price-points are considered to be aggressive and may not be achievable, despite demographic support among households who could potentially afford this price of home.

Considering the market characteristics, it is likely that for-sale housing developed at one or both of the subject sites would need to be priced below \$100,000 to attract buyers. First-time homebuyer incentives, other local grants or forgivable loans could help to reduce the effective cost of a home in these neighborhoods.

These neighborhoods may be advantageous locations to consider developing a modern, high-quality manufacturing housing alternative. Although manufactured housing options are typically envisioned as "trailer parks" that have traditionally been an affordable option for lower-income households, new trends in fabrication and construction of manufactured homes have lent a new dimension to the often-stereotyped housing type. Higher quality, multi-section homes are being used more often as infill units among site-built housing and provide an affordable second home option in resort areas. Development of the non-mobile, upscale manufactured housing is currently outpacing development of the single-section "mobile" home housing on a national scale in resort and permanent communities alike. The more upscale "non-mobile" manufactured housing is increasingly being combined with site-built condominiums, patio homes, and single-family homes, as additions to existing communities, or as infill to existing neighborhoods. This development strategy could help to provide a more affordable for-sale housing opportunity to the site neighborhoods, which have a comparably lower household income base than the city of Dayton as a whole.

A reduction in price of a for-sale option to \$100,000 would widen the potential window of affordability to include households with incomes between approximately \$35,000 and \$90,000. This would result in a potential demographic support base of 2,76 puseholds under age 65 and the potential for approximately to 55 for-sale units. Obviously, achievability of a development to sell these owner-occupied units would be dependent upon numerous factors, including an appealing home design, sufficient unit sizes and bathrooms and the neighborhood in which the homes are built. However, demographic support exists for for-sale/owner-occupied housing development in the Dayton Site PMA. Based on the demographic statistics, the greatest support base and market demand exist for affordable rental housing; however, some demand and demographic support does exist for owner-occupied/for-sale housing development.

Overall Demographic Support Conclusions and Market Conclusions

The following is a summary of the demographic support calculations for additional housing development in the site neighborhoods and the west Dayton area. Note that these conclusions are for additional housing units. The replacement of Hilltop Homes and Desoto Bass Courts is not included in these conclusions. Those two projects can be redeveloped and replaced. In addition to those two projects, additional housing units that can be supported in the market are summarized in the following table.

| Potentially Supportable New Housing Units – 2020 Conclusions | | | | | | |
|--|----------------------|--|--|--|--|--|
| Type of Housing | Supportable Units | | | | | |
| Market-Rate (Family/Senior) Apartments | ~ 70 – 100 Units | | | | | |
| Affordable (Tax Credit) Apartments | ~ 140 – 190 Units | | | | | |
| Affordable (Tax Credit) Senior-Restricted (Age 55+) Apartments | ~ 50 – 70 Units | | | | | |
| Low-Income (Subsidized) Apartments | ~ 240 – 320 Units | | | | | |
| Low-Income (Subsidized) Senior-Restricted (Age 55+) | ~ 180 – 260 Units | | | | | |
| For-Sale* | ~ 20 – 5 nits | | | | | |

^{*}Assumes a sales price discount below cost of development

Up to approximately 70 to 100 market-rate units could potentially be supported by 2020 in the site neighborhoods and surrounding west side of Dayton. These units would likely need to be absorbed over a three-year period. This conclusion assumes that a number of project concepts are developed that offer a variety of unit types, including overall combined mixes of studio, one-, two- and some three-bedroom units. Furthermore, this assumes a variety of unit designs and layouts, including townhouse-style units as well as garden-style walk-up units.

Overall, strong demographic support and market demand exist for additional housing development. Statistically, greater demographic support exists for rental housing, as opposed to for-sale (primary residence) housing. However, as the site neighborhoods are redeveloped and residential land uses increase in the area, we anticipate additional community services, restaurants, shopping options, etc. could also be developed. Once the site neighborhood as a whole begins to redevelop with greater choice of resident services, additional for-sale/owner-occupied housing could be supported.

Incentives should be considered to assist for-sale/owner-occupied housing development, such as property tax abatement for a specific period of time (10 or 15 years, for example) for any housing unit developed within a specific area, such as the site area. This strategy has been successful in helping to increase for-sale housing development in other cities across the country. In addition, down payment assistance incentives for first-time homebuyers, forgivable loans or other specific demographic cohorts has also been a successful strategy to increase for-sale home interest in developing areas.

Overall, the site neighborhoods and west Dayton area have market demand and demographic support for additional housing development and re-development.

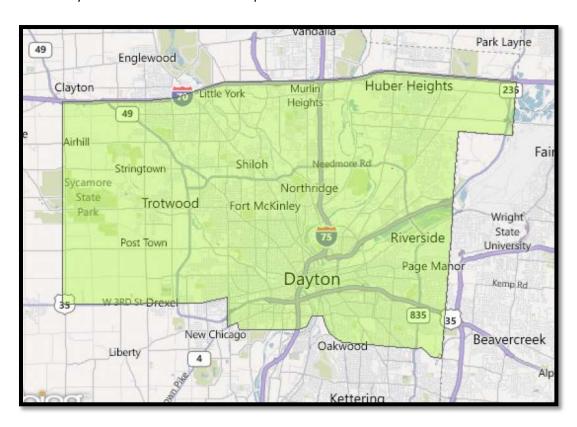

X. Commercial/Retail Analysis

Commercial/Retail Overview

For the purpose of this market study and feasibility analysis, an evaluation of commercial/retail opportunities have been conducted. The site neighborhoods would benefit from the development of both housing and commercial/retail space. As more community services and retail opportunities are offered, more households are likely to consider the site neighborhoods as appealing locations to live.

We have evaluated demographic and economic trends, analyzed current commercial/retail listings and signed leases, and reviewed commercial/retail reports provided by Reis. Reis is recognized as the nation's most trusted source for property and market intelligence, including vacancy rates, rent levels, cap rates, new construction rent comparables, sales comparables, valuation estimates and capital market trends across eight major commercial real estate sectors.

Reis provides submarket data for the Dayton metropolitan area. The subject sites are located within the Reis "Central Dayton" submarket. See the map below.

Note the Reis "Central Dayton" submarket does not coincide directly with the Dayton Site PMA established in this market study and feasibility analysis, as it encompasses a larger geographic area. However, this Reis submarket is the smallest geographic area in which overall retail market data is available.

The following is a summary of the current submarket vacancy details provided by Reis for the "Central Dayton" submarket.

Period ending 03/31/17

As illustrated in the preceding tables, the "Central Dayton" submarket has much higher commercial vacancy rates than the entire Dayton metropolitan area, the Midwest and the United States. Based on the Reis report, which can be found in its entirety in Addendum B of this market analysis and feasibility study, the older commercial properties (those built prior to 1990) are experiencing notably higher vacancy rates than the most modern commercial properties.

The following is a summary of the submarket supply and rent change provided by Reis for the "Central Dayton" submarket.

The inventory, in terms of square footage, has remained unchanged since 2012, while the vacancy rate has declined from 22.2% to 20.3% between 2012 and first quarter 2017. Additionally, the effective rent has increased from \$7.16 per square foot in 2012 to \$7.70 per square foot in 2017, a 7.5% increase.

The following tables and charts illustrate the Reis projections and forecast for vacancy rates through 2021. These projections compare the "Central Dayton" submarket to the overall Dayton metropolitan area, the Midwest and the United States.

As illustrated in the preceding Reis information, "Central Dayton" submarket vacancies are anticipated to remain more than double the national average through the next five years. The high vacancy rates among commercial/retail space in the "Central Dayton" submarket is due in part to the age and quality of the existing supply. This is especially true of the subject site neighborhoods.

The following tables illustrate the Reis projections and forecast for supply and rent change through 2021 for the "Central Dayton" submarket.

As illustrated in the preceding tables, commercial inventory is projected to increase 1.5% between 2017 and 2021. Over the same time period the overall vacancy rate is projected to decline from 23.5% to 18.2%. The projected effective rent will increase from \$8.39 per square foot in 2017 to \$8.66 per square foot in 2021, an increase of 2.6%.

VSI has provided a Retail MarketPlace Profile within a five-minute driving radius from the subject sites, which illustrates retail demand, retail supply and the retail gap, as well as a leakage/surplus factor for each industry group. This analysis illustrates the retail expenditures and potential retail demand based on the leakage factor determined for each retail industry group. This Retail MarketPlace Profile can be found on the following pages.

The following map illustrates the geographic location of the five-minute drive-time.

Data Note: Supply (retail sales) estimates sales to consumers by establishments. Sales to businesses are excluded. Demand (retail potential) estimates the expected amount spent by consumers at retail establishments. Supply and demand estimates are in current dollars. The Leakage/Surplus Factor presents a snapshot of retail opportunity. This is a measure of the relationship between supply and demand that ranges from +100 (total leakage) to -100 (total surplus). A positive value represents 'leakage' of retail opportunity outside the trade area. A negative value represents a surplus of retail sales, a market where customers are drawn in from outside the trade area. The Retail Gap represents the difference between Retail Potential and Retail Sales. Esri uses the North American Industry Classification System (NAICS) to classify businesses by their primary type of economic activity. Retail establishments are classified into 27 industry groups in the Retail Trade sector, as well as four industry groups within the Food Services & Drinking Establishments subsector. For more information on the Retail MarketPlace data, please click the link below to view the Methodology Statement. http://www.esri.com/data/esri_data/methodology-statements

Leakage/Surplus Factor by Industry Subsector

Leakage/Surplus Factor by Industry Group

Source: Esri and Infogroup. Retail MarketPlace 2016 Release 2. Copyright 2016 Infogroup, Inc. All rights reserved.

As illustrated in the preceding leakage/surplus analysis, there is a significant surplus of gas stations within the site neighborhoods while there is leakage for most other retail industry group options within five minutes of the site. This is due to the fact that as retailing patterns have changed over the past decade, retail stores have tended to contract within the Dayton Site PMA. The Westown Shopping Center is the only true concentration of retail within the PMA, which is anchored by a grocery store, pharmacy and a dollar store. Other concentration of retail can be founded along Salem Avenue north of the PMA and specialty retail is found in downtown Dayton east of the PMA.

Sectors with the highest retail gap include grocery stores, health and personal care, general merchandise and food services. Additional establishments in these sectors located within the sites' neighborhoods will have the most benefit to area residents.

XI. Qualifications

The Company

Vogt Strategic Insights is a real estate research firm established to provide accurate and insightful market forecasts for a broad range client base. The principal of the firm, Robert Vogt, has more than 35 years of real estate market feasibility experience throughout the United States.

Serving real estate developers, syndicators, lenders, state housing finance agencies and the U.S. Department of Housing and Urban Development (HUD), the firm provides market feasibility studies for affordable housing, market-rate apartments, condominiums, senior housing, student housing and single-family developments.

The Staff

Robert Vogt has conducted and reviewed more than 7,000 market analyses over the past 35 years for market-rate and Low-Income Housing Tax Credit apartments as well as studies for single-family, golf course/residential, office, retail and elderly housing throughout the United States. Mr. Vogt is a founding member and the past chairman of the National Council of Housing Market Analysts (formerly known as the National Council of Affordable Housing Market Analysts), a group formed to bring standards and professional practices to market feasibility. He is a frequent speaker at many real estate and state housing conferences. Mr. Vogt has a bachelor's degree in finance, real estate and urban land economics from The Ohio State University.

Andrew W. Mazak has more than 14 years of experience in the real estate market research field. He has personally written more than 1,200 market feasibility studies in numerous markets throughout the United States, Canada and Puerto Rico. These studies include the analysis of Low-Income Housing Tax Credit, market-rate and government-subsidized apartments, student housing developments, farmworker housing projects, condominium communities, single-family subdivisions and senior-living developments, as well as overall community, city, county and statewide housing needs assessments. Mr. Mazak has a bachelor's degree in Business Management and Marketing from Capital University in Columbus, Ohio.

Nathan Young has more than a decade of experience in the real estate profession. He has conducted field research and written market studies in hundreds of rural and urban markets throughout the United States. Mr. Young's real estate experience includes analysis of apartment (subsidized, Tax Credit and market-rate), senior housing (i.e. nursing homes, assisted living, etc.), student housing, condominium, retail, office, self-storage facilities and repositioning of assets to optimize feasibility. Mr. Young has experience in working with the U.S. Department of Housing and Urban Development and has FHA LEAN program training. Mr. Young has a bachelor's degree in Engineering (Civil) from The Ohio State University and a Master of Business Administration from Ohio Dominican University.

Jim Beery has more than 25 years' experience in the real estate market feasibility profession. He has written market studies for a variety of development projects, including multifamily apartments (market-rate, affordable housing, and government-subsidized), residential condominiums, hotels, office developments, retail centers, recreational facilities, commercial developments, single-family developments and assisted living properties for older adults. Other consulting assignments include numerous community redevelopment and commercial revitalization projects. Mr. Beery has attended the HUD MAP Training for industry partners and received continuing education certification from the Lender Qualification and Monitoring Division. Mr. Beery has a bachelor's degree in Business Administration (Finance major) from The Ohio State University.

Jennifer Tristano has been involved in the production of more than 2,000 market feasibility studies during the last several years. While working as an editor, Ms. Tristano became well acquainted with the market study guidelines and requirements of state finance agencies as well as various U.S. Department of Housing and Urban Development programs. In addition, Ms. Tristano has researched market conditions for a variety of project types, including apartments (Tax Credit, subsidized and market-rate), senior residential care, student housing and condominium communities. Ms. Tristano graduated *summa cum laude* from The Ohio State University.

Jimmy Beery has analyzed real estate markets in more than 35 states over the past seven years. In this time, Mr. Beery has conducted a broad range of studies, including Low-Income Housing Tax Credit apartments, luxury market-rate apartments, student housing analysis, rent comparability studies, condominium and single-family home communities, mixed-use developments, lodging, retail and commercial space. Mr. Beery has a bachelor's degree in Human Ecology from The Ohio State University.

Chuck Ewing has analyzed over 200 real estate markets in over 35 states since 2009. Mr. Ewing has conducted a broad range of studies, including Low-Income Housing Tax Credit, homeless supportive housing analysis, student housing analysis, rent comparability studies, condominium and single-family home communities, mixed-use developments, lodging, citywide analysis and workforce housing analysis. Mr. Ewing has a bachelor's degree in Economics from The Ohio State University.

Jarrett Jordan has worked in the real estate market research industry since 2013 and has analyzed nearly 100 real estate markets in 28 states, as well as in the District of Columbia and Puerto Rico. Mr. Jordan has experience evaluating Low-Income Housing Tax Credit apartments, market-rate apartments, subsidized housing, student housing, senior housing, homeless supportive housing, mixed-use developments and commercial space. Mr. Jordan has a Bachelor of Science Degree in Finance from The University of Tennessee.

Tom Mowery has more than 30 years of experience in the housing industry in both the public and private sectors. Prior to joining VSI, Mr. Mowery served as a Vice President at JPMorgan Chase where he analyzed and reviewed market risk and advised on economic results and long-term viability for the national Underwriting effort within Community Development Banking (CDB). He supported \$2.5 billion within four regional portfolios of real estate properties, primarily affordable multifamily. Mr. Mowery has also worked for Arizona Department of Housing and The Danter Company. He is skilled at Market Risk Analysis, Market Study/Appraisal Review, Portfolio Monitoring, Pipeline Management, Affordable/Market-Rate Housing, Underwriting, Community Development and Market Development. Mr. Mowery holds a bachelor's degree in Business Administration and Accounting from Ohio Dominican University.

Field Staff – Vogt Strategic Insights maintains a field staff of professionals experienced at collecting critical on-site real estate data. Each member has been fully trained to evaluate site attributes, area competitors, market trends, economic characteristics and a wide range of issues influencing the viability of real estate development.

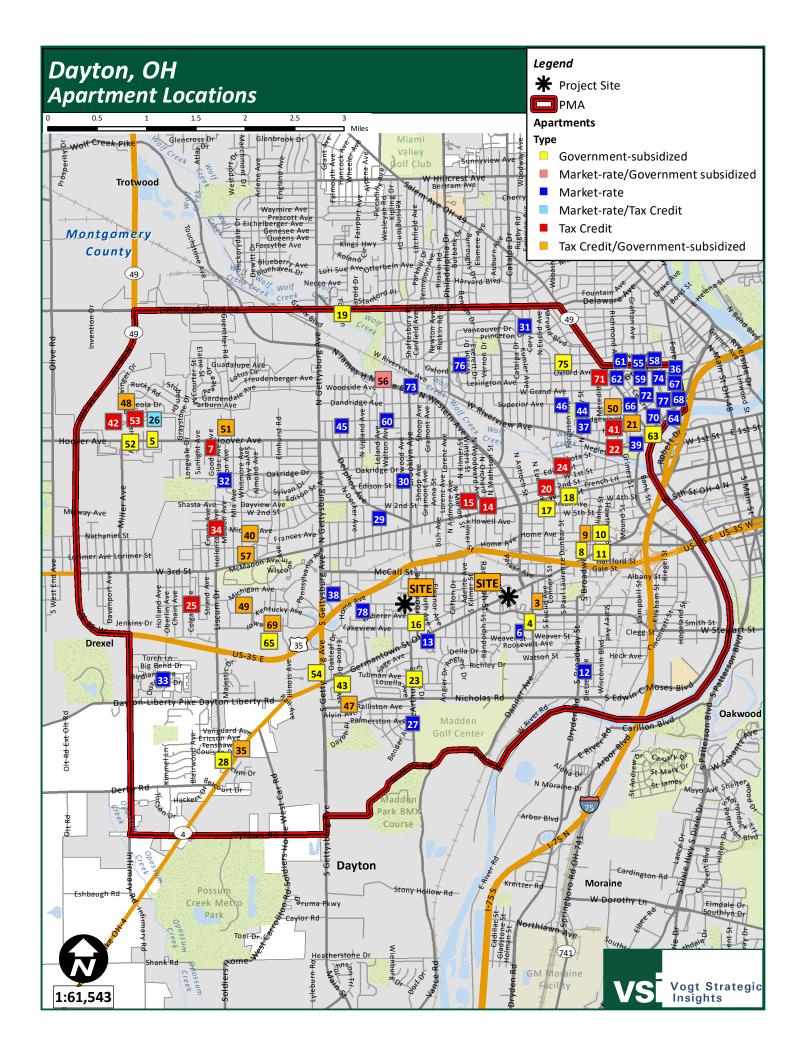

A. Field Survey of Conventional Rentals (Site PMA)

The following section is a field survey of conventional rental properties identified through a variety of sources, including area apartment guides, government agencies and our own field inspection. The intent of the field survey is to evaluate the overall strength of the existing rental market, identify trends impacting future development and to identify those properties considered most comparable to the subject site. The field survey has been organized by project type; properties are color coded to reflect this and designated as market-rate, Tax Credit, government-subsidized or a combination of these three property types. The field survey is assembled as follows:

- A color-coded map indicating each property surveyed and the project type followed by a list of properties surveyed.
- Distribution of non-subsidized and subsidized units and vacancies in properties surveyed.
- Properties surveyed by name, address, telephone number, project type, key amenities, year built
 or renovated (if applicable), number of floors, total units, occupancy rate, quality rating, rent
 incentives and Tax Credit designation. Housing Choice Vouchers and Rental Assistance are also
 noted here.
- A rent distribution is provided for all market-rate and non-subsidized Tax Credit units by unit type and bedroom.
- Calculations of rent per square foot (all utilities are adjusted to reflect similar utility responsibility). Data is summarized by unit type.
- The distribution of market-rate and non-subsidized Tax Credit units are provided by quality rating, unit type and number of bedrooms. The median rent by quality ratings and bedrooms is also reported. Note that rents are adjusted to reflect common utility responsibility.
- An analysis of units added to the area by project construction date and, when applicable, by year
 of renovation.
- Aggregate data and distributions for all non-subsidized properties are provided for appliances, unit amenities and project amenities.
- Aggregation of projects by utility responsibility (market-rate and non-subsidized Tax Credit only).
- A utility allowance worksheet.

Note that other than the property listing following the map, data is organized by project types. Market-rate properties (blue designation) are first followed by variations of market-rate and Tax Credit properties. Non-government subsidized Tax Credit properties are red and government-subsidized properties are yellow. See the color codes at the bottom of each page for specific project types.

About Reis

Reis provides commercial real estate market information and analytical tools to real estate professionals through its Reis Services subsidiary. Reis Services, including its predecessors, was founded in 1980. Reis maintains a proprietary database containing detailed information on commercial properties in metropolitan markets and neighborhoods throughout the U.S. The database contains information on apartment, office, retail, warehouse/distribution, flex/research & development, self storage, seniors housing properties and affordable housing, and is used by real estate investors, lenders and other professionals to make informed buying, selling and financing decisions. In addition, Reis data is used by debt and equity investors to assess, quantify and manage the risks of default and loss associated with individual mortgages, properties, portfolios and real estate backed securities. Reis currently provides its information services to many of the nation's leading lending institutions, equity investors, brokers and appraisers.
